ICS 204 - Assignment List

Incident:	MV Athos I	**Branch:**	Near/On Shore Recovery Branch
Period:	Period 7 (12/3/2004 06:00 - 12/4/2004 06:00)	**Division/Group:**	PA-7 Division
Prepared By Signature:		**Task Force:**	
Approved By Signature:			

Operations Personnel

Title	Person	Radio	Phone	Pager
Operations Section Chief	Theo Camlin		425-501-5430	
Operations Section Deputy Recovery	Nelson Fetgatter		713-342-0460	
Branch Director	Chris Gregory		714-273-8036	
Supervisor	Steve Smith		504-382-8351	
Safety Officer	Ed Doyle/Archie Greshan		302-293-8959/8960	

Resources Required

Area of Operation	Resource Type	Description	Quantity	Size
PA-7 Division	Barge: Inland	Deck Barge	1 each	
PA-7 Division	Equipment: Heavy	Bobcat	1 each	
PA-7 Division	Manpower: Responder	Laborers	100 each	
PA-7 Division	Manpower: Supervisor	Supervisor	5 each	
PA-7 Division	Manpower: Supervisor	NSF Supervisor	2 each	
PA-7 Division	Pressure Washers / Wash	Wash pump/hose assem	10 each	
PA-7 Division	Vehicle	ATV's w/ Trailers	2 each	
PA-7 Division	Vessel	Push Boat	1 each	
PA-7 Division	Vessel	NSF Boat	1 each	

Assignments

-Manually recover oil and oil covered debris
-Employ and assess effectiveness of various techniques:
  -Squiggies
  -Snares
  -Low pressure flushing
  -Vacuum transfer

Special Instructions for Division / Group

Conduct boom tending operations 24x7.
Conduct beach pre-clean up by moving debris above high water mark in potential impact areas.

Special Environmental Considerations

Cut no wetland vegetation without state approval. Do not walk through or work in Mud Flats. Report oiled wildlife to situation unit.

Special Site-Specific Safety Considerations

Review site safety plan. Be aware of slips, trips and falls. Always wear proper PPE. Follow decon procedures in Site Safety Plan.

Additional Information

Report situation status to the Situation Unit Leader each day at 0900, 1300, and 1600 hrs. 267-765-3446/3448

© 1997-2004 dbSoft, Inc.

Near/On Shore Recovery Branch Director	Chris Gregory		714-273-8036	
Division/Group Supervisor	Chris Stadiem		TBD	
Safety Officer	Ed Doyle/Archie Greshan		302-293-8959/8960	

Resources Required

Area of Operation	Resource Type	Description	Quantity	Size
NJ-7 Division	Boom	Boom	2500 feet	
NJ-7 Division	Equipment: Small	Manual Removal Tools	20 Sets	
NJ-7 Division	Manpower: Responder	Laborers	20 each	
NJ-7 Division	Storage: Solid	Roll Off Box	4 each	
NJ-7 Division	Vessel	Less than 21'	1 each	

Assignments

Physically remove free floating oil in vicinity of Eagles Nest, use manual removal, flushing, bagging. Line area with hard boom and snare during flushing.

Special Instructions for Division / Group

Conduct boom tending operations 24x7.
Conduct beach pre-clean up by moving debris above high water mark in potential impact areas.

Location of Work

Carneys Point, Helm's Cove

Special Environmental Considerations

Cut no wetland vegetation without state approval. Do not walk through or work in Mud Flats. Report oiled wildlife to situation unit.

Additional Information

Report situation status to the Situation Unit Leader each day at 0900, 1300, and 1600 hrs. 267-765-3446/3448

Area of Operation	Resource Type	Description	Quantity	Size
NJ-8 Division	Boom	Boom	2500 feet	
NJ-8 Division	Equipment: Small	Hand Tools	20 Sets	
NJ-8 Division	Manpower: Responder	Laborers	20 each	
NJ-8 Division	Storage: Solid	Roll Off Box	4 each	
NJ-8 Division	Vessel	Less than 21'	1 each	

Assignments

Collect, contain oil with boom strategies and recover (Kelly Pt., Penns Beach)
Report resource status each day at 0900, 1300, and 1600 hrs. to the Situation Unit Leader at 267-765-3446 or 3448.

Special Instructions for Division / Group

Conduct boom tending operations 24x7.
Conduct beach pre-clean up by moving debris above high water mark in potential impact areas.

Location of Work

Kelly Pt., Penn's Beach

Special Environmental Considerations

Cut no wetland vegetation without state approval. Do not walk through or work in Mud Flats. Report oiled wildlife to situation unit.

Special Site-Specific Safety Considerations

Review Site Safety Plan (Contractors) with special attention to PPE, slips, and trips & falls. All Personnel are required to follow Decon procedures in Site Safety Plan.

Additional Information

Report situation status to the Situation Unit Leader each day at 0900, 1300, and 1600 hrs. 267-765-3446/3448

ICS 204 - Assignment List

Incident:	MV Athos I	**Branch:**	Air Ops Branch
Period:	Period 7 (12/3/2004 06:00 - 12/4/2004 06:00)	**Division/Group:**	
Prepared By Signature:		**Task Force:**	
Approved By Signature:			

Operations Personnel

Title	Person	Radio	Phone	Pager
Operations Section Chief	Theo Camlin		425-501-5430	
Air Ops Branch Director	Brad Barker		TBD	
Safety Officer	Ed Doyle/Archie Greshan		302-293-8959/8960	

Resources Required

Area of Operation	Resource Type	Description	Quantity	Size
Air Ops Branch	Aircraft: Helo	Aircraft: Helo	3 each	
Air Ops Branch	Manpower: Supervisor	Supervisors	1 each	

Assignments

Surveillance - Overflights and coordinating vessel movement

- First light overflight, estimated departure time: 0830 from heloport to support SCAT
- Ops overflight, estimated departure time: 0800 - 0830 from heloport
- Overflights need to be prescriptive in determining extent of free floating oil to facilitate commercial vessel transit.
- All overflight personnel report oiled wildlife to Situation Unit Leader at 267-765-3446.
-Ensure helo is available to support on water skimming operations.
- All other overflights conducted as needed

One helo will be used to support SCAT, another will be used to direct skimming operations and to monitor boom deployments and the third will be used at the discretion of the UC.

There are currently flight restrictions scheduled for the weekend due to the Army/Navy game and the Presidential visit. Unified Command is working on a flight exemption. More info to follow.

Daily Health and Safety Message

December 3, 2004

Three Day Weather Forecast

Dec 3 Friday - day

Sun and a few passing clouds. High 49F. Winds W at 10 to 15 mph.

Dec 3 Friday - night

A mostly clear sky. Low 31F. Winds W at 5 to 10 mph.

Dec 4 Saturday

Sunshine. Highs in the upper 40s and lows in the mid 30s.

Dec 5 Sunday

Mostly sunny. Highs in the low 50s and lows in the low 40s.

Site Description: On-Water & Shoreline Cleanup Activities

Potential Hazards: Slippery and uneven surfaces; exposure to weathered oil; cold/heat exposure; slips, trips, and falls; slippery surfaces while conducting boat operations.

General Safety Concerns:

ADHERENCE TO ALL PPE REQUIREMENTS

Level D (no known hazard(s))

- **Tyvek-type and /or rain gear.**
- **Hard hat when overhead hazards exist**
- **Safety glasses/goggles/face shield**
- **Work shoes**
- **Disposable boots**
- **Chemical resistant gloves**
- **Hearing protection**

NOTE: Eye Protection is NOT OPTIONAL. ANSI Approved Safety Eye Wear with Side Shields is the minimum eye protection requirement for all activities.

Personal Flotation Equipment (PFDs) are required to be worn properly—fully secured—when working on or near the waters edge. UNSECURED PFDs MEANS NO PFDs!

Gloves and sleeve area and boot and pant leg area should be taped to prevent contact with product.

Use of tobacco products of any kind and eating/drinking is restricted to designated areas only and only following proper personal decon-tamination. Contractors should clearly designate break/rest areas. Otherwise such activity is prohibited.

Special notes –

- **In the event clean up activities involve entry to industrial/commercial facilities, safety rules of the facility will apply as long as the safety rules do not contradict this Plan.**

- **ALL INJURIES REGARDLESS OF SEVERITY MUST BE REPORTED TO THE OPERATIONS CENTER AND SAFETY IMMEDIATELY AND A INCIDENT REPORT MUST BE FORWARDED VIA THE FIELD SAFETY REPRESENTATIVE**
- **ALL PERSONNEL VISITING THE HOT ZONE MUST BE WEARING THE APPROPRIATE PPE.**
- **Handling of distressed or dead animals is restricted to agency personnel. If found, report to the area supervisor who will notify the appropriate person.**

ATV Safety Practices

Operating ATV's can be hazardous if safety practices are not followed:

- Wear proper protective clothing. This includes an approved helmet, gloves, eye protection, a long-sleeved shirt, and long pants.
- Inspect the ATV before you begin.
- Be aware of potential hazards/obstructions that may be present in the area where you are operating.
- DO NOT carry passengers.
- Be aware of your surroundings.
- Watch out for other personnel and equipment.

Handling characteristics of ATVs vary depending upon basic design and how they are equipped.

ATVs with solid rear axles (and those with locked differentials) turn both rear wheels at the same speed. ATVs with unlocked differentials allow the rear wheels to turn at different speeds. If a rear wheel leaves the ground, it will spin freely. Then when it touches the ground again, it may grab and cause loss of control.

Some ATVs are equipped with four-wheel drive. When operating in a four-wheel drive mode, keep the following in mind:

- Use of only the front brake or only the rear brake has the effect of braking both the front and rear wheels.
- Abrupt deceleration from shifting to a lower gear (engine braking) will affect both the front and rear wheels.

Posture

The correct riding posture will help you to easily operate the controls and help you react more quickly to potential hazards. Proper straight line riding posture includes:

- Head and eyes up, looking well ahead
- Shoulders relaxed, elbows bent slightly out, away from your body
- Hands on the handlebars
- Knees in toward the gas tank
- Feet on the footrests, toes pointing straight ahead
- Always keep both hands on the handlebars and both feet on the footrests. Removing even one hand or foot can reduce your ability to control the ATV, or could cause you to lose your balance and fall off. ATVs are rider-active—to enhance the performance capabilities of the ATV in maneuvers such as turning, negotiating hills, and crossing obstacles, you must shift your body weight.

SAFE USE OF PRESSURE WASHERS AND STEAM CLEANERS

Work to Be Done: Removal of contaminants from equipment, shoreline, piers, and similar structures.

Equipment: Steam cleaners, and pressure washers powered by internal combustion engines.

Site Description: Various types of work surfaces, rocks, sand, oily surfaces.

Potential Hazards: Slips, trips, falls, steam burns, injuries from excess pressure, excessive noise, injuries from hot surfaces on the hotsy or pressure washers, insect and animal bites, and potential drowning.

Special notes: All personnel should adhere to the following precautions with steam cleaners and pressure washers:

- All personnel will wear proper personal protective equipment when working operating the steam or pressure wands or assisting personnel using this equipment. This will include Tyvek coveralls, rubber boots, nitrile or neoprene gloves, **face shield with clear or tinted safety glasses with side shields under the shield**.
- All personnel working around pressure washers or steam cleaners must, at a minimum, wear regular safety glasses.
- **Equipment operators should never direct the power spray of the wand to themselves or other personnel.** Steam washers are for decontamination of equipment only. Personal Protective Equipment should not be washed or decontaminated by using steam or power washers.
- Prior to starting the equipment caution should be exercised when filling the tank with gasoline. No smoking will be allowed in the area while equipment is being refueled. Prior to startup all hoses and wand should be connected and rechecked to ensure the connections are secure.
- All supply and wand hoses should be free of kinks and where possible secured to not present a tripping hazard to other personnel.
- Operators should be cautious when using the rope pull to start the engine. Wet hands, slippery hands, pulls or frayed pull rope can lead to injury.
- Operators should ensure that personnel in the area are a safe distance from the wand and equipment operations.
- Noise surveys should be taken to check noise exposure to workers. Generally personnel working on or within 5 feet of steam or pressure should wear hearing protection.
- When working near water, Personal Flotation Devices (PFD's) must be worn.

- Contaminated areas, where personnel are working, should be marked and barricaded, and the surface covered to prevent spread of contamination. NOTE: If plastic is used for coverage of the surfaces, personnel must exercise care when walking on the plastic surfaces as they can become slick with a combination of contaminant and water. The wearing of rubber oil resistant non-skid boots or the use of cloth covering on the surface instead of plastic is preferable.
- Wand levers should always be held and triggered by the operator's hand. At no time should the lever be wired or taped in the open position.

ICS 230 - Daily Meeting Schedule

Incident:	MV Athos I	**Prepared By:** Planning Section	**at** 12/2/2004 16:00
Period:	Period 7 (12/3/2004 06:00 - 12/4/2004 06:00)	**Version Name:**	12/03/04 Meeting Schedule

Meeting Name & Date/Time	Purpose	Attendees	Location
Sit Rep 12/3/2004 00:00			
Operations Briefing 12/3/2004 06:00	Present IAP and assignments to the supervisors/leaders for the next operational period.	IC, COMMAND STAFF, GENERAL STAFF, SUL, RUL, SAM, COMMS UNIT, BRANCH DIRECTORS, TASK FORCE/STRIKE TEAM LEADERS, & GROUP LEADERS.	Holiday Inn

T/V ATHOS I SPILL, DELAWARE RIVER, NEW JERSEY
1540 EST, Saturday December 4, 2004

NOTE: This is a site specific forecast from the National Weather Service generated specifically for this incident region.

Sunset (12/04): 1640

Sunrise (12/05): 0700
Sunset (12/05): 1640

36 Hour Forecast:

_____
Winds:
Tonight, the winds are expected to be from the SW at 10-15 knots. Sunday, west winds at 10 knots are predicted to shift and be from the NW at 5 knots by the afternoon hours. Sunday night, NW winds at 5 knots are forecast to shift and be from the east at 5 knots by the late evening hours.

_____
Waves:
Tonight, the seas are expected to be 1-2 feet. Sunday through Sunday night, the seas are predicted to be 1 foot or less.

_____
Precipitation:
Tonight through Sunday night, no precipitation is forecast.

_____
Ceiling/Visibility:
Tonight, clear skies are expected to diminish to partly to mostly cloudy skies by the late evening hours. Sunday, partly cloudy skies are predicted. Sunday night, partly cloudy skies are forecast to become cloudy by the late evening hours. Visibility is expected to be unrestricted.

_____
Temperatures:
Temperatures are forecast to range from highs in the 50’s to lows in the 30’s.

_____
Extended Forecast:
Monday, the winds are expected to be from the east at 5 knots shifting to be from the SE at 10 knots by the afternoon hours. Monday night, south winds at 5-10 knots are predicted. Seas 1 foot. Mostly cloudy skies. Chance of rain.

Tuesday, SE winds at 10 knots are predicted to shift and be from the south at 10-15 knots with gusts to 25 knots by the late morning hours. Tuesday night, SW winds at 15-20 knots are predicted to shift and be from the west at 15-20 knots with gusts to 30 knots by the late evening hours. Seas 1 foot building to 2-3 feet by the evening hours. Mostly cloudy skies. Chance of rain.

Wednesday, west winds at 15 knots with gusts to 25 knots are forecast to shift and be from the NW at 5-10 knots by the afternoon hours. Seas 2 feet. Mostly cloudy skies. Dry.

ICS 202 - General Response Objectives

Incident:	MV Athos I	**Prepared By:**	Planning Section **at** 12/3/2004 12:00
Period:	Period 9 (12/5/2004 06:00 - 12/6/2004 06:00)	**Version Name:**	Unified Command Objectives

Overall and Tactical Objectives

	Assigned To	Status
Conduct operations in accordance with the site safety plan.		
Continue to facilitate vessel movement in affected port areas.		
Expedite decon of vessels.		
Continue to enforce safety zone.		
Salem/Hope Creek Power Plant objective		
• Develop and execute plan to locate and mitigate any sub-surface oil that may threaten the Salem/Hope Creek Nuclear Power Plant water intakes.		
• Provide information and conditions for plant to be reasonably assured that no abundance of oil will clog the intake screens.		
Continue aggressive shoreline cleanup and disposal operation.		
Continue to assess the location and extent of oil impact, aggressively assess the location and extent of submerged oil.		
Continue execution of salvage plan.		
Continue to refine plan and mobilize response resources to confine and recover submerged oil.		
Monitor existing sensitive site booming strategies & implement additional strategies as appropriate.		
Collect, recover and dispose of free-floating oil.		
Collect, recover, and rehabilitate injured wildlife.		
Continue to keep stake holders and public informed.		
Unified Command Emphasis:		
• Assess impact to maritime commerce and develop appropriate response priorities.		
• Make Safety a Top Priority. Adhere to SSP and watch out for your fellow responders.

ICS 204 - Assignment List

Incident:	MV Athos I	**Branch:**	Water Column Monitoring Team
Period:	Period 9 (12/5/2004 06:00 - 12/6/2004 06:00)	**Division/Group:**	
Prepared By Signature:		**Task Force:**	
Approved By Signature:			

Operations Personnel

Title	Person	Radio	Phone	Pager
TF#1	Jeff Bechtell		908-428-4459	
TF#2	Sean McGleskey		267-228-8536	
TF#3	Pat McNeilly		609-351-8516	

Resources Required

Area of Operation	Resource Type	Description	Quantity	Size
Water Column Monitoring Tean	Manpower: Responder	TF#2 Snare Samplers	12 each	
Water Column Monitoring Tean	Manpower: Responder	TF#3 Crab Pot Samples		
Water Column Monitoring Tean	Manpower: Responder	TF#1 Snare Samplers	12 each	
Water Column Monitoring Tean	Vessel	TF#1 EPA Boat	1 each	
Water Column Monitoring Tean	Vessel	TF#2 AST 32 Feet	1 each	
Water Column Monitoring Tean	Vessel	TF#3 M/V Christine Emily	1 each	

Assignments

TF#1 - Deploy 4 snare sampler transects of 3 Snare Samplers in accordance with attached maps

TF#2 - Pull deployed 12 snare samplers south of Pea Patch Island and document extent of oiling. Contact spervisor of results. Re-deploy samplers as directed by operations.

TF#3 - Deploy 12 crab pot samplers from Aldars Cove to Cedar Swamp, but not in channel.

Special Instructions for Division / Group

Do not deploy samplers inside the channel or in a position where floats may cause navigational hazard.

Additional Information

Call 267-765-3447 from 1000 - 1100 and validate if you have any resource numbers different than listed on this form. This is critical to allow us to plan properly and ensure you will have the resources you need to do your job tomorrow. Report situation status to the Situation Unit Leader each day at 0900, 1300, and 1600 hrs. 267-765-3446/3448

Fax all equipment and personnel Check-In sheets to 215-293-4476 with an attention line to "Resource Unit"

Please review attached protocol for handling dead wildlife carcasses.

ICS 204 - Assignment List

Incident:	MV Athos I	**Branch:**	Waterways Management Branch
Period:	Period 9 (12/5/2004 06:00 - 12/6/2004 06:00)	**Division/Group:**	Vessel Traffic Mgmt Group
Prepared By Signature:		**Task Force:**	
Approved By Signature:			

Operations Personnel

Title	Person	Radio	Phone	Pager
Operations Section Chief	Theo Camlin		425-501-5430	
Operations Section Deputy Port Ops	R. Laferriere		609-351-7142	
Waterway Management Branch	LT Sligh/LT Knight		215-778-4534	
Vessel Management Group	ENS Munch/CPO Erickson		215-271-4805	
Safety Officer	Ed Doyle/Archie Greshan		302-293-8959/8960	

Resources Required

Area of Operation	Resource Type	Description	Quantity	Size
Vessel Traffic Mgmt Group	Manpower: Responder	Responder	3 each	
Vessel Traffic Mgmt Group	Manpower: Supervisor	Assistant Supervisor	2 each	
Vessel Traffic Mgmt Group	Manpower: Supervisor	USCG Vessel Manageme	2 each	

Assignments

Coordinate entry / exit of commercial vessel traffic.
- By 0800 every morning ensure that the 204 information for the Safety Zone Enforcement Group is communicated to the OINC of the 65 footer and to the Coxswain securing the northern end of the safety zone.

Oversee salvage and recovery of sunken airboat.

- Prioritize departing vessels for cleanup.
- Coordinate with Vessel Decon Group Supervisor for priority vessels for cleanup and departure.

Report situation status to the situation unit each day at 0900, 1300, and 1600 hrs to the Situation Unit Leader at 267-765-3446/3448

Special Site-Specific Safety Considerations

Review Site Safety Plan(Contractors) With Special Attention To PPE, Slips, and Trips & Falls. All Personnel Are Required To Follow Decon Procedures In Site Safety Plan.

Additional Information

Provide following information at each report:

Vessels Activity:
- Awaiting Berth
- Authorized inbound through Safety Zone
- Departed
- Decon List
- Being Deconed
- Decon Completed
- Inspection List

Waterways Management Branch	LT Sligh/CWO Gamache		215-778-4534	

Resources Required

Area of Operation	Resource Type	Description	Quantity	Size
Vessel Decon Group	Barge: Inland	Portable Barge Set	1 each	
Vessel Decon Group	Boom	Boom	200 feet	
Vessel Decon Group	Manpower: Responder	9 person decon team	1 each	
Vessel Decon Group	Manpower: Responder	2 person assessment tea	8 each	
Vessel Decon Group	Manpower: Supervisor	Supervisors	1 each	
Vessel Decon Group	Vessel	Boats 28'	2 each	

Assignments

- As directed clean commercial vessels in accordance with vessel decon plan (steamcleaning).
- Note any heavily impacted facilities and report information to ops.
- NSF supervisors will actively monitor and ctitique the operation.
- Decon schedule must be communicated to the stakeholders.

Special Site-Specific Safety Considerations

- Safety: Ensure proper PPE such as face shields are used during pressure washing operations.

Additional Information

- Conduct decon ops in accordance with Vessel Decon Group Supervisor.

10 Task Forces Total:

Vessel Decon Task Force 1
Vessel Decon Task Force 2
Vessel Decon Task Force 3
Vessel Decon Task Force 4
Vessel Decon Task Force 5
Vessel Decon Task Force 6
Vessel Decon Task Force 7
Vessel Decon Task Force 8
Vessel Decon Task Force 9
Vessel Decon Task Force 10

Each Task Force is comprised of equipment listed above.

Resources Required

Area of Operation	Resource Type	Description	Quantity	Size
Submerged Oil Identification As	Manpower: Responder	3-person teams	2 each	
Submerged Oil Identification As	Manpower: Responder	4-person dive team	1 each	
Submerged Oil Identification As	Manpower: Responder	LCDR Lynsky	1 each	
Submerged Oil Identification As	Manpower: Responder	LT Cesario	1 each	
Submerged Oil Identification As	Manpower: Responder	J. Michel	1 each	
Submerged Oil Identification As	Manpower: Responder	LT McGlinchey	1 each	
Submerged Oil Identification As	Manpower: Responder	E. Lavine	1 each	
Submerged Oil Identification As	Manpower: Responder	Alan Humphries EPA	1 each	
Submerged Oil Identification As	Manpower: Responder	T. Camlin	1 each	
Submerged Oil Identification As	Sorbent	pom-poms	24 bags	
Submerged Oil Identification As	Vessel	EPA Side-Scan Sonar Bc	1 each	
Submerged Oil Identification As	Vessel	Greater than 21'	1 each	32 feet
Submerged Oil Identification As	Vessel	Greater then 21'	1 each	30 feet
Submerged Oil Identification As	Vessel	Less than 21' (EPA Boats	2 each	

Assignments

Conduct submerged oil assessment in accordance with submerged oil assessment plan.
Specific over all actions will be taken in 3 areas:

Recovery operations alternatives: Institute pilot test protocols to evaluate the efficacy of underwater containment and recovery alternatives.

Test Seine and Pom-Pom drags.

Physical assessment:

Use water column monitoring device (consists of a Norwegian Fender, 50' polly propylene rope with pom-poms attached the length of the rope, and an anchor), crabpots & side-scan sonar. Coordinate placement with appropriate State personnel. Sample techniques and disposition must be coordinated with appropriate State personnel. Initiate or continue dive team operations to verify assessment findings and map/survey results. Physical assessment will be conducted in the Mantua Creek area.

Engineering Alternatives:

Investigate engineering alternatives to divert debris and suspended oil from the Salem Nuclear Power Plant water intakes. Efforts will be directed by Army Corps of Engineers and coordinae with Salem Nuclear Power Plant.

Special Site-Specific Safety Considerations

Review Site Safety Plan(Contractors) With Special Attention To PPE, Slips, and Trips & Falls. All Personnel Are Required To Follow Decon Procedures In Site Safety Plan.

Assignments

Identify & protect sensitive sites as requested. Monitor & maintain boom at GRP sites already deployed. Ensure it's effectiveness.

Maintain boom tending operation.
Deploy Thousand Acre Marsh
Deploy Port Penn
Priority: Deploy protection boom at Reedy Island
Priority: Reset boom deployed at Salem Creek
Priority: Reset boom deployed at Pea Patch
Priority: Reset boom deployed at Christina River
Maintain boom across Cedar Creek
Maintain boom across Delaware City Branch Channel
Maintain boom gate at Chesepeake and Delaware Canal
Maintain Cascading deflection boom to protect Salem Nuclear Power Plant water intakes
Maintain boom around Salem Nuclear Power Plant
Evaluate need to deploy boom at Goose Point to Fort Mott
Daylight Operations only except for Salem Power Plant and Christina River.

Special Instructions for Division / Group

Tend boom as directed. Morning overflights will be conducted to determine whether deployed boom requires tending. Overflight information will be supplemented by on water observations.

Special Site-Specific Safety Considerations

Review Site Safety Plan(Contractors) With Special Attention To PPE, Slips, and Trips & Falls. All Personnel Are Required To Follow Decon Procedures In Site Safety Plan.

Additional Information

Call 267-765-3447 from 1000 - 1100 and validate if you have any resource numbers different than listed on this form. This is critical to allow us to plan properly and ensure you will have the resources you need to do your job tomorrow. Report situation status to the Situation Unit Leader each day at 0900, 1300, and 1600 hrs. 267-765-3446/3448

Fax all equipment and personnel Check-In sheets to 215-293-4476 with an attention line to "Resource Unit"

NJ-4 Division	Manpower: Supervisor	NSF Reps	2 each	
NJ-4 Division	Manpower: Supervisor	Supervisor	1 each	
NJ-4 Division	Manpower: Supervisor	Fish and Wildlife Rep	1 each	
NJ-4 Division	Storage: Solid	Rolloff Boxes	8 each	
NJ-4 Division	Vacuum Transfer Unit	VTU	2 each	
NJ-4 Division	Vessel	Less than 21'	3 each	
NJ-4 Division	Vessel	Greater than 21'	4 each	

Assignments

-Manually recover oil and oil coated debris.
-Employ and assess effectiveness of various techniques:
  -Low pressure flushing
  -Squigees
  -Snares
  -Vacuum Unit
-Line area with hard boom and snare during flushing.
-Conduct cleanup operations following the guidance in the enclosure titled "Cleanup Recommendations"

Special Instructions for Division / Group

Tend boom as directed. Morning overflights will be conducted to determine whether deployed boom requires tending. Overflight information will be supplemented by on water observations.
Conduct beach pre-clean up by moving debris above high water mark in potential impact areas.

Location of Work

Mantua Creek and Commodore Berry Bridge.

Special Environmental Considerations

Long, narrow creek with spotty oil throughout sausage boom required. No wetland vegetation should be cut without State approval. Report oiled wildlife to Situation Unit. Do not walk through or work in Mud Flats.

Special Site-Specific Safety Considerations

Review Site Safety Plan(Contractors) With Special Attention To PPE, Slips, and Trips & Falls. All Personnel Are Required To Follow Decon Procedures In Site Safety Plan.

Resources Required

Area of Operation	Resource Type	Description	Quantity	Size
Air Ops Branch	Aircraft: Helo	Aircraft: Helo	2 each	
Air Ops Branch	Manpower: Supervisor	Supervisors	1 each	

Assignments

Surveillance - Overflights and coordinating vessel movement

- First light overflight, estimated departure time: 0830 from heloport to support SCAT
- Ops overflight, estimated departure time: 0800 - 0830 from heloport
- Overflights need to be prescriptive in determining extent of free floating oil to facilitate commercial vessel transit.
- All overflight personnel report oiled wildlife to Situation Unit Leader at 267-765-3446.
-Ensure helo is available to support on water skimming operations.
- All other overflights conducted as needed

One helo will be used to support SCAT, another will be used to direct skimming operations and to monitor boom deployments and the third will be used at the discretion of the UC.

Special Medical Emergency Procedures

Document all incident related injuries/illnesses. Report to Medical Unit Leader and Safety
Communicate any and all loss of degradation of medical services/resources to the Incident Commander (IC)
Emergency Medical Units are staged during daylight hours on both the PA and the NJ sides of the response. On the NJ side, the unit stands-by at the Miller Paulsboro Staging area; on the PA side at the Lagoon Staging Area.

Incident:	MV Athos I	**Prepared By:**	Section, Planning	**at** 12/3/2004 09:00
Period:	Period 9 (12/5/2004 06:00 - 12/6/2004 06:00)	**Version Name:**	Air Ops	

Personnel and Communications

Title/Position	Name	Air/Air Frequency	Air/Ground Frequency	Phone
Air Ops Branch Director	Brad Barker	VHF 123.05		985-381-0697

Planned Flight Information

Type Of Aircraft	Operating Base	Aircraft Company	Passenger Capacity	Purpose	Scheduled Flights
Bell 206 L	Pier 36	Horizon	5	Surveillance N98KR	As Needed, Available 08:30
Bell Jet Ranger	Pier 36	Analar	3	N50178	08:30
Bell Jet Ranger	Pier 36	Horsham Valley (Standby with 2hrs lead time)	3	N4015G	As Needed, Available 08:30

Notes (Special Instructions, Safety Notes, Hazards, Priorities)

Refrain from air ops in the following areas: (Known Eagle Nesting Areas)
Petty Island
Mantua Creek
Monds Island

Operational Requirements:
1/4 mi. radius
>= 500' AGL

If single engine without floats, no open water operations. All operations <300 AGL MUST be conducted within 1/8 miles of shore

All air operation to terminate NLT 1430

First overflight (ops) shall verify boom is in place around sensitive sites in accordance with protection strategies. Inflatable vest required to be worn on all open water flights.

If injured/contaminated wildlife is sighted, contact the Situation Unit at 267-765-3440/3437/3443/3444

Incident Name:	MV ATHOS I	Location:	Philadelphia, PA

Three Day Weather Forecast

Dec 5 Sunday - day

Generally sunny despite a few afternoon clouds. High 54F. Winds W at 5 to 10 mph.

Dec 5 Sunday - night

Partly cloudy skies during the evening will give way to cloudy skies overnight. Low around 40F. Winds light and variable.

Dec 6 Monday

Showers. Highs in the low 50s with temperature nearly steady overnight.

Dec 7 Tuesday

Chance of showers. Highs in the upper 60s and lows in the upper 40s.

TO: ALL PERSONNEL

- **All safety rules are to be followed.**
- **Look out for your fellow responders.**
- **Use Common Sense.**
- **Do Not Take Chances.**
- **If unsafe, STOP and talk to your supervisor.**
- **ZERO Injuries is our goal.**

Site Description: On-Water & Shoreline Cleanup Activities

Potential Hazards: Slippery and uneven surfaces; exposure to weathered oil; cold/heat exposure; slips, trips, and falls; slippery surfaces while conducting boat operations.

General Safety Concerns:

SPECIAL CAUTION:
STAY CLEAR OF DIVING OPERATIONS BY AT LEAST 200 YDS. THIS WILL BE STRICTLY ENFORCED!

ADHERENCE TO ALL PPE REQUIREMENTS

Level D (no known hazard(s))

- **Tyvek-type and /or rain gear.**
- **Hard hat when overhead hazards exist**
- **Safety glasses/goggles/face shield**
- **Work shoes**
- **Disposable boots**
- **Chemical resistant gloves**
- **Hearing protection**

NOTE: Eye Protection is NOT OPTIONAL. ANSI Approved Safety Eye Wear with Side Shields is the minimum eye protection requirement for all activities.

Personal Flotation Equipment (PFDs) are required to be worn properly—fully secured—when working on or near the waters edge. UNSECURED PFDs MEANS NO PFDs!

Gloves and sleeve area and boot and pant leg area should be taped to prevent contact with product.

Use of tobacco products of any kind and eating/drinking is restricted to designated areas only and only following proper personal decon-tamination. Contractors should clearly designate break/rest areas. Otherwise such activity is prohibited.

Special notes:

- **In the event clean up activities involve entry to industrial/commercial facilities, safety rules of the facility will apply as long as the safety rules do not contradict this Plan.**
- **ALL INJURIES REGARDLESS OF SEVERITY MUST BE REPORTED TO THE OPERATIONS CENTER AND SAFETY IMMEDIATELY AND A INCIDENT REPORT MUST BE FORWARDED VIA THE FIELD SAFETY REPRESENTATIVE**
- **ALL PERSONNEL VISITING THE HOT ZONE MUST BE WEARING THE APPROPRIATE PPE.**
- **Handling of distressed or dead animals is restricted to agency personnel. If found, report to the area supervisor who will notify the appropriate person.**

VESSEL SAFETY

The operator is responsible for the safety of the crew and vessel at all times. The vessel shall never be operated in a manner that threatens safety of the crew or vessel. The operator is to ensure that ALL personnel aboard the vessel are wearing lifejackets AT ALL TIMES! Under no circumstances are personnel to enter the water while the vessel is underway or the vessel's engine(s) is(are) running.

It is the operators' responsibility to ensure the vessel is seaworthy and in safe operating condition prior to leaving shore. The operator will inspect the vessel and determine that all required operational and safety equipment is on board and in proper working condition.

The operator is responsible for safe transport, launch, operation, and recovery of the vessel.

In the event of a boating accident, the operator is the primary person responsible for the vessel and crew. If vessel or crew is in imminent danger, the operator should contact the US Coast Guard immediately.

Ensure vessels are not overloaded with personnel or equipment, and consult vessel capacity according to the boat plate or sticker.

All vessels will carry on board an air horn to be available for emergency sound signaling.

USE THE RIGHT VESSEL FOR THE RIGHT JOB!

Stop Vessel Operations Criteria (Weather)

Vessels will cease operations when any of the following occur:

1. Visible lightning strike
2. 25 knot winds
3. Sea state:

>60' vessels: 6'	30'-60' vessels: 5'	20'-30' vessels: 4'	<20' vessels: 3'

4. Whenever the Safety Officer or one of his assistants deems operations too hazardous to continue.
5. Whenever the vessel operator deems it too hazardous to continue operations.

Vessel operators and response supervisors need not wait for a Safety Officer to deem operations too dangerous. If you feel that the conditions are too hazardous to safely operate in, discontinue operations, notify your supervisor, and then notify the Safety Officer. You may be the first responder to experience hazardous conditions, and your input to the Safety Officer may provide a valuable heads-up to the rest of the command.

Nighttime vessel operations and restrictions

All vessels with lengths of 20 feet or less are required to be safely moored/recovered prior to sunset.

Flat-bottom, "john boat" style boats are not permitted to operate at night and should be safely moored/recovered prior to sunset.

All vessels not specifically restricted from nighttime ops, as detailed above, may only operate after sunset with the proper use of navigation lights as required by Chapter I of the Navigation Rules.

Personal Protective Equipment (PPE) requirements:

All responders working on or near the water must wear a Personal Floatation Device (PFD).

Responders performing the following operations must wear "Mustang" exposure suits:

- Waterborne SCAT teams
- Boom tending and placement teams
- Waterborne vessel decon teams
- Waterborne wildlife recovery teams
- Permanent boat drivers/crew

Crews of vessels equipped with enclosed, heated cabins, where the crew will primarily remain, are excluded from the exposure suit requirement.

Requests for deviation from the above requirements should be directed to the Site Safety Officer, Ed Doyle (302) 293-8959.

Gasoline Safety

Gasoline is a flammable liquid and should be stored at room temperature, away from potential ignition sources such as sparks and flames, space heater, and any other ignition sources. Gasoline vapors are heavier than air and can travel along the ground to an ignition source.

Refueling Advisory

Be aware that fire incidents involving refueling are not unusual. Many of these incidents may be related to static electricity buildup and discharge.

Safety guidelines on filling containers:

- Do not smoke while refueling.
- Shut off the engine using the gasoline along with any engines in the immediate vicinity.
- Only store gasoline in containers with approved labels. Never store gasoline in glass or unapproved containers.
- Portable containers must be placed on the ground, and the nozzle must stay in contact with the container when filling, to prevent buildup and discharge of static electricity.
- Fill the container at a slow rate. This will decrease the chance of static ignition buildup and minimize incidents of spillage or splattering.
- Keep your face away from the nozzle or container opening.
- Avoid prolonged breathing of gasoline vapors.
- Never siphon gasoline by mouth. Do not put gasoline in your mouth—gasoline can be harmful or fatal if swallowed. If someone swallows gasoline, do not induce vomiting. Call for medical assistance immediately.
- Keep gasoline away from your eyes and skin, because it may cause irritation. Wear safety glasses while filling tanks.
- Use gasoline only in open areas that get plenty of fresh air.
- Never use gasoline to wash your hands.
- Remove gasoline-soaked clothing immediately.
- Fill container to no more than 95 percent full to allow for expansion.
- Place cap tightly on the container after filling. Do not use containers that do not seal properly.
- When transporting gasoline in a portable container, make sure the container is secure from tipping and sliding.

COLD STRESS SAFETY BULLETIN **November 30, 2004**

Cold Stress

Frostbite and hypothermia are the two major hazards of working in cold temperatures. A cold environment can reduce the temperature of the body and cause shivering, reduced mental alertness, and sometimes loss of consciousness. However, a healthy worker who is properly protected and takes reasonable precautions can function efficiently and safely in cold environments.

Factors affecting cold exposures

Factors that can contribute to cold injury include exposure to temperature, wind, humidity, moisture, contact with water or metal, inadequate clothing, age, and general health. Physical conditions that can worsen the effects include fatigue, allergies, vascular disease, smoking, drinking alcohol, and certain specific drugs or medicines.

What is Hypothermia?

Hypothermia is an abnormally low body temperature caused by exposure to cold air or cold water. Hypothermia occurs when the body loses heat faster than it can produce it. When judging cold hazards, reliance on air temperature alone can be misleading. Hypothermia can develop in air temperatures between 30-50 degrees. Chilling winds make the body even more susceptible to hypothermia.

Warning Signs

Pain in the hands, arms, legs, or feet (extremities) may be the first warning of dangerous exposure to cold. Severe shivering must be taken as a sign of danger requiring removal from the cold exposure. Personnel should notify their supervisor and go immediately to a warming shelter if any of the following symptoms occur:

- pain, numbing, tingling, skin whitening or turning very red or red purple in the extremities,
- cold hands and feet that turn blue and sweaty,
- foot swelling with tingling, itching, severe pain and blistering,
- onset of heavy shivering,
- excessive fatigue,
- drowsiness, or
- euphoria (a feeling of well being).

Evaluating cold exposure hazards.

Common sense will generally dictate how much clothing to wear and when to get into a warm area in most cases.

Preventing cold stress.

- Provide sufficient warm clothing. Wear multiple clothing layers.
- The most important parts of the body to protect are the feet, hands, head, and face. Keep the head covered. Up to 40% of body heat is lost through the head.
- Prevent dehydration by drinking plenty of liquids.
- Provide warm locations for breaks.
- Provide wind or draft barriers both inside and outside to limit exposure to air movement.
- The buddy system is important when working in stressful environments.

ICS 230 - Daily Meeting Schedule

Incident:	MV Athos I	**Prepared By:** Planning Section	**at** 12/3/2004 16:00
Period:	Period 9 (12/5/2004 06:00 - 12/6/2004 06:00)	**Version Name:**	12/05/04 Meeting Schedule

Memorandum

To: **Operations Section Chief**

From: **Group Supervisor, Wildlife Recovery**

Subject: **Protocol for handling dead wildlife carcasses found during shoreline cleanup.**

As workcrews are cleaning oiled-shorelines and structures or removing oiled-debris they are likely to encounter dead oiled wildlife. Please handle wildlife carcasses as follows.

A. Dead Oiled Wildlife

All dead oiled wildlife (birds, fish, mammals, turtles) shall be bagged and held for the Wildlife Recovery Unit, and not disposed with other oiled material.

1. **Carefully approach the carcass and confirm that it is dead. If the animal is not dead do not attempt to capture it – contact the Wildlife Recovery Unit immediately for instructions.**

2. **If the animal is confirmed to be dead, place the carcass into a plastic bag – DO NOT mix carcasses together in the same bag – ONE carcass per bag.**

3. **Tie the bag closed and give it to the crew leader.**

4. **The crew leader shall immediately notify the Wildlife Recovery Triage Center at 215-365-1558 to have the carcasses picked up – do not leave bagged oiled carcasses unattended in the field.**

B. Live Oiled Wildlife

Clean up crews shall not attempt to capture live wildlife.

1. **Live oiled wildlife seen during clean up efforts should be reported by the crew leader to the Wildlife Recovery Triage Center at 215-365-1558 and relay the location, time, number and types of oiled wildlife seen.**

If you have any questions, please contact me at 609-214-7895.

T/V ATHOS I SPILL, DELAWARE RIVER, NEW JERSEY
1520 EST, Tuesday December 7, 2004

NOTE: This is a site specific forecast from the National Weather Service generated specifically for this incident region.

Sunset (12/07): 1639

Sunrise (12/08): 0709
Sunset (12/08): 1639

36 Hour Forecast:

_____
Winds:
Tonight, the winds are expected to be from the SE at 5-10 knots shifting to be from the SW at 15-20 knots by the early evening hours shifting to be from the west at 15-25 knots gusting to 35 knots by the late evening hours. Wednesday, W-NW winds at 20-30 knots with gusts to 40 knots are predicted to shift and be from the west at 10-15 knots with gusts to 20 knots by the afternoon hours. Wednesday night, NW winds at 10-15 knots are forecast to shift and be from the E-NE at less than 5 knots by the late evening hours.

_____
Waves (Upper Delaware Bay):
Tonight, the seas are expected to be less than 1 foot increasing to 1-2 feet by the late evening hours. Wednesday, 1-2 foot seas are predicted. Wednesday night, seas less than 1 foot are forecast.

_____
Precipitation:
Tonight, light rain is expected to increase to rain by the late evening hours. Wednesday through Wednesday night, dry weather is predicted.

_____
Ceiling/Visibility:
Tonight, areas of fog and low clouds are forecast. Visibility is expected to be 1-2 miles. Wednesday through Wednesday night, partly cloudy to clear skies are predicted. Visibility is forecast to be unrestricted.

_____
Temperatures:
Temperatures are expected to range from highs in the 50’s to lows in the 40’s. Wind chill is forecast to be in the low to mid 30’s throughout this period.

_____

Extended Forecast:

Thursday, the winds are expected to be light and variable becoming SE at 10 knots by the afternoon hours. Thursday night, east winds at 10-15 knots are predicted. Seas 1 foot or less. Partly cloudy skies diminishing to mostly cloudy skies by the afternoon hours. Chance of evening rain.

Friday, SE winds at 10-15 knots are forecast to shift and be from the south at 15-20 knots by the afternoon hours. Friday night, SW winds at 15-20 knots are predicted. Seas 1-2 feet. Mostly cloudy skies. Dry.

Saturday, west winds at 10-15 knots are forecast to increase to 15-20 knots by the afternoon hours. Seas 1-2 feet. Partly cloudy skies. Slight chance of showers.

ICS 202 - General Response Objectives

Incident:	MV Athos I	**Prepared By:**	Planning Section **at** 12/1/2004 13:00
Period:	Period 12 (12/8/2004 06:00 - 12/9/2004 06:00)	**Version Name:**	Unified Command Objectives

Overall and Tactical Objectives

	Assigned To	Status
Conduct operations in accordance with the site safety plan.		
Continue to facilitate vessel movement in affected port areas.		
Expedite decon of vessels as needed, including recreational vessels.		
Continue to enforce safety zone.		
Salem/Hope Creek Power Plant objective		
• Execute plan to locate and mitigate any sub-surface oil that may threaten the Salem/Hope Creek Nuclear Power Plant water intakes.		
• Provide information and conditions for plant to be reasonably assured that no abundance of oil will clog the intake screens.		
Continue aggressive shoreline cleanup and disposal operation.		
Continue to assess the location and extent of oil impact.		
Aggressively assess the location and extent of submerged oil.		
Continue execution of salvage plan.		
Continue to mobilize response resources and confine and recover submerged oil.		
Monitor existing sensitive site booming strategies & implement additional strategies as appropriate.		
Collect, recover and dispose of free-floating oil.		
Collect, recover, and rehabilitate injured wildlife.		
Continue to keep stake holders and public informed.		
Unified Command Emphasis:		
• Make Safety a Top Priority. Adhere to SSP and watch out for your fellow responders.		

© 1997-2004 dbSoft, Inc.

ICS 204 - Assignment List

Incident:	MV Athos I	**Branch:**	Shoreline Cleanup Assessment Team
Period:	Period 12 (12/8/2004 06:00 - 12/9/2004 06:00)	**Division/Group:**	
Prepared By Signature:		**Task Force:**	
Approved By Signature:			

Operations Personnel

Title	Person	Radio	Phone	Pager
Planning Section Chief	D. Sobieski/T. Deal		267-549-4849	
Environmental Unit	E. Levine		206-849-9941	
SCAT Leader	G. Shigenaka		206-719-7441	
Safety Officer	E. Doyle/A. Greshan		302-293-8959/8960	
On Scene Safety Officer	V. Garner		850-258-9116	

Assignments

SCAT will assess and compile cleanup data and identify areas requiring cleanup resources. Communicate priorities to Operations for deployment of response resources. Report information to the SCAT Leader.
ga
SCAT Team to go into the Racoon Creek and evaluate the shoreline.

Special Instructions for Division / Group

Helicoptor on standby for SCAT (as needed); Helo overflights will provide information to assist/direct SCAT teams.

Description of Work

Develop protocol for Crab Pots

Location of Work

The SCAT Leader will divide the planned work into 6 teams. Work areas will include Small Birch Creek, Old Sand Canal, Oldman's Creek, DE-9 creek entrances, Naaman's Creek, PA-4 and PA-8.

In Addition a SCAT team will walk from Bidwell Creek to Cape May

Work Assignment Special Instructions

State of PA Representative to be on board the overflight/Helo Scat Team

Special Equipment / Supplies Needed for Assignment

All unused equipment should be immediately returned to Staging for redployment.

Special Site-Specific Safety Considerations

Review Site Safety Plan(Contractors) With Special Attention To PPE, Slips, and Trips & Falls. All Personnel Are Required To Follow Decon Procedures In Site Safety Plan.

Additional Information

Report situation status and resource status each day at 1000 and 1430 hrs. 267-765-3446/3448/3447. This is critical to allow us to plan properly and ensure you will have the resources you need to do your job tomorrow.

Fax all equipment and personnel Check-In sheets to 215-923-4476 with an attention line to "Resource Unit"

Please review attached protocol for handling dead wildlife carcasses.

Wake incidents should be reported to the USCG at 267-549-4848. Must work outside Safety Zone established by Waterways Management.

Planning Section Deputy	Chirco, Joe		714-342-0460	
Unit Leader	Kline, Bud		985-960-0585	
Safety Officer	Ed Doyle/Archie Greshan		302-293-8959/8960	

Tactical Objective

Conduct a meeting with the NJDEP, Citizens Unified Coalition for a Clean Maurice River, New Jersey State Police, County OEM and the USCG to:
- Brief the Coalition on the spill response.
- Identify areas where the response can work with the local coalition.
- Identify boom staging areas

Before the meeting, review the plan with the Liason Officer. At the conclusion of the meeting, report outcome to the Liason Officer.

Special Equipment / Supplies Needed for Assignment

All unused equipment should be immediately returned to Staging for redployment.

Special Site-Specific Safety Considerations

Review Site Safety Plan(Contractors) With Special Attention To PPE, Slips, and Trips & Falls. All Personnel Are Required To Follow Decon Procedures In Site Safety Plan.

Additional Information

Report situation status and resource status each day at 1000 and 1430 hrs. 267-765-3446/3448/3447. This is critical to allow us to plan properly and ensure you will have the resources you need to do your job tomorrow.

Fax all equipment and personnel Check-In sheets to 215-923-4476 with an attention line to "Resource Unit"

Please review attached protocol for handling dead wildlife carcasses.

Assignments

Identify & protect sensitive sites as requested. Monitor & maintain boom at GRP sites already deployed. Assure it's effectiveness.

Special Instructions for Division / Group

Tend boom as directed. Morning overflights will be conducted to determine whether deployed boom requires tending. Overflight information will be supplemented by on water observations.

Special Equipment / Supplies Needed for Assignment

All unused equipment should be immediately returned to Staging for redployment.

Special Site-Specific Safety Considerations

Review Site Safety Plan(Contractors) With Special Attention To PPE, Slips, and Trips & Falls. All Personnel Are Required To Follow Decon Procedures In Site Safety Plan.

Additional Information

Report situation status and resource status each day at 1000 and 1430 hrs. 267-765-3446/3448/3447. This is critical to allow us to plan properly and ensure you will have the resources you need to do your job tomorrow.

Approved By Signature:			

Incident Resources - Manpower

Supplier	Resource Type	Description	Quantity	Size	Status
Waterborne Vessel/Pier Decon Group					
Optech	Manpower: Responder	Responders (Nght O	25 each		Assigned

Assignments

- Conduct decontamination activities as directed. Vessels have first priority. Vessel decon to be conducted as required.
- As directed clean commercial vessels in accordance with vessel decon plan (steamcleaning).
- Note any heavily impacted facilities and report information to ops.
- NSF supervisors will actively monitor and critique the operation.
- Decon schedule must be communicated to the stakeholders.

Special Equipment / Supplies Needed for Assignment

All unused equipment should be immediately returned to Staging for redployment.

Special Site-Specific Safety Considerations

- Safety: Ensure proper PPE such as face shields are used during pressure washing operations.

Additional Information

- Conduct decon ops in accordance with Waterborne Vessel/Pier Decon Group Supervisor.

10 Task Forces Total:

Decon Task Force 1
Decon Task Force 2
Decon Task Force 3
Decon Task Force 4
Decon Task Force 5
Decon Task Force 6
Decon Task Force 7
Decon Task Force 8
Decon Task Force 9
Decon Task Force 10

Each Task Force is comprised of equipment listed above.

Please review attached protocol for handling dead wildlife carcasses.

Wake incidents should be reported to the USCG at 267-549-4848. Must work outside Safety Zone established by Waterways Management.

ICS 204 - Assignment List

Incident:	MV Athos I	**Branch:**	Near/On Shore Recovery Branch
Period:	Period 12 (12/8/2004 06:00 - 12/9/2004 06:00)	**Division/Group:**	NJ-3 Division
Prepared By Signature:		**Task Force:**	
Approved By Signature:			

Incident Resources - Manpower

Supplier	Resource Type	Description	Quantity	Size	Status
NJ-3 Division					
Atlantic Response, Inc.	Manpower: Responder	Responders	18 each		Assigned
Clean Harbors Environmenta	Manpower: Responder	Responders	109 each		Assigned
ES&H Environmental Service	Manpower: Responder	Responders	63 each		Assigned
Fleet Environmental Services	Manpower: Responder	Responders	100 each		Assigned
Industrial Cleanup, Inc. - ICI	Manpower: Responder	Responders	31 each		Assigned
Kens Marine Service	Manpower: Responder	Responders	15 each		Assigned
NRC - National Response Cc	Manpower: Responder	Responders	1 each		Assigned

Assignments

Recovery Operations at Woodbury Creek

Special Instructions for Division / Group

Tend boom as directed. Morning overflights will be conducted to determine whether deployed boom requires tending. Overflight information will be supplemented by on water observations.
Conduct beach pre-clean up by moving debris above high water mark in potential impact areas.
Protect the water intake at the Citgo Terminal

Location of Work

Eagle Point

Special Equipment / Supplies Needed for Assignment

All unused equipment should be immediately returned to Staging for redployment.

Special Environmental Considerations

Cut no wetland vegetation without state approval. Do not walk through or work in Mud Flats. Report oiled wildlife to situation unit.

Special Site-Specific Safety Considerations

Review Site Safety Plan (Contractors) with special attention to PPE, slips, and trips & falls. All Personnel are required to follow Decon procedures in Site Safety Plan.

Additional Information

Report situation status and resource status each day at 1000 and 1430 hrs. 267-765-3446/3448/3447. This is critical to allow us to plan properly and ensure you will have the resources you need to do your job tomorrow.

Fax all equipment and personnel Check-In sheets to 215-923-4476 with an attention line to "Resource Unit"

Please review attached protocol for handling dead wildlife carcasses.

Wake incidents should be reported to the USCG at 267-549-4848. Must work outside Safety Zone established by Waterways Management.

Safety Officer	Ed Doyle/Archie Greshan		302-293-8959/8960	

Incident Resources - Equipment

Supplier	Resource Type	Description	Quantity	Size	Status
Air Ops Branch					
Horizon Helicopters	Aircraft: Helo	Bell 206 L	1 each		Assigned
Analar	Aircraft: Helo	Bell Jet Ranger	1 each		Assigned

Assignments

Surveillance - Overflights and coordinating vessel movement

- First overflight shall ensure boom is in place I/A/W protection strategies.
- First light overflight, estimated departure time: 0830 from heloport to support Ops as needed.
- Ops overflight, estimated departure time: 0830 from heloport.
- Overflights need to be prescriptive in determining extent of free floating oil to facilitate commercial vessel transit.
- All overflight personnel report oiled wildlife to Situation Unit Leader at 267-765-3446.
-Ensure helo is available to support on water skimming operations.
- All other overflights conducted as needed
- Flight ops will terminate at 1630, no departures after 1600.

One Helo will be used for operations and scientific support, the other will be used at the discretion of the UC.

New Jersey and Delaware State helicoptors are being used for State oversight.

Additional Information

Report situation status and resource status each day at 1000 and 1430 hrs. 267-765-3446/3448/3447. This is critical to allow us to plan properly and ensure you will have the resources you need to do your job tomorrow.

EPA	Manpower: Responder	MA - Responders	3 each		Assigned
DE F&W	Manpower: Responder	MC - DE F&W Rep	3 each		Assigned
EPA	Manpower: Responder	MC - EPA Rep	1 each		Assigned

Assignments

Assess mobile oil above Delaware Memorial Bridge (M-A), from Delaware Memorial Bridge South to Salem Power Plant (M-B), , Salem Power Plant South (M-C)

Conduct monitoring to determine location of mobile oil and assess movement of this oil. Determine strategies to recover.

1. Task Force 1, EPA Boat: From Tacomy-Palmyra Dridge to Delaware Memorial Bridge assess and maintain the 18 established sites.

2. Task Force 2, Wilmington Fire Boat: Check and maintain Snare Samplers (12) in vicinity of Salem Nuclear Power Plant, deploy (21) additional stations.

3. Task Force 3, Emily Christine Fishing Boat: Check and maintain crab pots, set (24) snare samples in designated areas.

4. Task Force 4, DE Launch, set (24) snare samples in designated areas.

All sites will be revisited daily (weather permitting). The snares will be inspected and the data reported on a standard form. unoiled snare will be returned to the water. Oiled snare will be replaced. Samples will not be collected unless requested.

Special Site-Specific Safety Considerations

Review Site Safety Plan(Contractors) With Special Attention To PPE, Slips, and Trips & Falls. All Personnel Are Required To Follow Decon Procedures In Site Safety Plan.

EPA	Vessel	MA - EPA Boat	1 each	24 feet	Assigned

Incident Resources - Manpower

Supplier	Resource Type	Description	Quantity	Size	Status
Pooled Oil Assessment Group					
Entrix	Manpower: Responder	MA - Entrix Personne	2 each		Assigned
EPA	Manpower: Responder	MA - EPA Personnel	3 each		Assigned

Assignments

TF1
Assess pooled oil from the Tacony-Palmyra Bridge to Delaware Memorial Bridge.

Special Site-Specific Safety Considerations

Review Site Safety Plan(Contractors) With Special Attention To PPE, Slips, and Trips & Falls. All Personnel Are Required To Follow Decon Procedures In Site Safety Plan.

Additional Information

Report situation status and resource status each day at 1000 and 1430 hrs. 267-765-3446/3448/3447. This is critical to allow us to plan properly and ensure you will have the resources you need to do your job tomorrow.

Fax all equipment and personnel Check-In sheets to 215-923-4476 with an attention line to "Resource Unit"

Please review attached protocol for handling dead wildlife carcasses.

Wake incidents should be reported to the USCG at 267-549-4848. Must work outside Safety Zone established by Waterways Management.

Special Medical Emergency Procedures

Document all incident related injuries/illnesses. Report to Medical Unit Leader and Safety
Communicate any and all loss of degradation of medical services/resources to the Incident Commander (IC)
Paramedics & mobile unit are stationed on PA side at Staging Area #3 - Lagoon.
To contact EMS at Staging Area #3 - Lagoon, call Nick Federoff - 609-425-3288.
For EMS services on the NJ side, we have established direct contact numbers to EMS dispatchers in each county.
Camden County (NJ 1&2) - 856-757-7502
Gloucester County (NJ 3&4) - 856-589-0911
Salem County (NJ 5,6,7,8,9,10&11) - 856-769-2959
Hyperbaric Chamber is located at University of Pennsylvania Hospital.

ICS 220 - Air Operations

Incident:	MV Athos I	**Prepared By:**	Section, Planning	**at** 12/6/2004 07:23
Period:	Period 12 (12/8/2004 06:00 - 12/9/2004 06:00)	**Version Name:**	Air Ops	

Personnel and Communications

Title/Position	Name	Air/Air Frequency	Air/Ground Frequency	Phone
Air Ops Branch Director	Brad Barker	VHF 123.05		985-381-0697

Planned Flight Information

Type Of Aircraft	Operating Base	Aircraft Company	Passenger Capacity	Purpose	Scheduled Flights
Bell 206 L	Pier 36	Horizon	5	Surveillance N98KR	As Needed, Available 08:30
Bell Jet Ranger	Pier 36	Analar	3	N50178	08:30

Notes (Special Instructions, Safety Notes, Hazards, Priorities)

Refrain from air ops in the following areas: (Known Eagle Nesting Areas)
Petty Island
Mantua Creek
Monds Island

Operational Requirements:
1/4 mi. radius
>= 500' AGL

If single engine without floats, no open water operations. All operations <300 AGL MUST be conducted within 1/8 miles of shore

All air operation to terminate NLT 1430

First overflight (ops) shall verify boom is in place around sensitive sites in accordance with protection strategies. Inflatable vest required to be worn on all open water flights.

If injured/contaminated wildlife is sighted, contact the Situation Unit at 267-765-3440/3437/3443/3444

© 1997-2004 dbSoft, Inc.

Incident Name:	MV ATHOS I	Location:	Philadelphia, PA

Three Day Weather Forecast

Dec 8 Wednesday

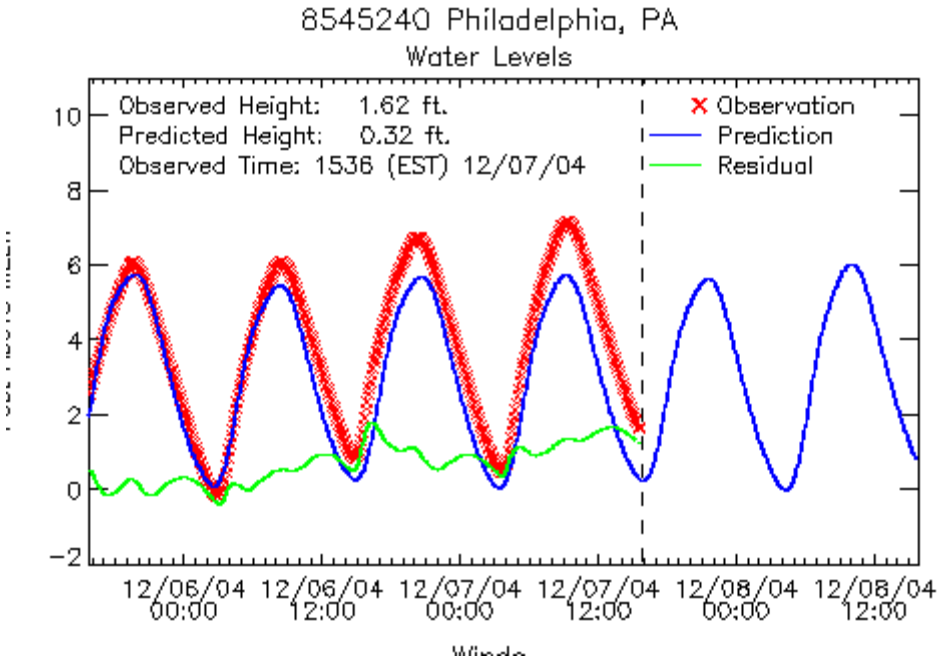
Partly cloudy skies, dry. Winds from the west 15-20 knots; gusts to 25, shifting from the NW at 10-15 knots by afternoon. At night, winds at 5-10 from the NW. Seas 1-2 ft. High 59F, Low 36F.

Dec 9 Thursday

Partly cloudy skies; dry weather diminishing to a chance of evening rain. Variable winds at 5 knots or less forecast to shift and be from the south at 5 knots or less by afternoon hours. At night, SE winds at 5 knots. Seas 1 ft. or less. High 52F, Low 47F.

Dec 10 Friday

Mostly cloudy skies; chance of rain. Winds from the SE at 5-10 knots shifting from the south at 10-15 knots with gusts to 25 knots by the afternoon hours. High 57F, Low 45F.



TO: ALL PERSONNEL

- **All safety rules are to be followed.**
- **Look out for your fellow responders.**
- **Use Common Sense.**
- **Do Not Take Chances.**
- **If unsafe, STOP and talk to your supervisor.**
- **ZERO Injuries is our goal.**

Site Description: On-Water & Shoreline Cleanup Activities

Potential Hazards: Slippery and uneven surfaces; exposure to weathered oil; cold/heat exposure; slips, trips, and falls; slippery surfaces while conducting boat operations.

General Safety Concerns:

SPECIAL CAUTION:
STAY CLEAR OF DIVING OPERATIONS BY AT LEAST 200 YDS. THIS WILL BE STRICTLY ENFORCED!

ADHERENCE TO ALL PPE REQUIREMENTS

Level D (no known hazard(s))

- **Tyvek-type and /or rain gear.**
- **Hard hat when overhead hazards exist**
- **Safety glasses/goggles/face shield**
- **Work shoes**
- **Disposable boots**
- **Chemical resistant gloves**
- **Hearing protection**

NOTE: Eye Protection is NOT OPTIONAL. ANSI Approved Safety Eye Wear with Side Shields is the minimum eye protection requirement for all activities.

Personal Flotation Equipment (PFDs) are required to be worn properly—fully secured—when working on or near the waters edge. UNSECURED PFDs MEANS NO PFDs!

Gloves and sleeve area and boot and pant leg area should be taped to prevent contact with product.
Use of tobacco products of any kind and eating/drinking is restricted to designated areas only and only following proper personal decon-tamination. Contractors should clearly designate break/rest areas. Otherwise such activity is prohibited.

Special notes:

- **In the event clean up activities involve entry to industrial/commercial facilities, safety rules of the facility will apply as long as the safety rules do not contradict this Plan.**
- **ALL INJURIES REGARDLESS OF SEVERITY MUST BE REPORTED TO THE OPERATIONS CENTER AND SAFETY IMMEDIATELY AND A INCIDENT REPORT MUST BE FORWARDED VIA THE FIELD SAFETY REPRESENTATIVE**
- **ALL PERSONNEL VISITING THE HOT ZONE MUST BE WEARING THE APPROPRIATE PPE.**
- **Handling of distressed or dead animals is restricted to agency personnel. If found, report to the area supervisor who will notify the appropriate person.**

Commercial Diving Operations

The following are Health and Safety requirements for all commercial diving operations.

Qualifications of dive team:

- Each dive team member shall have the experience or training necessary to perform assigned tasks in a safe and healthful manner.
- Each dive team member shall have experience or training in the following:
  - The use of tools, equipment and systems relevant to assigned tasks;
  - Techniques of the assigned diving mode: and
  - Diving operations and emergency procedures.
- All dive team members shall be trained in cardiopulmonary resuscitation and first aid (American Red Cross standard course or equivalent).
- Dive team members who are exposed to or control the exposure of others to hyperbaric conditions shall be trained in diving-related physics and physiology.
- Each dive team member shall be assigned tasks in accordance with the employee's experience or training, except that limited additional tasks may be assigned to an employee undergoing training provided that these tasks are performed under the direct supervision of an experienced dive team member.
- The employer shall not require a dive team member to be exposed to hyperbaric conditions against the employee's will, except when necessary to complete decompression or treatment procedures.
- The employer shall not permit a dive team member to dive or be otherwise exposed to hyperbaric conditions for the duration of any temporary physical impairment or condition which is known to the employer and is likely to affect adversely the safety or health of a dive team member.
- The employer or an employee designated by the employer shall be at the dive location in charge of all aspects of the diving operation affecting the safety and health of dive team members.
- The designated person-in-charge shall have experience and training in the conduct of the assigned diving operation.

Safe Practices Manual

- The employer shall develop and maintain a safe practices manual which shall be made available at the dive location to each dive team member.
- The safe practices manual shall contain a copy of this standard and the employer's policies for implementing the requirements of this standard.
- For each diving mode engaged in, the safe practices manual shall include:
  - Safety procedures and checklists for diving operations;
  - Assignments and responsibilities of the dive team members;
  - Equipment procedures and checklists; and

- Emergency procedures for fire, equipment failure, adverse environmental conditions, and medical illness and injury.

Pre-dive procedures

- The employer shall comply with the following requirements prior to each diving operation, unless otherwise specified.
- *Emergency aid.* A list shall be kept at the dive location of the telephone or call numbers of the following:
- An operational decompression chamber (if not at the dive location);
  - As per medical plan, a hyperbaric chamber is located at UPENN Hospital (215) 662-3920
  - Accessible hospitals (Listed on ICS form 206 – Medical plan);
  - Available physicians (Listed on ICS form 206 – Medical plan);
  - Available means of transportation; and
  - A first aid kit appropriate for the diving operation
- When used in a decompression chamber or bell, the first aid kit shall be suitable for use under hyperbaric conditions.
- In addition to any other first aid supplies, an American Red Cross standard first aid handbook or equivalent, and a bag-type manual resuscitator with transparent mask and tubing shall be available at the dive location.
- *Planning and assessment.* Planning of a diving operation shall include an assessment of the safety and health aspects of the following:
  - Diving mode;
  - Surface and underwater conditions and hazards;
  - Breathing gas supply (including reserves);
  - Thermal protection;
  - Diving equipment and systems;
  - Dive team assignments and physical fitness of dive team members (including any impairment known to the employer);
  - Repetitive dive designation or residual inert gas status of dive team members;
  - Decompression and treatment procedures (including altitude corrections); and
  - Emergency procedures.
- *Hazardous activities.* To minimize hazards to the dive team, diving operations shall be coordinated with other activities in the vicinity which are likely to interfere with the diving operation.
- Dive team members shall be briefed on:
  - The tasks to be undertaken;
  - Safety procedures for the diving mode;
  - Any unusual hazards or environmental conditions likely to affect the safety of the diving operation; and

- Any modifications to operating procedures necessitated by the specific diving operation.

- Prior to making individual dive team member assignments, the employer shall inquire into the dive team member's current state of physical fitness, and indicate to the dive team member the procedure for reporting physical problems or adverse physiological effects during and after the dive.
- *Equipment inspection.* The breathing gas supply system including reserve breathing gas supplies, masks, helmets, thermal protection, and bell handling mechanism (when appropriate) shall be inspected prior to each dive.
- *Warning signal.* When diving from surfaces other than vessels in areas capable of supporting marine traffic, a rigid replica of the international code flag "A" at least one meter in height shall be displayed at the dive location in a manner which allows all-round visibility, and shall be illuminated during night diving operations.

Record keeping

The employer shall record the occurrence of any diving-related injury or illness which requires any dive team member to be hospitalized for 24 hours or more, specifying the circumstances of the incident and the extent of any injuries or illnesses.

Danger: Medical Waste and Needles

Protect yourself from needle sticks and contact with medical waste while picking up debris from the shoreline area. All types of debris wash up on the shoreline including medical waste such as used hypodermic needles.

Be Cautious while picking up debris.

If you see medical waste such as hypodermic needles notify your supervisor immediately. Use grabbing tools to pick up debris—**do not pick up with your hands**.

If you are stuck by a needle immediately notify your supervisor who will arrange for medical attention.

Why do you need medical attention?

Because needle stick injuries can expose workers to a number of bloodborne pathogens that can cause serious or fatal infections. The pathogens that pose the most serious health risks are:

- Hepatitis B virus (HBV)
- Hepatitis C virus (HCV)
- Human immunodeficiency virus (HIV) -- the virus that causes AIDS

To date only one hypodermic needle has been report along the shoreline. But there is always the possibility of more hypodermic needles and other medical waste.

Be very careful!

Sharps containers and medical waste will be provided in each work area. All sharps like hypodermic needles must be disposed of in sharps containers and medical waste such as used bandages must be disposed of in the appropriate medical waste bag.

DECONTAMINATION

Where personal protection equipment is an assist to keep spilled product off clothing and bare skin, decontamination is a process specifically designed to remove any contamination from equipment and personal protective equipment.

Personnel decon stations are available in all work Divisions. All personnel are required to decon prior to leaving active work areas or any area where they could be in contact with the spilled product.

The following requirement applies to all field personnel and those visiting field operations:

Everyone is required to wear Personal Protective Equipment (PPE) and to decontaminate when leaving the work area.

SAFE USE OF PRESSURE WASHERS & STEAM CLEANERS

Work to Be Done: Removal of contaminants from equipment, shoreline, piers, and similar structures.

Equipment: Steam cleaners, and pressure washers powered by internal combustion engines.

Site Description: Various types of work surfaces, rocks, sand, oily surfaces.

Potential Hazards: Slips, trips, falls, steam burns, injuries from excess pressure, injuries from hot surfaces on the hotsy or pressure washers, insect and animal bites, and potential drowning.

Special notes: All personnel while working will adhere to the following precautions with steam cleaners and pressure washers:

- All personnel will wear proper personal protective equipment when working operating the steam or pressure wands or assisting personnel using this equipment. This will include Tyvek coveralls, rubber boots, nitrile or neoprene gloves, **face shield with clear or tinted safety glasses with side shields under the shield**.
- All personnel working with or around the pressure washers or steam cleaners must wear regular safety glasses at a minimum.
- **Equipment operators should never direct the power spray of the wand to themselves or other personnel.** Steam washers are for decontamination of equipment only. Personal Protective Equipment should not be washed or decontaminated by using steam or power washers.

- Prior to starting the equipment caution should be exercised when filling the tank with gasoline. No smoking will be allowed in the area while equipment is being refueled. Prior to startup all hoses and wand should be connected and rechecked to ensure the connections are secure.
- All supply and wand hoses should be free of kinks and where possible secured to not present a tripping hazard to other personnel.
- Operators should be cautious when using the rope pull to start the engine. Wet hands, slippery hands, pulls or frayed pull rope can lead to injury.
- Operators should ensure that personnel in the area are a safe distance from the wand and equipment operations.
- Noise surveys should be taken to check noise exposure to workers. Generally personnel working on or within 5 feet of a steam, or pressure should wear hearing protection.
- When working within ten feet of water that is 3 feet or more in depth, Personal Flotation Devices (PFD's) must be worn. Non-swimmers working near the edge of the water must wear PFD's at all times.
- Contaminated areas, where personnel are working, should be marked and barricaded, and the surface covered to prevent spread of contamination. NOTE: If plastic is used for coverage of the surfaces, personnel must exercise care when walking on the plastic surfaces as they can become slick with a combination of contaminant and water. The wearing of rubber oil resistant non-skid boots or the use of cloth covering on the surface instead of plastic is preferable.

- Wand levers should always be held and triggered by the operator's hand. At no time should the lever be wired or taped in the open position.

ICS 230 - Daily Meeting Schedule

Incident:	MV Athos I	**Prepared By:** Planning Section	**at** 12/7/2004 16:00
Period:	Period 12 (12/8/2004 06:00 - 12/9/2004 06:00)	**Version Name:**	12/08/04 Meeting Schedule

Meeting Name & Date/Time	Purpose	Attendees	Location
Operations Briefing 12/8/2004 06:00	Present IAP and assignments to the supervisors/leaders for the next operational period.	IC, COMMAND STAFF, GENERAL STAFF, SUL, RUL, SAM, COMMS UNIT, BRANCH DIRECTORS, TASK FORCE/STRIKE TEAM LEADERS, & GROUP LEADERS.	Holiday Inn
UC Objectives Meeting 12/8/2004 08:00	Review/Identify and prioritize objectives for the next operational period.	UC members	Penn Room
ICS 209 12/8/2004 09:00	Resource Summary	Planning Section	Cmd Post
Command & General Staff Meeting 12/8/2004 09:00	Situation Brief; Coordinate Command Staff functionc, responsibilities and objectives	General Staff members	Sherman Room
RRT 12/8/2004 10:00	Informational brief	Atlantic Strike Team	Holiday Inn
Field Reports 12/8/2004 10:00	Field reports to Situation Unit Leader at 267-765-3448/3446	Phone Call	
Tactics Meeting 12/8/2004 12:00	Develop primary and alternate strategies to meet incident objectives for the next operational period	PSC, OPS, LSC, EUL, RUL, SUL, & SCRIBE	Sherman Room
Field Reports 12/8/2004 14:30	Field reports to Situation Unit Leader at 267-765-3448/3446	Phone Call	
Scientific Support Meeting 12/8/2004 15:00	Review Scientific Support Issues	Scientific Support Personnel	Hancock Room
Planning Meeting 12/8/2004 16:00	Define/Review incident objectives, strategies, and tactics and identifies resource needs for the next operational period.	UNIFIED COMMAND, COMMAND STAFF, OPC, LSC, FSC, RUL, SUL, EUL, DUL, COMMS UNIT, & TECHNICAL SPECIALIST	Sherman Room
IAP Approval 12/8/2004 18:30			
Sit Rep 12/8/2004 20:00

T/V ATHOS I SPILL, DELAWARE RIVER, NEW JERSEY
1400 EST, Thursday December 23, 2004

NOTE: This is a site-specific forecast from the National Weather Service generated specifically for the incident site.

Sunset (12/23): 1640

Sunrise (12/24): 0720
Sunset (12/24): 1641

36 Hour Forecast:

Winds:
This evening, the winds are expected to be from the SW at 15 to 25 knots, with gusts around 40 kt possible, then becoming NW 15 to 25 knots after midnight. Friday, NW 10 to 20 knots, Friday night, NW 5 to 10 knots.

Waves:
Tonight, the seas are expected to be 1 to 2 feet. Friday and Friday night, 1 foot or less.

Precipitation:
Tonight, a chance of showers early (till about 8pm)…then dry through the weekend.

Ceiling/Visibility:
Tonight, cloudy early, then partly cloudy. Friday and Friday night, partly cloudy.

Temperatures:
Tonight, the low is expected to be in the low 30s, with wind chill in the mid to upper 20s. Friday, temperatures are expected to be in the upper 30s. Friday night, the low is predicted to be in the lower 20s.

Extended Forecast:

Saturday, NW winds 10 to 15 knots. Seas 1 to 2 feet. Partly Cloudy skies are expected. Highs in the upper 20s. Dry.

Sunday, NW winds 5 to 10 knots becoming W. Seas 1 foot. Clear Skies. Dry.

Monday, W winds 5 to 10 knots becoming SW. Seas 1 foot. Clear Skies. Dry.

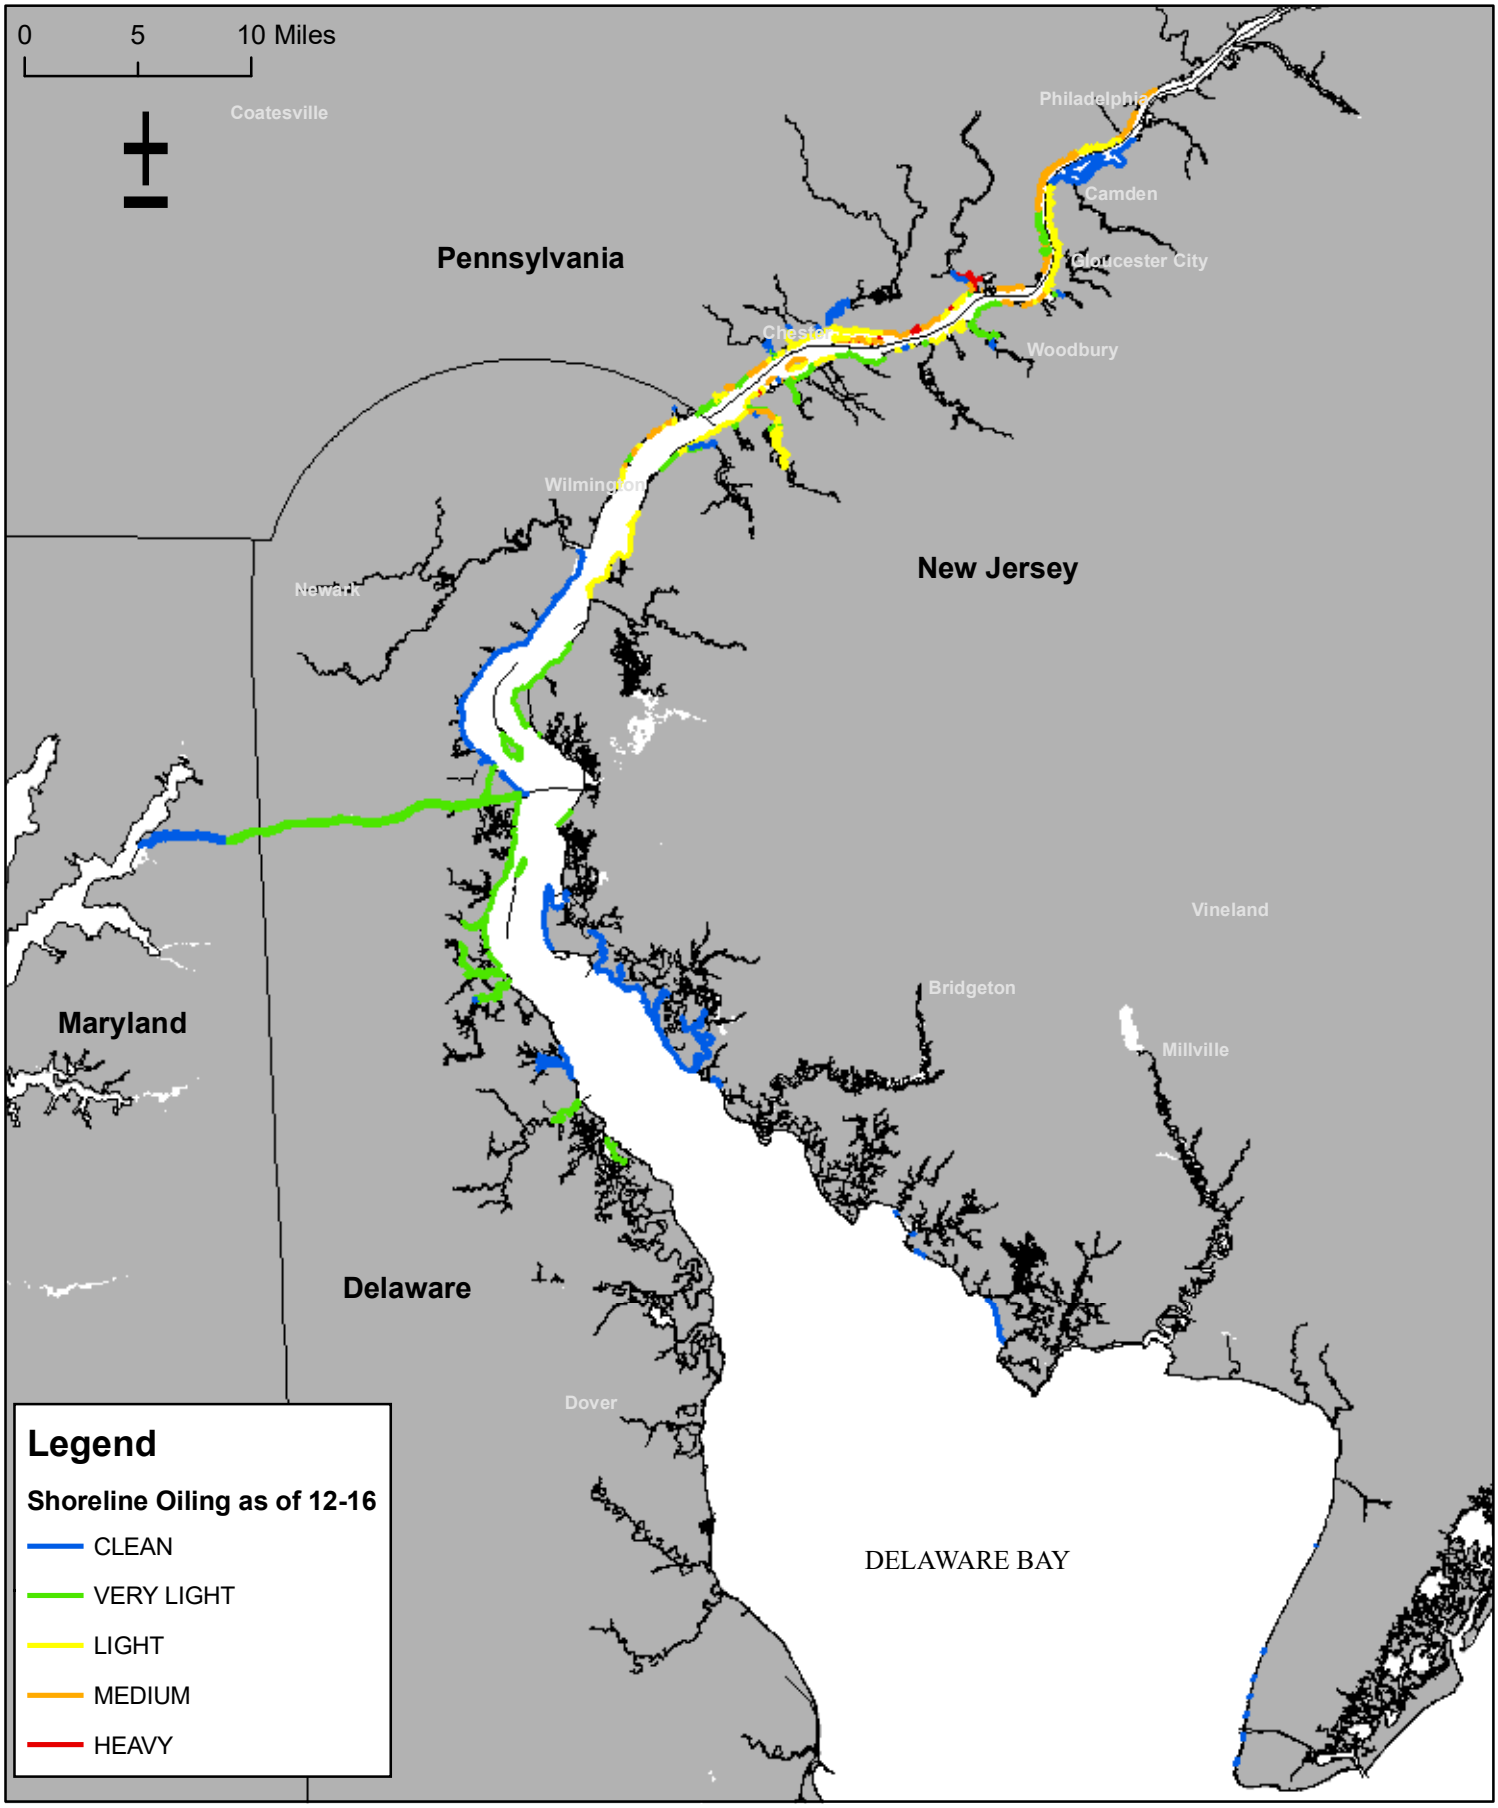
Tuesday, SW winds 5 to 10 knots. Seas 1 foot. Partly Cloudy Skies. Dry.

M/V Athos I, Delaware River, NJ/PA

Shoreline Oiling as of 12/16/2004

Graphic does not represent precise amounts or locations of oil.

USE ONLY AS A GENERAL REFERENCE



Objective:

Removal of gross oil before the focus is shifted to final cleanup activities

Gross (i.e., bulk) oil removal is proposed as a means to maximize the environmental benefit and effectiveness of shoreline cleanup operations. Shoreline segments have been prioritized (attached) based on the amount of oil, and the presence of sensitive resources or high public access.

As cleanup activities complete gross oil removal, response resources will be redeployed by the Operations Section according to the listed priorities. The decision to move the resources within a division will be the responsibility of the Division Supervisors. The Environmental Unit and SCAT Teams will be available to provide suggestions and/or guidance.

Operations Priorities for Cleanup

Priority 1 Heavy Oil With Special Issues	Priority 2 Heavy Oil No Special Issues	Priority 3 Moderate Oil With Special Issues	Priority 4 Moderate Oil No Special Issues	Priority 5 Light Oil With Special Issues	Priority 6 Very Light Oil With Special Issues	Priority 7 Light Oil No Special Issues	Priority 8 Very Light Oil No Special Issues

Memorandum

To: **Operations Section Chief**

From: **Group Supervisor, Wildlife Recovery**

Subject: **Protocol for handling dead wildlife carcasses found during shoreline cleanup.**

As workcrews are cleaning oiled-shorelines and structures or removing oiled-debris they are likely to encounter dead oiled wildlife. Please handle wildlife carcasses as follows.

A. Dead Oiled Wildlife

All dead oiled wildlife (birds, fish, mammals, turtles) shall be bagged and held for the Wildlife Recovery Unit, and not disposed with other oiled material.

1. **Carefully approach the carcass and confirm that it is dead. If the animal is not dead do not attempt to capture it – contact the Wildlife Recovery Unit immediately for instructions.**

2. **If the animal is confirmed to be dead, place the carcass into a plastic bag – DO NOT mix carcasses together in the same bag – ONE carcass per bag.**

3. **Tie the bag closed and give it to the crew leader.**

4. **The crew leader shall immediately notify the Wildlife Recovery Triage Center at 215-365-1558 to have the carcasses picked up – do not leave bagged oiled carcasses unattended in the field.**

B. Live Oiled Wildlife

Clean up crews shall not attempt to capture live wildlife.

1. **Live oiled wildlife seen during clean up efforts should be reported by the crew leader to the Wildlife Recovery Triage Center at 215-365-1558 and relay the location, time, number and types of oiled wildlife seen.**

If you have any questions, please contact me at 609-214-7895.

Emailed to: **theo.camlin@theobriensgroup.com**

Dorthy_Manera@fws.gov
John_Meehan@fws.gov

cc: Documents Unit Leader

Conduct cleanup with minimal damage to environmental resources. i.e. Do not drive spilled oils into sediments by foot / mechanical traffic

A SCAT Special Issue Team (SIT) will evaluate historic, special environmental, or high-public access areas to provide more detailed and additional cleanup requirements.

Shoreline Type	Cleanup Endpoint	Allowable Cleanup Methods
Sand Flats (hard surface e.g. Tinicum I. NJ side)	General: No recoverable surface oil, buried oil layers or tarballs larger than dimes; no more than stain on sand	Manual removal with shovels/rakes and squeegees; small equipment (bobcat) to remove oil and oiled surface and subsurface sand; minimize removal of clean sand on and under oiled layers; Minimize equipment (bobcat) travel over oiled surfaces.
	Special: TBD by SIT (Special Issue Team)	
Sand Beaches; Mixed Sand and Fine Gravel Beaches	General: No recoverable surface oil, buried asphalt pavements or tarballs larger than dimes; no more than stain on gravel	Manual removal with shovels/rakes; minimize removal of clean sediments on/under oiled layers; small equipment (bobcat)to remove oil and oiled surface/subsurface sand and gravel. Minimize small equipment (bobcat)travel over oiled surfaces. Mechanical relocation of fine gravels into piles for flushing, including use of high-pressure/hot-water washing (hotsie), with containment/recovery of released oil; return gravel to original location and contour. Use of heavy equipment will require additional approval.
	Special: TBD by SIT	
Course Gravel Beaches/Fill (e.g. cobbles, and larger)	No more recoverable or potentially mobile oil on surface, doesn't rub off on contact Visible heavy product that could be mobilized should be removed.	Manual removal of surface oil using low pressure flushing and high-pressure/hot-water washing (hotsie), with containment/recovery of released oil; return gravel to original location and contour. Use of heavy equipment will require additional approval by the SIT.
	Special: TBD by SIT	
Riprap/Stone Seawalls **Solid Seawall, Bulkheads and Docks**	General: No more recoverable or potentially mobile oil on surface, doesn't rub off on contact Visible heavy product that could be mobilized should be removed.	Flushing and high-pressure/hot-water washing (hotsie), as needed. Containment/recovery of released oil.
	Special: No more recoverable or potential mobile oil on surface; Stop cleanup efforts when all oil is removed other than a stain. Additional cleaning or replacement of riprap to be considered by SIT.	In high-public access or special environmental / historic areas (e.g., Ft. Mifflin, eagle nesting, others to be determined): may request use of SWAs (surface washing agents) or special cleanup efforts for use as need to meet endpoint.

Mud Flats (e.g. soft surface, steps will push oil in sediments)	General: No potentially mobile oil.	To be determined on a site-specific basis by SIT.
Marshes	General: Oil on vegetation no longer wipes off on contact. No remaining recoverable or potentially mobile oil in accessible areas. (Accessible areas will be identified by SIT.)	To be determined on a site-specific basis by SIT. Options (cutting, In-situ-Burn, flushing, manual pickup of pooled oil, monitoring) to be determined on site-specific basis.
	Special: Other removal options will be considered by Environmental Unit.	

Debris Recovery Guidelines[1]

- Report dead and live wildlife to triage center at 215-365-1558. Collect and bag all dead wildlife.
- Manual removal of oiled debris that can be easily picked up and bagged.
- For small unoiled debris that can be easily picked up, move to the supra tidal zone if it has the potential to become oiled in its current location.
- Leave unoiled debris in place if it does not have the potential to become oiled.
- Cut and remove oiled logs < 6 inches in diameter (cut in into lengths < 6 feet).
- Manual removal of oiled debris (other than logs) < 6 inches in diameter and < 6 feet in length.
- Clean large (> 6 inches in diameter and/or 6 feet in length) oiled debris in place. Recover oil using appropriate sorbents. Approved cleaning methods for large oiled debris are presented below:

Method	Handling	RRT Approval	Special Permits
Scraping	No	No	No
Wiping	No	No	No
Hotsie	No	No	No

The following options require special approval

Method	Handling	RRT Approval	Special Permits
SWAs	No	Yes	No
Burning	Yes	Yes	Yes

For questions regarding environmental issues, contact Lyle Trumbull at (610) 710-1919.

[1] Non-living oiled debris

ICS 202 - General Response Objectives

Incident:	MV Athos I	**Prepared By:**	Planning Section **at** 12/23/2004 10:36
Period:	Period 21 (12/24/2004 06:00 - 12/28/2004 06:00	**Version Name:**	Unified Command Objectives

Overall and Tactical Objectives

	Assigned To	Status
Conduct operations in accordance with the site safety plan.		
Continue to clean waterfront facilities per facility priority list.		
Decon of vessels as needed, including recreational vessels.		
Continue to enforce safety zone.		
Continue aggressive gross shoreline cleanup and disposal operation.		
Continue to assess the location and extent of oil impact.		
Monitor areas of special interest for possible submerged oil threat (water column monitoring, water intake consortium)		
Effect temporary repairs to vessel and facilitate/support investigation.		
Collect, recover, and rehabilitate injured wildlife.		
Continue to keep stake holders and public informed.		
Unified Command Emphasis:		
• Make Safety a Top Priority. Adhere to SSP and watch out for your fellow responders.

Incident:	MV Athos I	**Branch:**	Operations Section
Period:	Period 21 (12/24/2004 06:00 - 12/28/2004 06:0(	**Division/Group:**	Decon Group
Prepared By Signature:		**Task Force:**	Vessel / Pier Decon Task Force
Approved By Signature:			

Assignments

As directed clean piers and vessels.

Special Equipment / Supplies Needed for Assignment

All unused equipment should be immediately returned to Staging for redeployment.

Special Site-Specific Safety Considerations

- Safety: Ensure proper PPE such as face shields are used during pressure washing operations.

Additional Information

- Conduct decon ops in accordance with the Cleanup Priority List as environmental conditions permit.

12 Task Forces Total (see attachment immediately following this 204):

Please review attached protocol for handling dead wildlife carcasses.

Wake incidents should be reported to the USCG at 267-549-4848. Must work outside Safety Zone established by Waterways Management.

Incident Resources - Manpower

Supplier	Resource Type	Description	Quantity	Size	Status
Wildlife Recovery Group					
TBD	Manpower: Responder	Responders	31 each		Assigned
Trade Winds	Manpower: Responder	Responders	1 each		Assigned

Assignments

Identify, recover, and rehabilitate any impacted wildlife. Wildlife recovery teams will advise Situation Unit and group supervisor of any observed shoreline oil impact. Provide technical assistance on any wildlife related issues.

Special Instructions for Division / Group

Wildlife recovery teams will advise Situation Unit and group supervisor of any observed shoreline oil impact.

Special Equipment / Supplies Needed for Assignment

All unused equipment should be immediately returned to Staging for redeployment.

Special Environmental Considerations

Report endangered species observations to the Group Supervisor.

Special Site-Specific Safety Considerations

Review Site Safety Plan (Contractors) With Special Attention To PPE, Slips, and Trips & Falls. All Personnel Are Required To Follow Decon Procedures In Site Safety Plan.

Additional Information

Call 267-765-3447 from 1000-1100 and validate if you have any resource numbers different than listed on this form. This is critical to allow us to plan properly and ensure you will have the resources you need to do your job tomorrow. Report situation status to the Situation Unit Leader each day at 0900, 1300, and 1600 hrs. 267-765-3446/3448.

Fax all equipment and personnel Check-in Sheets to 215-293-4476 with an attention line to "Resource Unit."

Please review attached protocol for handling dead wildlife carcasses.

Incident:	MV Athos I	**Branch:**	Near/On Shore Recovery Branch
Period:	Period 21 (12/24/2004 06:00 - 12/28/2004 06:0(	**Division/Group:**	NJ-3 Division
Prepared By Signature:		**Task Force:**	
Approved By Signature:			

Incident Resources - Manpower

Supplier	Resource Type	Description	Quantity	Size	Status
NJ-3 Division					
Accurate Marine Environmen	Manpower: Responder	Responders	40 each		Assigned
Atlantic Response, Inc.	Manpower: Responder	Responders	23 each		Assigned
Clean Harbors Environmenta	Manpower: Responder	Responders	22 each		Assigned
ES&H Environmental Service	Manpower: Responder	Responders	64 each		Assigned
Fleet Environmental Services	Manpower: Responder	Responders	46 each		Assigned
Industrial Cleanup, Inc. - ICI	Manpower: Responder	Responders	30 each		Assigned
Kens Marine Service	Manpower: Responder	Responders	47 each		Assigned
NRC - National Response Cc	Manpower: Responder	Responders	1 each		Assigned

Assignments

Shoreline cleanup

Special Instructions for Division / Group

Overflight information will be supplemented by on water observations.

Location of Work

See Division Overview Map.

Special Equipment / Supplies Needed for Assignment

All unused equipment should be immediately returned to Staging for redeployment.

Special Environmental Considerations

Cut no wetland vegetation without state approval. Do not walk through or work in Mud Flats. Report oiled wildlife to situation unit.

Special Site-Specific Safety Considerations

Review Site Safety Plan (Contractors) With Special Attention To PPE, Slips, and Trips & Falls. All Personnel Are Required To Follow Decon Procedures In Site Safety Plan.

Additional Information

Report situation status and resource status each day at 1000 and 1430 hrs. 267-765-3446/3448/3447. This is critical to allow us to plan properly and ensure you will have the resources you need to do your job tomorrow.

Fax all equipment and personnel Check-In sheets to 215-923-4476 with an attention line to "Resource Unit"

Please review attached protocol for handling dead wildlife carcasses.

Wake incidents should be reported to the USCG at 267-549-4848. Must work outside Safety Zone established by Waterways Management.

Special Medical Emergency Procedures

Document all incident related injuries/illnesses. Report to Medical Unit Leader and Safety
Communicate any and all loss of degradation of medical services/resources to the Incident Commander (IC)
Paramedics & mobile unit are stationed on PA side at Staging Area #3 - Lagoon.
To contact EMS at Staging Area #3 - Lagoon, call Nick Federoff - 609-425-3288.
For EMS services on the NJ side, we have established direct contact numbers to EMS dispatchers in each county.
Camden County (NJ 1&2) - 856-757-7502
Gloucester County (NJ 3&4) - 856-589-0911
Salem County (NJ 5,6,7,8,9,10&11) - 856-769-2959
Hyperbaric Chamber is located at University of Pennsylvania Hospital.

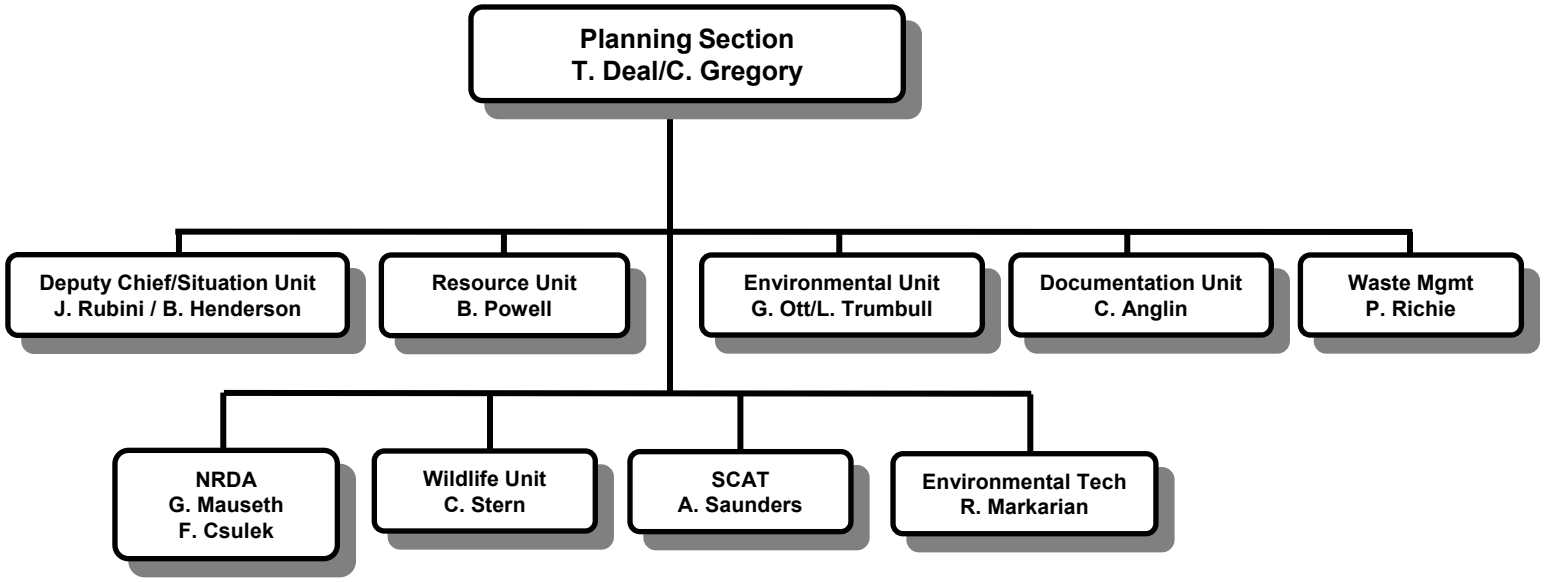
T/V ATHOS I - ICS-207 PLANNING ORGANIZATION CHART – 12/24-12/27/04



Incident Name: MV ATHOS I	Location: Philadelphia, PA

Three Day Weather Forecast

Dec 23 Thursday

Thursday, SE winds at 15 knots, becoming W at 10-15 knots overnight. Overcast skies are expected, with a chance of rain or showers in the afternoon.
High 52F, Low 32F.

Dec 24 Friday

Friday, W winds at 10-15 knots. Mostly sunny skies. Dry.
High 38F, Low 23F.

Dec 25 Saturday

Partly cloudy. Highs in the lower 30s.
High 30F, Low 20F.

Tide Table

Bridgeport, Raccoon Creek, New Jersey,
Delaware River, New Jersey
39.8067° N, 75.3550° W

Date	Day	High	Low	High	Low	High	Sunrise	Sunset

12/27/2004	Mon	12:51 AM	7:50 AM	1:06 PM	8:34 PM		7:21 AM	4:43 PM

TO: ALL PERSONNEL

- **All safety rules are to be followed.**
- **Look out for your fellow responders.**
- **Use Common Sense.**
- **Do Not Take Chances.**
- **If unsafe, STOP and talk to your supervisor.**
- **ZERO Injuries is our goal.**

Site Description: On-Water & Shoreline Cleanup Activities

Potential Hazards: Slippery and uneven surfaces; exposure to weathered oil; cold/heat exposure; slips, trips, and falls; slippery surfaces while conducting boat operations.

General Safety Concerns:

ADHERENCE TO ALL PPE REQUIREMENTS

Level D (no known hazard(s))

- **Tyvek-type and /or rain gear.**
- **Hard hat when overhead hazards exist**
- **Safety glasses/goggles/face shield**
- **Work shoes**
- **Disposable boots**
- **Chemical resistant gloves**
- **Hearing protection**

NOTE: Eye Protection is NOT OPTIONAL. ANSI Approved Safety Eye Wear with Side Shields is the minimum eye protection requirement for all activities.

Personal Flotation Equipment (PFDs) are required to be worn properly—fully secured—when working on or near the waters edge. UNSECURED PFDs MEANS NO PFDs!

Gloves and sleeve area and boot and pant leg area should be taped to prevent contact with product.
Use of tobacco products of any kind and eating/drinking is restricted to designated areas only and only following proper personal decontamination. Contractors should clearly designate break/rest areas. Otherwise such activity is prohibited.

Special notes:

- **In the event clean up activities involve entry to industrial/commercial facilities, safety rules of the facility will apply as long as the safety rules do not contradict this Plan.**
- **ALL INJURIES REGARDLESS OF SEVERITY MUST BE REPORTED TO THE OPERATIONS CENTER AND SAFETY IMMEDIATELY AND A INCIDENT REPORT MUST BE FORWARDED VIA THE FIELD SAFETY REPRESENTATIVE**
- **ALL PERSONNEL VISITING THE HOT ZONE MUST BE WEARING THE APPROPRIATE PPE.**
- **Handling of distressed or dead animals is restricted to agency personnel. If found, report to the area supervisor who will notify the appropriate person.**

Cold-Weather Injuries

You are responsible for preventing individual cold injuries such as:

- Chilblain
- Immersion foot (trench foot)
- Frostbite
- Hypothermia
- Dehydration
- Carbon Monoxide Poisoning

Supervisors are responsible for workers health and safety :

⇒ Remembering the acronym **C-O-L-D** when wearing clothing in cold weather
- **C**: Keep it **Clean**;
- **O**: avoid **Overheating**;
- **L**: wear clothing **Loose** and in **Layers**;
- **D**: keep clothing **Dry**.

⇒ Maintaining adequate hydration and ensuring nutritional requirements are met.

General Guidance for all Cold-Weather Work

List of recommended preventive measures to decrease frostbite risk

⇒ **Skin:** Cover exposed skin because it is more likely to develop frostbite. Avoid wet skin (common around the nose and mouth). Inspect hands, feet, face and ears frequently for signs of frostbite.

⇒ **Clothing:** Change into dry clothing whenever clothing becomes wet. Change socks during day.

⇒ **Nutrition:** Consume 4500 calories/day/individual.

⇒ **Hydration:** Consume 3 to 6 Liters of liquid/day/individual. Warm liquids are useful for re-warming.

Cold-Weather Injuries

	Chilblain – Inflammation caused by moist cold
Cause	• Repeated exposure of exposed skin for prolonged periods from 20° – 60° F with high humidity (for those not acclimated to cold weather)
Symptoms	• Swollen, red skin (or darkening of the skin in dark-skinned individuals) • Tender, hot skin, usually accompanied by itching
First-Aid	• Warm affected area with direct body heat • Do not massage or rub affected areas • Do not wet the area or rub it with snow or ice • Do not expose affected area to open fire, stove, or any other intense heat source
Prevention	• Use contact gloves to handle all equipment; never use bare hands • Use approved gloves to handle all fuel products • In extreme cold environments, do not remove clothing immediately after heavy exertion; wait until you are in a warmer location • Do not wear cotton clothing in cold-weather environments

	Hypothermia
Cause	• **Prolonged cold exposure and body-heat loss. May occur at temperatures above freezing, especially when a person's skin or clothing is wet**
Symptoms	• Shivering may or may not be present • Drowsiness, mental slowness, lack of coordination that could progress to unconsciousness, irregular heartbeat, and death
First-Aid	• Get the individual to a medical facility as soon as possible, because hypothermia is the most serious cold exposure medical emergency and can lead to death • Remove wet clothing and wrap victim in blankets or warm clothing • Minimize handling of the unconscious victim with a very low heartbeat so as to not induce a heart attack
Prevention	• Do not wear cotton clothing in cold weather environments • Anticipate the need for warming areas for individuals exposed to cold, wet conditions

	Frostbite
Cause	• **Freezing of exposed skin, such as ngers, toes, ears, and other facial parts** • **Exposure of skin to metal, extremely cool fuel, wind chill, and tight clothing, particularly boots**
Symptoms	• Numbness in affected area • Tingling, blistered, swollen, or tender areas • Pale, yellowish, waxy-looking skin (grayish in dark-skinned soldiers) • Frozen tissue that feels wooden to the touch
First-Aid	• Evacuate immediately, because frostbite can lead to amputation • Start first-aid immediately. Warm affected area with direct body heat • Do not thaw frozen areas if treatment will be delayed • Do not massage or rub affected areas • Do not wet the area or rub it with snow or ice • Do not expose affected area to open fire, stove, or any other intense heat source • Use contact gloves to handle all equipment; never use bare hands
Prevention	• Use approved gloves to handle all fuel products • Do not wear cotton clothing in cold-weather environments • Keep face and ears covered and dry • Keep socks clean and dry • Avoid tight socks and boots

	Immersion foot (trench foot)
Cause	• **Prolonged exposure of feet to wet conditions at 32°– 60°F. Inactivity and damp socks and boots (or tightly laced boots that impair circulation) speed onset and severity**
Symptoms	• Cold, numb feet may progress to hot w/shooting pains • Swelling, redness, and bleeding
First-Aid	• Get medical help immediately • Rewarm feet by exposing them to warm air • Do not allow victim to walk on injury • Evacuate victim to a medical facility • Do not massage, rub, moisten, or expose affected area to extreme heat
Prevention	• Keep feet clean and dry; change wet or damp socks as soon as possible • Wipe the inside of boots dry at least once per day, or more often as feet sweat • Dry leather boots by stuffing with paper towels

	Dehydration
Cause	• Depletion of body fluids
Symptoms	• Dizziness • Weakness • Blurred vision
First-Aid	• Replace lost water. Water should be sipped, not gulped • Get medical treatment
Prevention	• Consume 3-6 quarts of water per day at a minimum

	Carbon Monoxide Poisoning
Cause	• Replacement of oxygen with carbon monoxide in the blood stream from burning fuels without proper ventilation
Symptoms	• Headache, confusion, dizziness, excessive yawning • Cherry red lips and mouth (in light skinned individuals); grayish tint to lips and mouth (in dark skinned individuals) • Unconsciousness
First-Aid	• Move to fresh air • CPR if needed • Administer oxygen if available • Evacuate
Prevention	• Use only project supplied heaters in sheltered areas and ensure that only the vendor operates the heaters • Never sleep in running vehicles

ON-WATER EMERGENCY PROCEDURES

THE SIGNAL FOR

MAN OVERBOARD or **ASSISTANCE IS NEEDED** is:

4 BLASTS FROM AN AIR HORN

The response to the signal is:

- The boat captain/operator will radio to NRC base for assistance.
- All boats in the vicinity will respond to assist.
- All barge operations will cease and assist with rescue operations.
- Boat operators in the vicinity of the incident will assist the rescue operations by pointing or waving to attract attention of responding vessels.

Trimmer Safety Precautions and Working Techniques

Trimmers are high-speed and fast-cutting power tools. The following special safety precautions must be observed to reduce the risk of personal injury:

- A trimmer can be hazardous if not properly used or if it comes in contact with solid objects. If the cutting tool comes in contact with your body, it will cut you.
- Striking solid foreign objects such as stones, fence wire or metal could damage the cutting attachment and may cause blades to crack, chip or break.
- Nearby workers should not be allowed within 15 yards of where a trimmer is in use.
- Never let a trimmer run unattended.
- Prolonged use of a trimmer (or other machines) can expose the operator to vibrations that could reduce the hand's ability to properly sense feel or temperature changes.
  - Many power tools are available with an anti-vibration ("AV") system designed to reduce the transmission of vibrations created by the engine to the operator's hands.
  - Wear gloves and keep your hands warm.
  - Maintain a firm grip at all times, but do not squeeze the handles with constant, excessive pressures, take frequent breaks.

Proper Safety Gear

Trimmer operation can cause serious injury to eyes, ears and person. To reduce the risk of injury the operator will wear safety glasses or goggles with a face shield or face screen over your goggles or safety glasses.

Trimmers produce excessive noise. Wear ear plugs to protect your hearing.

Wear the appropriate clothing.

- Avoid loose-fitting jackets, scarves, neckties, jewelry, flared or cuffed pants, unconfined long hair or anything that could become caught on branches, brush or moving parts of the unit.
- Wear long pants made of heavy material to protect your legs.
- Protect your hands with gloves. Heavy-duty, nonslip gloves improve your grip and help to protect your hands.
- Good footing is most important while trimming. Wear sturdy boots with nonslip soles. Steel-toed safety boots are recommended. Watch your footing.
- Wear an approved safety hard hat to reduce the risk of injury to your head when there is a danger of head injuries.
- If available, use the shoulder/waist harness to reduce operator fatigue.

Refueling Operations

Gasoline is an extremely flammable fuel. If spilled or ignited by a spark or other ignition source, it can cause fire and serious burn injury or property damage. Use extreme caution when handling gasoline or fuel mix, and following the following guidelines:

- Do not smoke or bring any fire or flame near the fuel!

- Gasoline vapor pressure may build up inside the gas tank of a two cycle engine depending on the fuel used, the weather conditions, and the venting system of the tank.
- In order to reduce the risk of burns or other personal injury from escaping gas vapor and fumes, remove the fuel filler cap on your hedge trimmer carefully so as to allow any pressure build-up in the tank to release slowly.
- Never remove fuel filler cap while engine is running.
- Select bare ground for fueling and move at least 10 feet (3m) from the fueling spot before starting the engine.
- Wipe off any spilled fuel before starting your hedge trimmer and check for leakage.
- Check for fuel leakage while refueling and during operation.
  - If fuel-leakage is found, do not start or run the engine until leak is fixed and spilled fuel has been wiped away.
  - Take care not to get fuel on your clothing. If this happens, change your clothing immediately.
  - Never attempt to fuel a running or hot engine.

HEAVY WEATHER ADVISORY #3

Issued 1500, 21 December 2004

Caution State: **ALERT**

Weather for Friday, 12/24 and Saturday, 12/25, Christmas Eve and Christmas Day, has the potential to adversely impact operational activities. Temperatures are predicted to be in the low 30's on Christmas Eve and in the low 20's on Christmas Day. Wind speeds are predicted to be 15-17 mph. However, NOAA and the Weather Channel are predicting higher temperatures on both days between 35 and 40°. We will continue to track the weather for these days.

HEAVY WEATHER ADVISORY HOTLINE: 267-765-3465

HOGG ISLAND SAFETY PLAN

These requirements are to be observed by all personnel participating in operations located along Hogg Island Road. All activities prescribed here will be enforced by safety representatives in the field. The Plan was developed and approved by both the Safety Officer and the Operations Section Chief.

Prohibited Parking

Parking is not permitted on Hogg Island Road from the UPS employee exit north to the UPS truck entrance.

Vehicle Parking

All vehicles should park with the flow of traffic.

No vehicles shall be parked within 15 ft. of the railroad tracks that run adjacent to Hogg Island Road.

All vehicles should be cautious when pulling onto the roadway.

Worksite Provisions

All jobsite staging point must have the following:

- **Designated Smoking Areas.**
- **Flammable Liquid Storage Areas.**
- **Personnel Decontamination Areas.**

ATV Operations

Operators and passengers of all terrain vehicles must wear hard hats.

Passengers are limited to the number of seats available.

At no time shall ATV’s exceed 5mph.

Rail Road Precautions

All individuals who are working within 15 ft. of the railroad tracks must wear a traffic vest and a hard hat.

A trained watchman/lookout must be present any time technicians are required to cross tracks.

Walking along railway is not permitted.

No one is allowed to stand or sit on or near railroad tracks.

Supply traffic should be routed onto access roadway on the East side of the rail road tracks as much as possible.

ICS 230 - Daily Meeting Schedule

Incident:	MV Athos I	**Prepared By:**	Section, Planning	**at** 12/23/2004 10:36
Period:	Period 21 (12/24/2004 06:00 - 12/28/2004 06:00)	**Version Name:**	All for the Period First Day	

Meeting Name & Date/Time	Purpose	Attendees	Location
Operations Briefing 12/24/2004 07:00	Present IAP and assignments to the supervisors/leaders for the next operational period.	IC, COMMAND STAFF, GENERAL STAFF, SUL, RUL, SAM, COMMS UNIT, BRANCH DIRECTORS, TASK FORCE/STRIKE TEAM LEADERS, & GROUP LEADERS.	Sherman Room

ICS 230 - Daily Meeting Schedule

Incident:	MV Athos I	**Prepared By:**	Section, Planning	**at** 12/23/2004 10:36
Period:	Period 21 (12/24/2004 06:00 - 12/28/2004 06:00)	**Version Name:**	All for the Period Fourth Day	

Meeting Name & Date/Time	Purpose	Attendees	Location
Operations Briefing 12/27/2004 07:00	Present IAP and assignments to the supervisors/leaders for the next operational period.	IC, COMMAND STAFF, GENERAL STAFF, SUL, RUL, SAM, COMMS UNIT, BRANCH DIRECTORS, TASK FORCE/STRIKE TEAM LEADERS, & GROUP LEADERS.	Sherman Room
UC Objectives Meeting 12/27/2004 08:00	Review/Identify and prioritize objectives for the next operational period.	UC members	Penn Room
ICS 209 12/27/2004 09:00	Resource Summary	Planning Section	Cmd Post
Command & General Staff Meeting 12/27/2004 09:00	Situation Brief; Coordinate Command Staff functionc, responsibilities and objectives	General Staff members	Sherman Room
Field Reports 12/27/2004 10:00	Field reports to Situation Unit Leader at 267-765-3448/3446	Phone Call	
RRT 12/27/2004 10:00	Informational brief Monday, Wednesday & Friday Only	Atlantic Strike Team	Holiday Inn
Tactics Meeting 12/27/2004 11:30	Develop primary and alternate strategies to meet incident objectives for the next operational period	PSC, OPS, LSC, EUL, RUL, SUL, & SCRIBE	Sherman Room
Scientific Support Meeting 12/27/2004 14:00	Review Scientific Support Issues	Scientific Support Personnel	Hancock Room
Field Reports 12/27/2004 14:30	Field reports to Situation Unit Leader at 267-765-3448/3446	Phone Call	
Planning Meeting 12/27/2004 15:00	Define/Review incident objectives, strategies, and tactics and identifies resource needs for the next operational period.	UNIFIED COMMAND, COMMAND STAFF, OPC, LSC, FSC, RUL, SUL, EUL, DUL, COMMS UNIT, & TECHNICAL SPECIALIST	Sherman Room
IAP Approval 12/27/2004 17:00			
Operations Debriefing 12/27/2004 18:00	Review day's operations	O'Brien's Group	Sherman Room
Sit Rep 12/27/2004 20:00

T/V ATHOS I SPILL, DELAWARE RIVER, NEW JERSEY
1545 EST, Sunday January 16, 2005

Contacts: Ed.Levine@noaa.gov, Gary.Ott@noaa.gov, Marc.Hodges@noaa.gov, Jeff.Lanford@noaa.gov, David.Wesley@noaa.gov, alittle@responsegroupinc.com, blakbell@earthlink.net

NOTE: This is a site-specific forecast from the National Weather Service generated specifically for the incident site. For intermediate request please call the Marine Desk at 800-521-4129 (24 Hours). Temperatures through The period to remain below freezing for the most part with very cold wind chills at night. Our web site www.nws.noaa.gov/er/phi

Sunset (1/16): 1701
Sunrise (1/17: 0720
Sunset (1/17: 1702

36-Hour Forecast:

Winds:
Tonight, northwest winds 10 to 15 knots. Monday northwest winds 15 to 25 knots with gusts to 30 in the afternoon In the middle Delaware Bay. Monday night, North winds 15 to 20 knots. Tuesday, north to northwest 10 to 15 kt. Tuesday Night. West winds 5 to 10 knots.

Waves:
Tonight through Tuesday Night, Seas will be 2 ft in the upper reaches of the Delaware River in the vicinity Of the Spill Site. Farther down the bay, waves will be from 2 to 3 ft tonight, 3 to 4 ft Monday with 5 foot waves below Ship John and Brandywine Lights. Seas will be diminishing late Monday night to 2 to 4 ft and 2 to 3 ft on Tuesday and Tuesday night..

Precipitation:
Tonight, a chance of light snow with accumulation an inch or less. Monday, chance of snow showers in the afternoon with accumulations less than an inch. Monday night, None. Tuesday , None. Tuesday night None.

Ceiling/Visibility:
Partly to mostly cloudy skies are anticipated tonight through Monday night. Tuesday will be sunny. Tuesday night into Wednesday partly to mostly cloudy. The visibility will be reduced to less than 1 nautical mile in heavier snow showers.

Temperatures:
Tonight, in the lower 20s. Mondays high around 30. Monday nights low 15 to 20 degrees. Tuesday highs in the upper 20s. Tuesday night around 15 and the high on Wednesday in the mid 30s. These cold temperatures are harsh conditions for those involved with the cleanup, especially combined with the very cold winch chills which will be below zero at times at night.

Due to the extended cold, there will be light icing on the river banks of the low volume tributaries.
.

Extended Forecast:

Thursday,Partly cloudy with highs in the mid 30s. Northwest winds 10 to 15 knots and seas 2 to 3 ft.

Friday, Partly cloudy with highs in the lower 30s. Northwest winds 10 to 15 knots and seas 2 to 3 ft.

Saturday, Mostly cloudy with a chance of snow. Highs in the lower 30s Winds variable less than 10 knots. Seas 1 ft.

Jim Eberwine

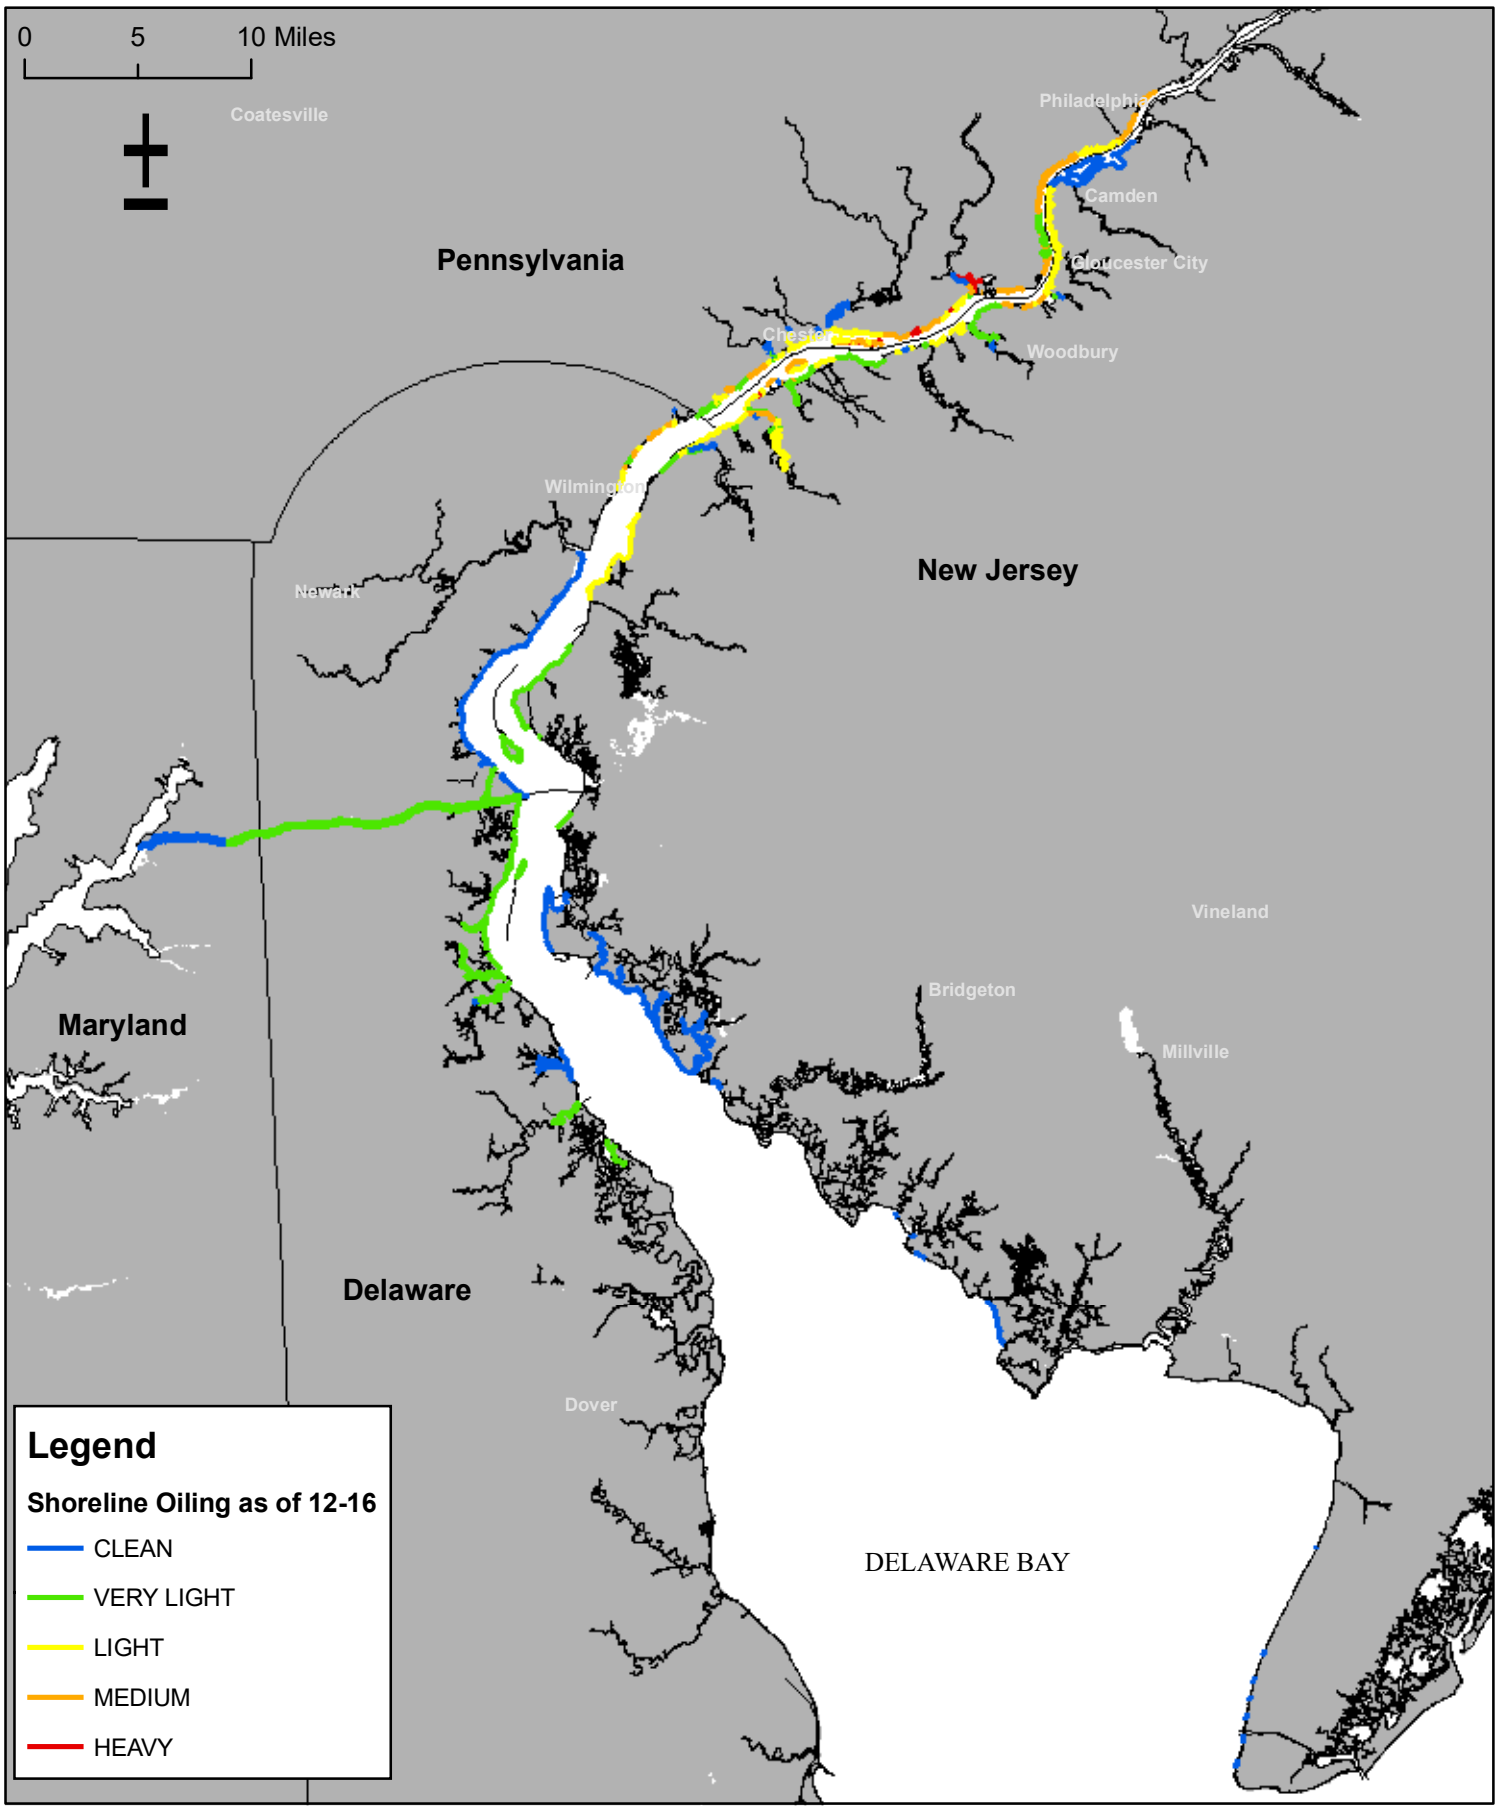
M/V Athos I, Delaware River, NJ/PA

Shoreline Oiling as of 12/16/2004

Graphic does not represent precise amounts or locations of oil.

USE ONLY AS A GENERAL REFERENCE



Objective:

Removal of gross oil before the focus is shifted to final cleanup activities

Gross (i.e., bulk) oil removal is proposed as a means to maximize the environmental benefit and effectiveness of shoreline cleanup operations. Shoreline segments have been prioritized (attached) based on the amount of oil, and the presence of sensitive resources or high public access.

As cleanup activities complete gross oil removal, response resources will be redeployed by the Operations Section according to the listed priorities. The decision to move the resources within a division will be the responsibility of the Division Supervisors. The Environmental Unit and SCAT Teams will be available to provide suggestions and/or guidance.

Operations Priorities for Cleanup

Priority 1 Heavy Oil With Special Issues	Priority 2 Heavy Oil No Special Issues	Priority 3 Moderate Oil With Special Issues	Priority 4 Moderate Oil No Special Issues	Priority 5 Light Oil With Special Issues	Priority 6 Very Light Oil With Special Issues	Priority 7 Light Oil No Special Issues	Priority 8 Very Light Oil No Special Issues

Conduct cleanup with minimal damage to environmental resources. i.e. Do not drive spilled oils into sediments by foot / mechanical traffic

A SCAT Special Issue Team (SIT) will evaluate historic, special environmental, or high-public access areas to provide more detailed and additional cleanup requirements.

Shoreline Type	Cleanup Endpoint	Allowable Cleanup Methods
Sand Flats (hard surface e.g. Tinicum I. NJ side)	General: No recoverable surface oil, buried oil layers or tarballs larger than dimes; no more than stain on sand	Manual removal with shovels/rakes and squeegees; small equipment (bobcat) to remove oil and oiled surface and subsurface sand; minimize removal of clean sand on and under oiled layers; Minimize equipment (bobcat) travel over oiled surfaces.
	Special: TBD by SIT (Special Issue Team)	
Sand Beaches; Mixed Sand and Fine Gravel Beaches	General: No recoverable surface oil, buried asphalt pavements or tarballs larger than dimes; no more than stain on gravel	Manual removal with shovels/rakes; minimize removal of clean sediments on/under oiled layers; small equipment (bobcat)to remove oil and oiled surface/subsurface sand and gravel. Minimize small equipment (bobcat)travel over oiled surfaces. Mechanical relocation of fine gravels into piles for flushing, including use of high-pressure/hot-water washing (hotsie), with containment/recovery of released oil; return gravel to original location and contour. Use of heavy equipment will require additional approval.
	Special: TBD by SIT	
Course Gravel Beaches/Fill (e.g. cobbles, and larger)	No more recoverable or potentially mobile oil on surface, doesn't rub off on contact Visible heavy product that could be mobilized should be removed.	Manual removal of surface oil using low pressure flushing and high-pressure/hot-water washing (hotsie), with containment/recovery of released oil; return gravel to original location and contour. Use of heavy equipment will require additional approval by the SIT.
	Special: TBD by SIT	
Riprap/Stone Seawalls **Solid Seawall, Bulkheads and Docks**	General: No more recoverable or potentially mobile oil on surface, doesn't rub off on contact Visible heavy product that could be mobilized should be removed.	Flushing and high-pressure/hot-water washing (hotsie), as needed. Containment/recovery of released oil.
	Special: No more recoverable or potential mobile oil on surface; Stop cleanup efforts when all oil is removed other than a stain. Additional cleaning or replacement of riprap to be considered by SIT.	In high-public access or special environmental / historic areas (e.g., Ft. Mifflin, eagle nesting, others to be determined): may request use of SWAs (surface washing agents) or special cleanup efforts for use as need to meet endpoint.

Mud Flats (e.g. soft surface, steps will push oil in sediments)	General: No potentially mobile oil.	To be determined on a site-specific basis by SIT.
Marshes	General: Oil on vegetation no longer wipes off on contact. No remaining recoverable or potentially mobile oil in accessible areas. (Accessible areas will be identified by SIT.)	To be determined on a site-specific basis by SIT. Options (cutting, In-situ-Burn, flushing, manual pickup of pooled oil, monitoring) to be determined on site-specific basis.
	Special: Other removal options will be considered by Environmental Unit.	

Debris Recovery Guidelines[1]

- Report dead and live wildlife to triage center at 215-365-1558. Collect and bag all dead wildlife.
- Manual removal of oiled debris that can be easily picked up and bagged.
- For small unoiled debris that can be easily picked up, move to the supra tidal zone if it has the potential to become oiled in its current location.
- Leave unoiled debris in place if it does not have the potential to become oiled.
- Cut and remove oiled logs < 6 inches in diameter (cut in into lengths < 6 feet).
- Manual removal of oiled debris (other than logs) < 6 inches in diameter and < 6 feet in length.
- Clean large (> 6 inches in diameter and/or 6 feet in length) oiled debris in place. Recover oil using appropriate sorbents. Approved cleaning methods for large oiled debris are presented below:

Method	Handling	RRT Approval	Special Permits
Scraping	No	No	No
Wiping	No	No	No
Hotsie	No	No	No

The following options require special approval

Method	Handling	RRT Approval	Special Permits
SWAs	No	Yes	No
Burning	Yes	Yes	Yes

For questions regarding environmental issues, contact Lyle Trumbull at (610) 710-1919.

[1] Non-living oiled debris

Memorandum

To: **Operations Section Chief**

From: **Group Supervisor, Wildlife Recovery**

Subject: **Protocol for handling dead wildlife carcasses found during shoreline cleanup.**

As workcrews are cleaning oiled-shorelines and structures or removing oiled-debris they are likely to encounter dead oiled wildlife. Please handle wildlife carcasses as follows.

A. Dead Oiled Wildlife

All dead oiled wildlife (birds, fish, mammals, turtles) shall be bagged and held for the Wildlife Recovery Unit, and not disposed with other oiled material.

1. **Carefully approach the carcass and confirm that it is dead. If the animal is not dead do not attempt to capture it – contact the Wildlife Recovery Unit immediately for instructions.**

2. **If the animal is confirmed to be dead, place the carcass into a plastic bag – DO NOT mix carcasses together in the same bag – ONE carcass per bag.**

3. **Tie the bag closed and give it to the crew leader.**

4. **The crew leader shall immediately notify the Wildlife Recovery Triage Center at 215-365-1558 to have the carcasses picked up – do not leave bagged oiled carcasses unattended in the field.**

B. Live Oiled Wildlife

Clean up crews shall not attempt to capture live wildlife.

1. **Live oiled wildlife seen during clean up efforts should be reported by the crew leader to the Wildlife Recovery Triage Center at 215-365-1558 and relay the location, time, number and types of oiled wildlife seen.**

If you have any questions, please contact me at 609-214-7895.

ICS 202 - General Response Objectives

Incident:	MV Athos I	**Prepared By:**	Planning Section **at** 1/10/2005 07:49
Period:	Period 25 (1/18/2005 06:00 - 1/25/2005 06:00)	**Version Name:**	Unified Command Objectives

Overall and Tactical Objectives

	Assigned To	Status
Conduct operations in accordance with the site safety plan.		
Continue to clean waterfront facilities per facility priority list.		
Decon of vessels as needed, including recreational vessels.		
Continue to enforce safety zone.		
Continue aggressive gross shoreline cleanup and disposal operation.		
Continue to assess the location and extent of oil impact.		
Monitor areas of special interest for possible submerged oil threat (water column monitoring, water intake consortium)		
Collect, recover, and rehabilitate injured wildlife.		
Continue to keep stake holders and public informed.		
Unified Command Emphasis:		
• Make Safety a Top Priority. Adhere to SSP and watch out for your fellow responders.

ICS 204 - Assignment List

Incident:	MV Athos I	**Branch:**	Shoreline Cleanup Assessment Team
Period:	Period 25 (1/18/2005 06:00 - 1/25/2005 06:00)	**Division/Group:**	
Prepared By Signature:		**Task Force:**	
Approved By Signature:			

Operations Personnel

Title	Person	Radio	Phone	Pager
Planning Section Chief	D. Sobieski		714-342-6358	
Environmental Unit	L. Trumbull		610-710-1919	
Safety Officer	E. Doyle/A. Gresham		302-293-8959/8960	

Assignments

SCAT on an as-needed basis. Coordinate with Lyle Trumbull.

Special Equipment / Supplies Needed for Assignment

All unused equipment should be immediately returned to Staging for redeployment.

Special Site-Specific Safety Considerations

Review Site Safety Plan(Contractors) With Special Attention To PPE, Slips, and Trips & Falls. All Personnel Are Required To Follow Decon Procedures In Site Safety Plan.

Special safety precautions for cold weather hazards require multi-layered clothing including head and ear covers, gloves, and heavy socks, as well as care when driving or walking on icy surfaces. Be aware of your fellow workers who may become lethargic or non-responsive when exposed to below freezing temperatures as this may indicate the onset of hypothermia. Seek cover and warmth when extremities become numb as this may indicate the onset of frostbite.

Additional Information

Report situation status and resource status each day at 1000 and 1430 hrs. 267-765-3446/3448/3447. This is critical to allow us to plan properly and ensure you will have the resources you need to do your job tomorrow.

Fax all equipment and personnel Check-In sheets to 215-923-4476 with an attention line to "Resource Unit"

Please review attached protocol for handling dead wildlife carcasses.

Wake incidents should be reported to the Waterways Management Branch at 215-271-4889 (7:30am to 4:00pm) or 215-271-4807 (After 4:00pm). Must work outside Safety Zone established by Waterways Management.

ICS 204 - Assignment List

Incident:	MV Athos I	**Branch:**	Deputy Operations Section
Period:	Period 25 (1/18/2005 06:00 - 1/25/2005 06:00)	**Division/Group:**	On-Water Support Branch
Prepared By Signature:		**Task Force:**	
Approved By Signature:			

Special Site-Specific Safety Considerations

Review Site Safety Plan(Contractors) With Special Attention To PPE, Slips, and Trips & Falls. All Personnel Are Required To Follow Decon Procedures In Site Safety Plan.

Special safety precautions for cold weather hazards require multi-layered clothing including head and ear covers, gloves, and heavy socks, as well as care when driving or walking on icy surfaces. Be aware of your fellow workers who may become lethargic or non-responsive when exposed to below freezing temperatures as this may indicate the onset of hypothermia. Seek cover and warmth when extremities become numb as this may indicate the onset of frostbite.

Additional Information

Report situation status and resource status each day at 1000 and 1430 hrs. 267-765-3446/3448/3447. This is critical to allow us to plan properly and ensure you will have the resources you need to do your job tomorrow.

Fax all equipment and personnel Check-In sheets to 215-923-4476 with an attention line to "Resource Unit"

Please review attached protocol for handling dead wildlife carcasses.

Wake incidents should be reported to the Waterways Management Branch at 215-271-4889 (7:30am to 4:00pm) or 215-271-4807 (After 4:00pm). Must work outside Safety Zone established by Waterways Management.

ICS 204 - Assignment List

Incident:	MV Athos I	**Branch:**	New Jersey Branch
Period:	Period 25 (1/18/2005 06:00 - 1/25/2005 06:00)	**Division/Group:**	NJ-3 Division
Prepared By Signature:		**Task Force:**	
Approved By Signature:			

Special Equipment / Supplies Needed for Assignment

All unused equipment should be immediately returned to Staging for redeployment.

Special Environmental Considerations

Cut no wetland vegetation without state approval. Do not walk through or work in Mud Flats. Report oiled wildlife to situation unit.

Special Site-Specific Safety Considerations

Review Site Safety Plan (Contractors) With Special Attention To PPE, Slips, and Trips & Falls. All Personnel Are Required To Follow Decon Procedures In Site Safety Plan.

Special safety precautions for cold weather hazards require multi-layered clothing including head and ear covers, gloves, and heavy socks, as well as care when driving or walking on icy surfaces. Be aware of your fellow workers who may become lethargic or non-responsive when exposed to below freezing temperatures as this may indicate the onset of hypothermia. Seek cover and warmth when extremities become numb as this may indicate the onset of frostbite.

Additional Information

Report situation status and resource status each day at 1000 and 1430 hrs. 267-765-3446/3448/3447. This is critical to allow us to plan properly and ensure you will have the resources you need to do your job tomorrow.

Incident:	MV Athos I	**Branch:**	Pennsylvania / Delaware Branch
Period:	Period 25 (1/18/2005 06:00 - 1/25/2005 06:00)	**Division/Group:**	PA-5 Division
Prepared By Signature:		**Task Force:**	
Approved By Signature:			

Incident Resources - Manpower

Supplier	Resource Type	Description	Quantity	Size	Status
PA-5 Division					
TBD	Manpower: Responder	Responders	3 each		Assigned
Clean Harbors Environmenta	Manpower: Responder	Responders - PA-5	36 each		Assigned
Global Remediation Services	Manpower: Responder	Responders - PA-5	5 each		Assigned
Miller Environmental Group, I	Manpower: Responder	Responders - PA-5	98 each		Assigned
Moran	Manpower: Responder	Responders - PA-5	98 each		Assigned
Clean Harbors Environmenta	Manpower: Supervisor	Supervisors	2 each		Assigned
Global Remediation Services	Manpower: Supervisor	Supervisors	1 each		Assigned
Miller Environmental Group, I	Manpower: Supervisor	Supervisors	4 each		Assigned
Moran	Manpower: Supervisor	Supervisors - PA-5	11 each		Assigned

Assignments

Shoreline cleanup.

Location of Work

See Division Overview Map.

Special Equipment / Supplies Needed for Assignment

All unused equipment should be immediately returned to Staging for redeployment.

Special Environmental Considerations

Cut no wetland vegetation without state approval. Do not walk through or work in Mud Flats. Report oiled wildlife to situation unit.

Special Site-Specific Safety Considerations

Review Site Safety Plan (Contractors) With Special Attention To PPE, Slips, and Trips & Falls. All Personnel Are Required To Follow Decon Procedures In Site Safety Plan.

Special safety precautions for cold weather hazards require multi-layered clothing including head and ear covers, gloves, and heavy socks, as well as care when driving or walking on icy surfaces. Be aware of your fellow workers who may become lethargic or non-responsive when exposed to below freezing temperatures as this may indicate the onset of hypothermia. Seek cover and warmth when extremities become numb as this may indicate the onset of frostbite.

Additional Information

Report situation status and resource status each day at 1000 and 1430 hrs. 267-765-3446/3448/3447. This is critical to allow us to plan properly and ensure you will have the resources you need to do your job tomorrow.

Fax all equipment and personnel Check-In sheets to 215-923-4476 with an attention line to "Resource Unit"

Please review attached protocol for handling dead wildlife carcasses.

Wake incidents should be reported to the Waterways Management Branch at 215-271-4889 (7:30am to 4:00pm) or 215-271-4807 (After 4:00pm). Must work outside Safety Zone established by Waterways Management.

Seven Day Weather Forecast

Jan 18 Tuesday
Wind: NNW 9-14 mph. Mostly sunny in the morning. Then becoming partly cloudy. High 23F, Low 17F.

Jan 19 Wednesday
Wind: SSW 9 mph. Partly cloudy with a 30 percent chance of rain and snow showers. Highs around 40.

Jan 20 Thursday
Wind: NNW 17 mph. Cold with sun and clouds. High 32F, Low 18F.

Jan 21 Friday
Wind: NW 18 mph. Mostly cloudy and cold. High 23F, Low 17F.

Jan 22 Saturday
Wind: N 8 mph. Mostly cloudy. High 34F, Low 18F.

Jan 23 Sunday
Wind: 14 mph. Snow, cloudy and windy in p.m. 20 percent chance of snow. High 33F, Low 23F.

Jan 24 Monday
Very windy and cold with snow. High 35F, Low 22F.

Jan 25 Tuesday
Clouds and Sun. High 41F, Low 31F

TO: ALL PERSONNEL

- **All safety rules are to be followed.**
- **Look out for your fellow responders.**
- **Use Common Sense.**
- **Do Not Take Chances.**
- **If unsafe, STOP and talk to your supervisor.**
- **ZERO Injuries is our goal.**

Site Description: On-Water & Shoreline Cleanup Activities

Potential Hazards: Slippery and uneven surfaces; exposure to weathered oil; cold/heat exposure; slips, trips, and falls; slippery surfaces while conducting boat operations

General Safety Concerns:

ADHERENCE TO ALL PPE REQUIREMENTS

Level D (no known hazard(s))

- **Tyvek-type and /or rain gear.**
- **Hard hat when overhead hazards exist**
- **Safety glasses/goggles/face shield**
- **Work shoes**
- **Disposable boots**
- **Chemical resistant gloves**
- **Hearing protection**

NOTE: Eye Protection is NOT OPTIONAL. ANSI Approved Safety Eye Wear with Side Shields is the minimum eye protection requirement for all activities.

Personal Flotation Equipment (PFDs) are required to be worn properly—fully secured—when working on or near the waters edge. UNSECURED PFDs MEANS NO PFDs!

Gloves and sleeve area and boot and pant leg area should be taped to prevent contact with product.

Use of tobacco products of any kind and eating/drinking is restricted to designated areas only and only following proper personal decontamination.

Contractors should clearly designate break/rest areas. Otherwise such activity is prohibited.

Special notes:

- **In the event clean up activities involve entry to industrial/commercial facilities, safety rules of the facility will apply as long as the safety rules do not contradict this Plan.**
- **ALL INJURIES REGARDLESS OF SEVERITY MUST BE REPORTED TO THE OPERATIONS CENTER AND SAFETY IMMEDIATELY AND A INCIDENT REPORT MUST BE FORWARDED VIA THE FIELD SAFETY REPRESENTATIVE**
- **ALL PERSONNEL VISITING THE HOT ZONE MUST BE WEARING THE APPROPRIATE PPE.**
- **Handling of distressed or dead animals is restricted to agency personnel. If found, report to the area supervisor who will notify the appropriate person.**

Cold Weather Alert

Starting Saturday, January 15th and lasting through Monday, January 24th, the weather forecast is calling for temperatures mostly in the 30's, ranging from a high of 37° to a low of 23° during the period.

In addition, wind speed is predicted to increase throughout the period.

Wednesday, January 11th and Sunday, January 23rd are presently calling for 20-30 percent chance of precipitation in the form of snow.

Adjust accordingly. Dress appropriately and use caution if snow arrives in the area. Drive and walk cautiously.

Major Factors that Can Lead to Cold Weather Injuries:

- Wearing inadequate or wet clothing increases the effects of cold on the body.
- Taking certain drugs or medications such as alcohol, nicotine, caffeine, and medication that inhibit the body's response to the cold or impairs judgment.
- Having a cold or certain diseases, such as diabetes, heart, vascular, and thyroid problems, may make a person more susceptible to the winter elements.
- Becoming exhausted or immobilized, especially due to injury or entrapment (may speed up the effects of cold weather.
- Men have far greater death rates from cold exposure than women, perhaps due to inherent risk-taking activities, body-fat composition or other physiological differences.

Conference Call Procedure
MV Athos I

From time to time, the Unified Command will have a need to convene via conference call. Their needs could range from situational updates to critical information requiring Unified Command decisions.

The Unified Command will initiate conference calls by contacting the Planning Section Chief. The Planning Section Chief will require a list of persons that should be invited to participate in the Conference Call, the preferred time of the call, ask whether or not a scribe is required and a suggested agenda.

The Planning Section Chief will call ConferencePlus and schedule the call. The Planning Section Chief will then send an email to all invited conference call participants, which gives the call-in particulars and the agenda.

The Situation Unit and Operations and Planning must have a representative on the call to present information according to agenda.

WEEKLY UNIFIED COMMAND CONFERENCE CALL IN NUMBER:
Dial-In Number: 1 (888) 287-5343 (to join the audio conference call)
Alternate Dial-In: 1 (847) 619-6483
Pass code: 9285423# - If you call in before the moderator, you will be placed on hold with music background until the moderator

MODERATOR CALL IN ADDITIONAL NUMBER: 5233443

Agenda - Unified Command Meetings
Thursdays -- 0900hrs

1.	Introductions – UC reps self-introductions	All participants
2.	Situation Brief	Situation Unit Leader
3.	Planned Actions	Planning/Ops Chief
4.	Critical Issues/Needs	Operations Chief
5.	Review of Open Action Items	Situation Unit Leader
6.	Long Range Plan	Steve Kegelman
7.	New Jersey comments	NJ UC Rep
8.	Pennsylvania comments	PA UC Rep
9.	Delaware comments	DE UC Rep
10.	FOSC comments	FOSC
11.	Announce any necessary additional UC Meetings (other than Mondays)	RP
12.	Final remarks	RP
13.	***This concludes the Command and General Staff Meeting. Unified Command Members only from this point on.***

AND SNOW. LOWS IN THE LOWER 30S.

TUESDAY

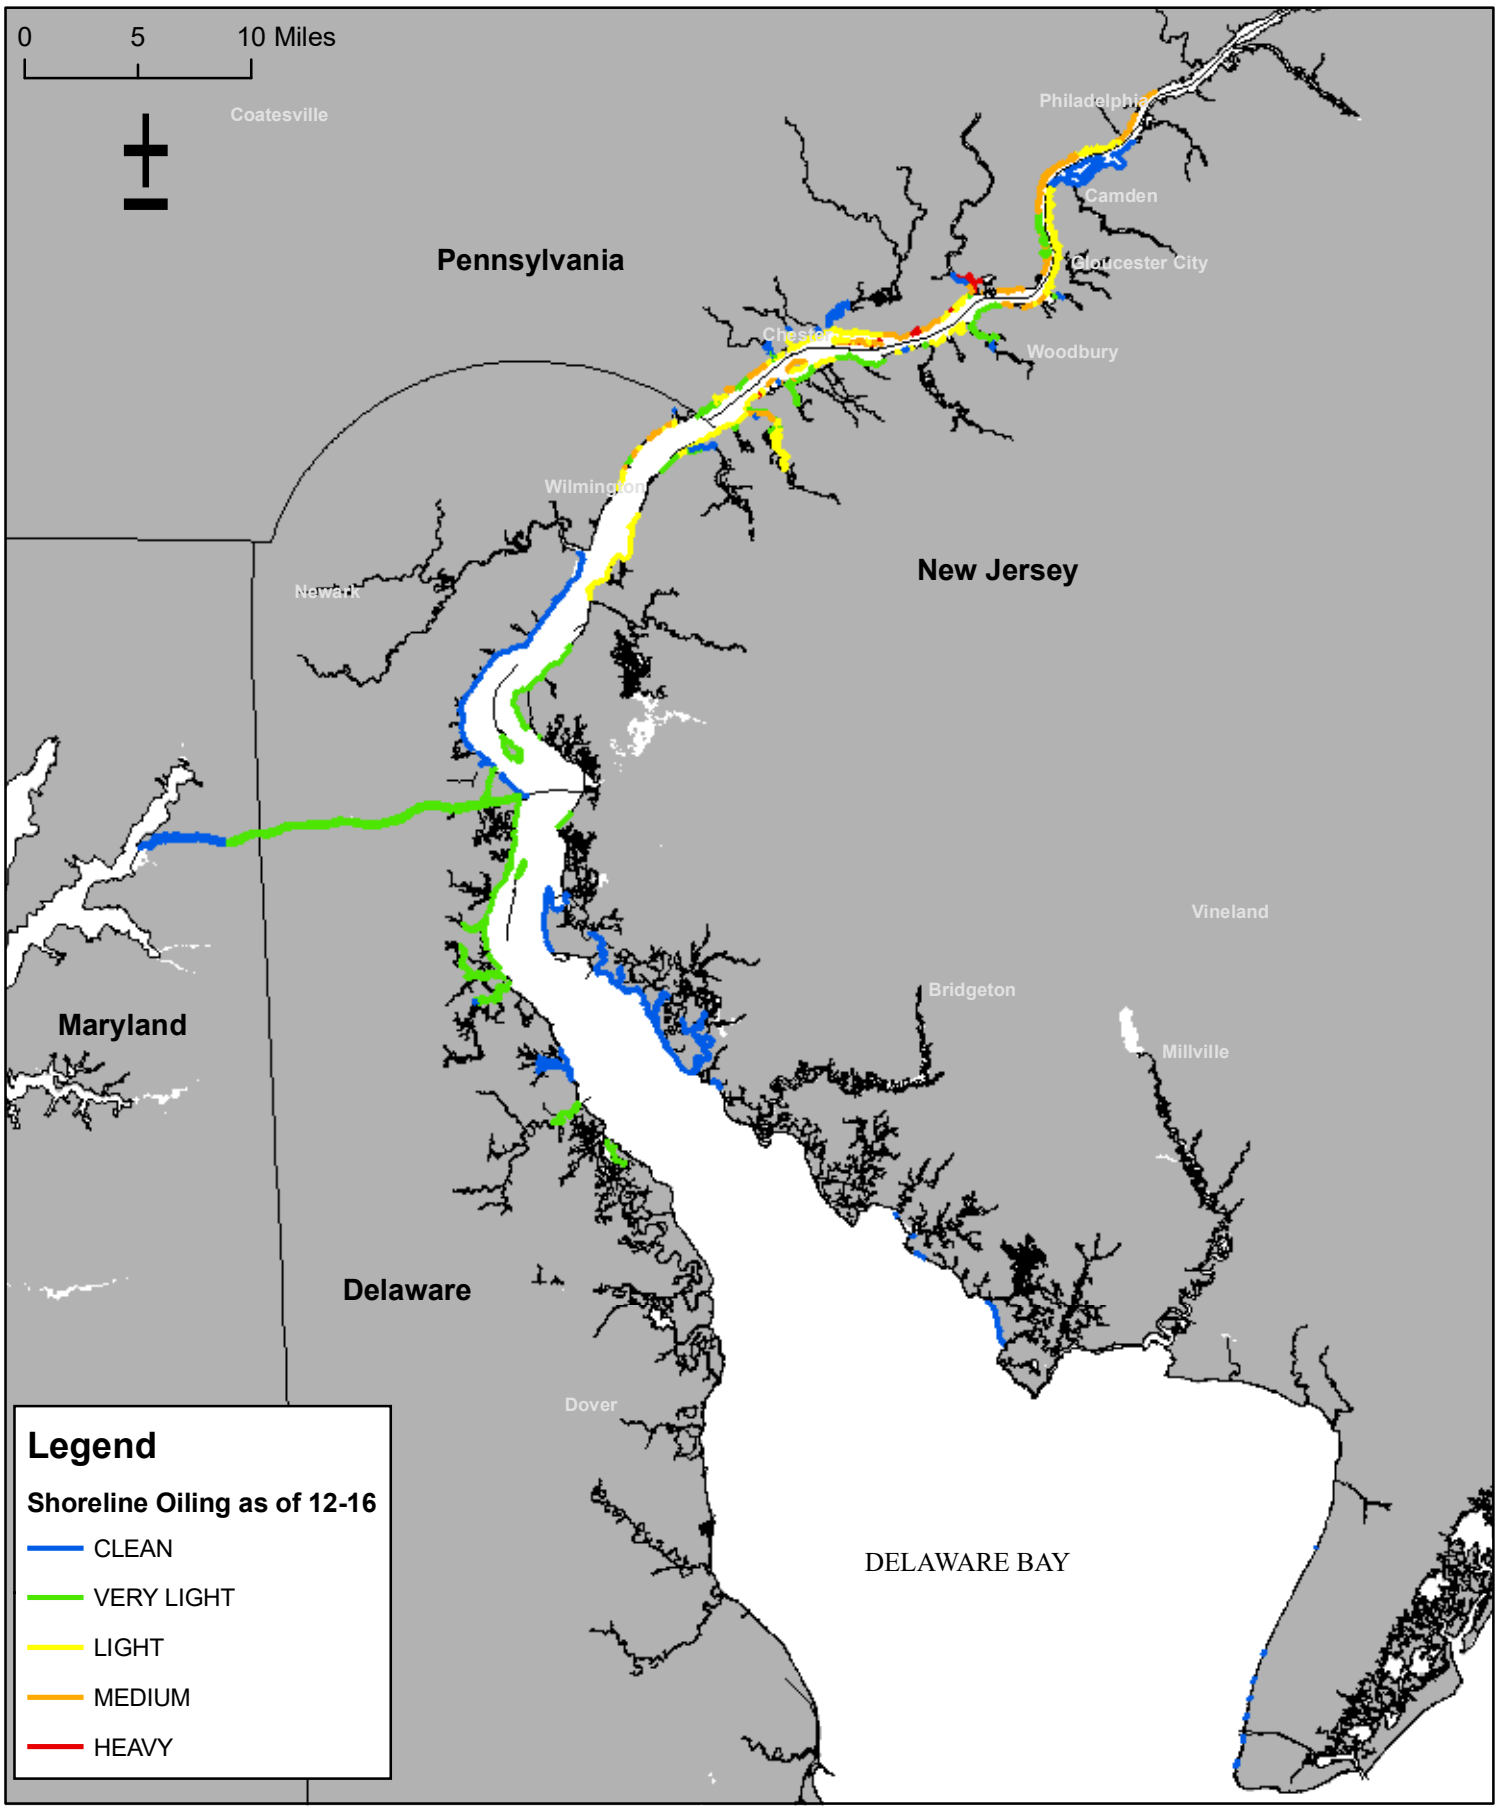
MOSTLY CLOUDY IN THE MORNING...THEN BECOMING PARTLY
CLOUDY. A 30 PERCENT CHANCE OF RAIN AND SNOW. HIGHS AROUND 40.

M/V Athos I, Delaware River, NJ/PA

Shoreline Oiling as of 12/16/2004

Graphic does not represent precise amounts or locations of oil.

USE ONLY AS A GENERAL REFERENCE



Objective:

Removal of gross oil before the focus is shifted to final cleanup activities

Gross (i.e., bulk) oil removal is proposed as a means to maximize the environmental benefit and effectiveness of shoreline cleanup operations. Shoreline segments have been prioritized (attached) based on the amount of oil, and the presence of sensitive resources or high public access.

As cleanup activities complete gross oil removal, response resources will be redeployed by the Operations Section according to the listed priorities. The decision to move the resources within a division will be the responsibility of the Division Supervisors. The Environmental Unit and SCAT Teams will be available to provide suggestions and/or guidance.

Operations Priorities for Cleanup

Conduct cleanup with minimal damage to environmental resources. i.e. Do not drive spilled oils into sediments by foot / mechanical traffic

A SCAT Special Issue Team (SIT) will evaluate historic, special environmental, or high-public access areas to provide more detailed and additional cleanup requirements.

Shoreline Type	Cleanup Endpoint	Allowable Cleanup Methods
Sand Flats (hard surface e.g. Tinicum I. NJ side)	General: No recoverable surface oil, buried oil layers or tarballs larger than dimes; no more than stain on sand	Manual removal with shovels/rakes and squeegees; small equipment (bobcat) to remove oil and oiled surface and subsurface sand; minimize removal of clean sand on and under oiled layers; Minimize equipment (bobcat) travel over oiled surfaces.
	Special: TBD by SIT (Special Issue Team)	
Sand Beaches; Mixed Sand and Fine Gravel Beaches	General: No recoverable surface oil, buried asphalt pavements or tarballs larger than dimes; no more than stain on gravel	Manual removal with shovels/rakes; minimize removal of clean sediments on/under oiled layers; small equipment (bobcat)to remove oil and oiled surface/subsurface sand and gravel. Minimize small equipment (bobcat)travel over oiled surfaces. Mechanical relocation of fine gravels into piles for flushing, including use of high-pressure/hot-water washing (hotsie), with containment/recovery of released oil; return gravel to original location and contour. Use of heavy equipment will require additional approval.
	Special: TBD by SIT	
Course Gravel Beaches/Fill (e.g. cobbles, and larger)	No more recoverable or potentially mobile oil on surface, doesn't rub off on contact Visible heavy product that could be mobilized should be removed.	Manual removal of surface oil using low pressure flushing and high-pressure/hot-water washing (hotsie), with containment/recovery of released oil; return gravel to original location and contour. Use of heavy equipment will require additional approval by the SIT.
	Special: TBD by SIT	
Riprap/Stone Seawalls **Solid Seawall, Bulkheads and Docks**	General: No more recoverable or potentially mobile oil on surface, doesn't rub off on contact Visible heavy product that could be mobilized should be removed.	Flushing and high-pressure/hot-water washing (hotsie), as needed. Containment/recovery of released oil.
	Special: No more recoverable or potential mobile oil on surface; Stop cleanup efforts when all oil is removed other than a stain. Additional cleaning or replacement of riprap to be considered by SIT.	In high-public access or special environmental / historic areas (e.g., Ft. Mifflin, eagle nesting, others to be determined): may request use of SWAs (surface washing agents) or special cleanup efforts for use as need to meet endpoint.

Mud Flats (e.g. soft surface, steps will push oil in sediments)	General: No potentially mobile oil.	To be determined on a site-specific basis by SIT.
Marshes	General: Oil on vegetation no longer wipes off on contact. No remaining recoverable or potentially mobile oil in accessible areas. (Accessible areas will be identified by SIT.)	To be determined on a site-specific basis by SIT. Options (cutting, In-situ-Burn, flushing, manual pickup of pooled oil, monitoring) to be determined on site-specific basis.
	Special: Other removal options will be considered by Environmental Unit.	

Debris Recovery Guidelines[1]

- Report dead and live wildlife to triage center at 215-365-1558. Collect and bag all dead wildlife.
- Manual removal of oiled debris that can be easily picked up and bagged.
- For small unoiled debris that can be easily picked up, move to the supra tidal zone if it has the potential to become oiled in its current location.
- Leave unoiled debris in place if it does not have the potential to become oiled.
- Cut and remove oiled logs < 6 inches in diameter (cut in into lengths < 6 feet).
- Manual removal of oiled debris (other than logs) < 6 inches in diameter and < 6 feet in length.
- Clean large (> 6 inches in diameter and/or 6 feet in length) oiled debris in place. Recover oil using appropriate sorbents. Approved cleaning methods for large oiled debris are presented below:

Method	Handling	RRT Approval	Special Permits
Scraping	No	No	No
Wiping	No	No	No
Hotsie	No	No	No

The following options require special approval

Method	Handling	RRT Approval	Special Permits
SWAs	No	Yes	No
Burning	Yes	Yes	Yes

For questions regarding environmental issues, contact Lyle Trumbull at (610) 710-1919.

[1] Non-living oiled debris

Memorandum

To: **Operations Section Chief**

From: **Group Supervisor, Wildlife Recovery**

Subject: **Protocol for handling dead wildlife carcasses found during shoreline cleanup.**

As workcrews are cleaning oiled-shorelines and structures or removing oiled-debris they are likely to encounter dead oiled wildlife. Please handle wildlife carcasses as follows.

A. Dead Oiled Wildlife

All dead oiled wildlife (birds, fish, mammals, turtles) shall be bagged and held for the Wildlife Recovery Unit, and not disposed with other oiled material.

1. **Carefully approach the carcass and confirm that it is dead. If the animal is not dead do not attempt to capture it – contact the Wildlife Recovery Unit immediately for instructions.**

2. **If the animal is confirmed to be dead, place the carcass into a plastic bag – DO NOT mix carcasses together in the same bag – ONE carcass per bag.**

3. **Tie the bag closed and give it to the crew leader.**

4. **The crew leader shall immediately notify the Wildlife Recovery Triage Center at 215-365-1558 to have the carcasses picked up – do not leave bagged oiled carcasses unattended in the field.**

B. Live Oiled Wildlife

Clean up crews shall not attempt to capture live wildlife.

1. **Live oiled wildlife seen during clean up efforts should be reported by the crew leader to the Wildlife Recovery Triage Center at 215-365-1558 and relay the location, time, number and types of oiled wildlife seen.**

If you have any questions, please contact me at 609-214-7895.

ICS 202 - General Response Objectives

Incident:	MV Athos I	**Prepared By:**	Planning Section **at** 1/22/2005 12:38
Period:	Period 26 (1/27/2005 06:00 - 2/8/2005 06:00)	**Version Name:**	Unified Command Objectives

Overall and Tactical Objectives

	Assigned To	Status
Conduct operations in accordance with the site safety plan.		
Continue to clean waterfront facilities per facility priority list.		
Decon of vessels as needed, including recreational vessels.		
Continue to enforce safety zone.		
Continue aggressive gross shoreline cleanup and disposal operation.		
Continue to assess the location and extent of oil impact.		
Monitor areas of special interest for possible submerged oil threat (water column monitoring, water intake consortium)		
Collect, recover, and rehabilitate injured wildlife.		
Continue to keep stake holders and public informed.		
Unified Command Emphasis:		
• Make Safety a Top Priority. Adhere to SSP and watch out for your fellow responders.

ICS 204 - Assignment List

Incident:	MV Athos I	**Branch:**	Shoreline Cleanup Assessment Team
Period:	Period 26 (1/27/2005 06:00 - 2/8/2005 06:00)	**Division/Group:**	
Prepared By Signature:		**Task Force:**	
Approved By Signature:			

Operations Personnel

Title	Person	Radio	Phone	Pager
Planning Section Chief	D. Sobieski		714-342-6358	
Environmental Unit	L. Trumbull		610-710-1919	
Safety Officer	E. Doyle/A. Gresham		302-293-8959/8960	

Assignments

SCAT on an as-needed basis. Coordinate with Lyle Trumbull.

Special Equipment / Supplies Needed for Assignment

All unused equipment should be immediately returned to Staging for redeployment.

Special Site-Specific Safety Considerations

Review Site Safety Plan(Contractors) With Special Attention To PPE, Slips, and Trips & Falls. All Personnel Are Required To Follow Decon Procedures In Site Safety Plan.

Special safety precautions for cold weather hazards require multi-layered clothing including head and ear covers, gloves, and heavy socks, as well as care when driving or walking on icy surfaces. Be aware of your fellow workers who may become lethargic or non-responsive when exposed to below freezing temperatures as this may indicate the onset of hypothermia. Seek cover and warmth when extremities become numb as this may indicate the onset of frostbite.

Additional Information

Report situation status and resource status each day at 1000 and 1430 hrs. 267-765-3446/3448/3447. This is critical to allow us to plan properly and ensure you will have the resources you need to do your job tomorrow.

Fax all equipment and personnel Check-In sheets to 215-923-4476 with an attention line to "Resource Unit"

Please review attached protocol for handling dead wildlife carcasses.

Wake incidents should be reported to the Waterways Management Branch at 215-271-4889 (7:30am to 4:00pm) or 215-271-4807 (After 4:00pm). Must work outside Safety Zone established by Waterways Management.

Continue preparation for severe weather operation.

Decon Group Assignments

- There are no current assignments due to ice conditions on the river.

- Currently all portable barge sets are being demobilized with the exception of three.

- These three portable barge sets will be staged at the Lagoon until weather permits them to be deployed.

Future Plans

27 January to 08 February 2005

Naval Business Center

Navy Base

Support PA 8, NJ 3

ICS 204 - Assignment List

Incident:	MV Athos I	**Branch:**	Operations Section
Period:	Period 26 (1/27/2005 06:00 - 2/8/2005 06:00)	**Division/Group:**	Decon Group
Prepared By Signature:		**Task Force:**	Recreational Boat Task Force
Approved By Signature:			

Operations Personnel

Title	Person	Radio	Phone	Pager
Operations Section Chief	B. Gereighty		985-960-3829	
Vessel Decon Group Leader	J. Sanial		856-266-3810	
Rec. Boat Decon Task Force Supervisor	R. Johnson		504-458-2690	
Safety Officer	E. Doyle/A. Gresham		302-293-8959/8960	

Resources Required

Area of Operation	Resource Type	Description	Quantity	Size
Recreational Boat Task Force	Manpower: Responder	Responders	15 each	
Recreational Boat Task Force	Manpower: Supervisor	Supervisor	1 each	

Assignments

Recreational vessel cleaning program at Lagoon and local marina.

Special Equipment / Supplies Needed for Assignment

All unused equipment should be immediately returned to Staging for redeployment.

Special Site-Specific Safety Considerations

- Safety: Ensure proper PPE such as face shields are used during pressure washing operations.

Review Site Safety Plan(Contractors) With Special Attention To PPE, Slips, and Trips & Falls. All Personnel Are Required To Follow Decon Procedures In Site Safety Plan.

Special safety precautions for cold weather hazards require multi-layered clothing including head and ear covers, gloves, and heavy socks, as well as care when driving or walking on icy surfaces. Be aware of your fellow workers who may become lethargic or non-responsive when exposed to below freezing temperatures as this may indicate the onset of hypothermia. Seek cover and warmth when extremities become numb as this may indicate the onset of frostbite.

Additional Information

Report situation status and resource status each day at 1000 and 1430 hrs. 267-765-3446/3448/3447. This is critical to allow us to plan properly and ensure you will have the resources you need to do your job tomorrow.

Please review attached protocol for handling dead wildlife carcasses.

Wake incidents should be reported to the Waterways Management Branch at 215-271-4889 (7:30am to 4:00pm) or 215-271-4807 (After 4:00pm).

Continue preparation for severe weather operation.

ICS 204 - Assignment List

Incident: MV Athos I	**Branch:** Wildlife Recovery Group
Period: Period 26 (1/27/2005 06:00 - 2/8/2005 06:00)	**Division/Group:**
Prepared By Signature:	**Task Force:**
Approved By Signature:	

Operations Personnel

Title	Person	Radio	Phone	Pager
Planning Section Chief	D. Sobieski		714-342-6358	
Environmental Unit Leader	L. Trumbull		610-710-1919	
Safety Officer	E. Doyle/A. Gresham		302-293-8959/8960	

Assignments

Continue to recover & rehabilitate any impacted wildlife. Provide technical assistance on any wildlife-related issues.

Special Instructions for Division / Group

Wildlife recovery teams will advise Situation Unit and group supervisor of any observed shoreline oil impact.

Special Equipment / Supplies Needed for Assignment

All unused equipment should be immediately returned to Staging for redeployment.

Special Environmental Considerations

Report endangered species observations to the Group Supervisor.

Special Site-Specific Safety Considerations

Review Site Safety Plan (Contractors) With Special Attention To PPE, Slips, and Trips & Falls. All Personnel Are Required To Follow Decon Procedures In Site Safety Plan.

Special safety precautions for cold weather hazards require multi-layered clothing including head and ear covers, gloves, and heavy socks, as well as care when driving or walking on icy surfaces. Be aware of your fellow workers who may become lethargic or non-responsive when exposed to below freezing temperatures as this may indicate the onset of hypothermia. Seek cover and warmth when extremities become numb as this may indicate the onset of frostbite.

Additional Information

Wake incidents should be reported to the Waterways Management Branch at 215-271-4889 (7:30am to 4:00pm) or 215-271-4807 (After 4:00pm). Must work outside Safety Zone established by Waterways Management.

Continue preparation for severe weather operation.

Incident:	MV Athos I	**Branch:**	Deputy Operations Branch
Period:	Period 26 (1/27/2005 06:00 - 2/8/2005 06:00)	**Division/Group:**	Monitoring Group
Prepared By Signature:		**Task Force:**	
Approved By Signature:			

Operations Personnel

Title	Person	Radio	Phone	Pager
Operations Section Chief	B. Gereighty		985-960-3829	
Operations Section Chief for Port Ops	B. Jones		215-778-4533	
Division/Group Supervisor	J. Kapsimalis		609-351-7145	
Safety Officer	E. Doyle/A. Gresham		302-293-8959/8960	

Resources Required

Area of Operation	Resource Type	Description	Quantity	Size
Monitoring Group	Federal Monitor	NSF / MSO Monitors	8 each	
Monitoring Group	Manpower: Supervisor	USCG Supervisor	1 each	
Monitoring Group	State Monitor	State Monitors	3 each	

Incident Resources - Equipment

Supplier	Resource Type	Description	Quantity	Size	Status
Monitoring Group					
USCG	Vehicle	Vehicle - G/V	1 each		Assigned
USCG	Vehicle	Vehicle - Rental	5 each		Assigned
New Jersey	Vehicle	Vehicle - State Vehic	3 each		Assigned
Pennsylvania	Vehicle	Vehicle - State Vehic	4 each		Assigned

Incident Resources - Manpower

Supplier	Resource Type	Description	Quantity	Size	Status
Monitoring Group					
USCG	Manpower: Supervisor	MSO Personnel	4 each		Assigned
USCG	Manpower: Supervisor	NSF Team Member	6 each		Assigned
New Jersey	Manpower: Supervisor	State DEP - New Jer	3 each		Assigned
Pennsylvania	Manpower: Supervisor	State DEP - Pennsyl	4 each		Assigned
USCG	Manpower: Supervisor	Supervisors	1 each		Assigned

Assignments

Conduct clean-up monitoring at assigned divisions. Ensure safe and effective recovery operations. Document resource use and availability, ensure adequacy of clean-up efforts and identify and correct safety issues. Evaluate response methods needed for oil removal and make recommendations to Supervisor. Report findings to Ops Representative (609-351-8525). Correct gross safety violations immediately. Report violations to Safety Officer (see numbers above).

Special Environmental Considerations

Ensure no wetland vegetation is cut without state approval. Do not walk through or work in Mud Flats. Report oiled wildlife to situation unit (267-765-3446/3448/3447).

Operations Section Deputy Recovery	J. Tanner		251-454-6397	
Safety Officer	E. Doyle/A. Gresham		302-293-8959/8960	

Assignments

Provide maintenance.

Location of Work

See Division Overview Map.

Special Equipment / Supplies Needed for Assignment

All unused equipment should be immediately returned to Staging for redeployment.

Special Environmental Considerations

Cut no wetland vegetation without state approval. Do not walk through or work in Mud Flats. Report oiled wildlife to situation unit.

Special Site-Specific Safety Considerations

Review Site Safety Plan (Contractors) With Special Attention To PPE, Slips, and Trips & Falls. All Personnel Are Required To Follow Decon Procedures In Site Safety Plan.

Special safety precautions for cold weather hazards require multi-layered clothing including head and ear covers, gloves, and heavy socks, as well as care when driving or walking on icy surfaces. Be aware of your fellow workers who may become lethargic or non-responsive when exposed to below freezing temperatures as this may indicate the onset of hypothermia. Seek cover and warmth when extremities become numb as this may indicate the onset of frostbite.

Additional Information

Report situation status and resource status each day at 1000 and 1430 hrs. 267-765-3446/3448/3447. This is critical to allow us to plan properly and ensure you will have the resources you need to do your job tomorrow.

Fax all equipment and personnel Check-In sheets to 215-923-4476 with an attention line to "Resource Unit"

Please review attached protocol for handling dead wildlife carcasses.

Wake incidents should be reported to the Waterways Management Branch at 215-271-4889 (7:30am to 4:00pm) or 215-271-4807 (After 4:00pm). Must work outside Safety Zone established by Waterways Management.

Continue preparation for severe weather operation.

PMC	Manpower: Supervisor	Supervisors - PA-8	1 each		Assigned

Assignments

Shoreline cleanup.

Location of Work

See Division Overview Map.

Special Equipment / Supplies Needed for Assignment

All unused equipment should be immediately returned to Staging for redeployment.

Special Environmental Considerations

Cut no wetland vegetation without state approval. Do not walk through or work in Mud Flats. Report oiled wildlife to situation unit.

ICS 204 - Assignment List

Incident:	MV Athos I	**Branch:**	Pennsylvania / Delaware Branch
Period:	Period 26 (1/27/2005 06:00 - 2/8/2005 06:00)	**Division/Group:**	PA-8 Division
Prepared By Signature:		**Task Force:**	
Approved By Signature:			

Special Site-Specific Safety Considerations

Review Site Safety Plan (Contractors) With Special Attention To PPE, Slips, and Trips & Falls. All Personnel Are Required To Follow Decon Procedures In Site Safety Plan.

Special safety precautions for cold weather hazards require multi-layered clothing including head and ear covers, gloves, and heavy socks, as well as care when driving or walking on icy surfaces. Be aware of your fellow workers who may become lethargic or non-responsive when exposed to below freezing temperatures as this may indicate the onset of hypothermia. Seek cover and warmth when extremities become numb as this may indicate the onset of frostbite.

Additional Information

Report situation status and resource status each day at 1000 and 1430 hrs. 267-765-3446/3448/3447. This is critical to allow us to plan properly and ensure you will have the resources you need to do your job tomorrow.

Fax all equipment and personnel Check-In sheets to 215-923-4476 with an attention line to "Resource Unit"

Please review attached protocol for handling dead wildlife carcasses.

Wake incidents should be reported to the Waterways Management Branch at 215-271-4889 (7:30am to 4:00pm) or 215-271-4807 (After 4:00pm). Must work outside Safety Zone established by Waterways Management.

Continue preparation for severe weather operation.

TO: ALL PERSONNEL

- **All safety rules are to be followed.**
- **Look out for your fellow responders.**
- **Use Common Sense.**
- **Do Not Take Chances.**
- **If unsafe, STOP and talk to your supervisor.**
- **ZERO Injuries is our goal.**

Site Description: On-Water & Shoreline Cleanup Activities

Potential Hazards: Slippery and uneven surfaces; exposure to weathered oil; cold/heat exposure; slips, trips, and falls; slippery surfaces while conducting boat operations

General Safety Concerns

ADHERENCE TO ALL PPE REQUIREMENTS

Level D (no known hazard(s))

- **Tyvek-type and /or rain gear.**
- **Hard hat when overhead hazards exist**
- **Safety glasses/goggles/face shield**
- **Work shoes**
- **Disposable boots**
- **Chemical resistant gloves**
- **Hearing protection**

NOTE: Eye Protection is NOT OPTIONAL. ANSI Approved Safety Eye Wear with Side Shields is the minimum eye protection requirement for all activities.

Personal Flotation Equipment (PFDs) are required to be worn properly—fully secured—when working on or near the waters edge. UNSECURED PFDs MEANS NO PFDs!

Gloves and sleeve area and boot and pant leg area should be taped to prevent contact with product.

Use of tobacco products of any kind and eating/drinking is restricted to designated areas only and only following proper personal decontamination.

Contractors should clearly designate break/rest areas. Otherwise such activity is prohibited.

Special notes:

- **In the event clean up activities involve entry to industrial/commercial facilities, safety rules of the facility will apply as long as the safety rules do not contradict this Plan.**
- **ALL INJURIES REGARDLESS OF SEVERITY MUST BE REPORTED TO THE OPERATIONS CENTER AND SAFETY IMMEDIATELY AND A INCIDENT REPORT MUST BE FORWARDED VIA THE FIELD SAFETY REPRESENTATIVE**
- **ALL PERSONNEL VISITING THE HOT ZONE MUST BE WEARING THE APPROPRIATE PPE.**
- **Handling of distressed or dead animals is restricted to agency personnel. If found, report to the area supervisor who will notify the appropriate person.**

Wintertime Slips, Trips, and Falls

Slip, trip, and fall injuries are the most common type of injury that occur during the winter months because of wet, icy, and snowy conditions.

Walking-related injuries often occur when people are rushing or taking shortcuts.

During cold weather conditions, special attention should be paid to the following:

- Make sure you wear proper footwear.
- Make sure that walking surfaces are cleared of ice and snow. If a walkway is simply too slippery to walk on or work safely, it should be shut down until the area can be cleared or conditions improve.
- Ensure that walkways are cleared of obstacles and debris which can pose additional hazards under ice and snow.
- Recognize that snowy conditions, combined with heavy winter apparel, can limit your ability to see and hear.
- Take extra precautions to be aware of the work environment and to avoid slip, trip, and fall hazards.
- Here are some tips for walking in snowy and icy conditions:
  1. Use small steps
  2. Use handrails, when available
  3. Use smooth motions
  4. Always stay aware and alert. If possible, avoid doing other tasks while walking.
  5. When the nature of the work requires you to inspect equipment or do other activities while walking, frequently scan your path for obstructions or hazards.
  6. Always look forward and establish sure footing with each step. Never walk backwards, and when moving through an area, choose a path that is level and stable.

Towing Your Boat and Trailer Safely

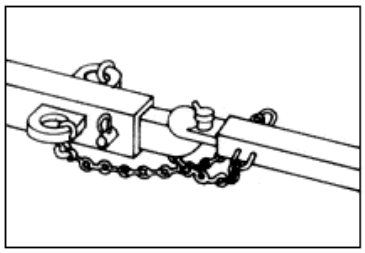
Performing a safety inspection before each trip is important to the safe operation of your trailer and ensuring that the trailer is secured properly before towing onto public roadways.

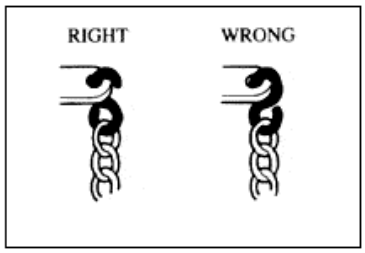
Make sure that:

- the pin securing the ball mount to the receiver is intact.
- the hitch coupler is secured.
- spring bar hinges are tight with the safety clips in place (for load equalizer or weight distributing hitches).
- safety chains are properly attached.
- the electrical plug is properly installed.

Check Before You Go Out On The Highway…

- The tow ball and coupler are the same size and bolts with washers are tightly secured. (The vibration of road travel can loosen them.)
- The coupler is completely over the ball and the latching mechanism is locked.
- The trailer is loaded evenly from front to rear as well as side to side.
- The safety chains are attached crisscrossing under the coupler to the frame of the tow vehicle. If the ball were to break, the trailer would follow in a straight line and prevent the coupler from dragging on the road.

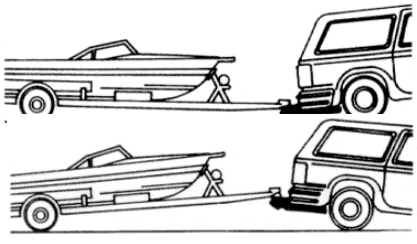




- The lights on the trailer function properly.

A tow vehicle and a trailer presents a weight consideration concern. For safe towing, the tow vehicle must be a proper match for the trailer. Keep these reminders in mind:

- Too much weight on the hitch will cause the rear wheels of the tow vehicle to drag and may make steering more difficult.
- Too much weight on the rear of the trailer will cause the trailer to "fishtail" and may reduce traction or even lift the rear wheels of the tow vehicle off the ground.



Near Miss
Performing an Operational Pre-Check on all Rolling Equipment

Recently, an operator of a 4-wheeled all terrain vehicle (ATV) drove it up onto an open-sided trailer for transport. When the operator tried to activate the brakes, they failed to grab. The ATV hit another piece of equipment causing minor damage to the bumper. No one was injured.

The cause of the incident was a master cylinder failure on this 5- year old vehicle.

This near miss shows the need to perform a pre-operations check on a vehicle before placing it in service.

- Before placing an ATV in service, test the brakes with your foot or by squeezing the hand brake.
- Always test the brakes on all rolling pieces of equipment.
- When you test brakes, they should not fully depress. You should feel resistance.

If you believe the brakes or other part of the vehicle are not operating properly, tag out the equipment as out of service and inform your supervisor.

ATTENTION: All ATHOS I Response Personnel

Sunoco Security

To all response personnel who may enter one of the following SUNOCO facilities:

Fort Mifflin Terminal
Hogg Island Wharf
Paulsboro Terminal
Eagle Point Refinery or Dock Area
Philadelphia Refinery
Marcus Hook Refinery

Sunoco has a Maritime or Port Security Plan in place for each of its facilities

The plan outlines specific requirements to be taken in the event of a breach in security and what measures will be employed at each of the different Maritime Security (MARSEC) Levels.

Each facility has posted at or near the entrance the MARSEC Level presently in effect. At present, MARSEC Level One, the lowest level, is in effect.

In the event you witness any suspicious activities that may compromise the security of these facilities, you should call or contact facility security immediately. Facility security will contact the Facility Security Officer for the facility.

The Facility Security Officer (FSO) for Fort Mifflin, Hogg Island, Eagle Point docks and the Paulsboro Terminal is Tom Crawford (Logistics) and for the Eagle Point, Marcus Hook and Philadelphia Refineries (Northeast Refining) the FSO is John Ryan.

Again, any breaches, suspected breaches, or witnessed compromises of security should be reported to facility security immediately.

It is not your responsibility as a responder to get involved other than to contact Sunoco Security. Sunoco has procedures in place to deal with security issues.

12 – Day AccuWeather Forecast for Philadelphia, PA

Thursday 1/27 **Mostly sunny; very cold**
High 21° F

Friday 1/28 **Sunny, but very cold**
High 24° F

Saturday 1/29 **Partly sunny**
High 36° F

Sunday 1/30 **Mostly cloudy**
High 38° F

Monday 1/31 **Mostly cloudy**
High 42° F

Wednesday 2/2 **Some sun**
High 48° F

Thursday 2/3 **Plenty of clouds**
High 41° F

Friday 2/4 **Clouds and sun**
High 39° F

Saturday 2/5 **Partly sunny**
High 46° F

Monday 2/7 **Snow possible in the morning**
High 39° F

Tuesday 2/8 **Rather cloudy**
High 39° F

ICS 230 - Daily Meeting Schedule

Incident:	MV Athos I	**Prepared By:** Section, Planning	**at** 1/22/2005 12:38
Period:	Period 26 (1/27/2005 06:00 - 2/8/2005 06:00)	**Version Name:**	All for the Period Day 1 through 11

Conference Call Procedure
MV Athos I

From time to time, the Unified Command will have a need to convene via conference call. Their needs could range from situational updates to critical information requiring Unified Command decisions.

The Unified Command will initiate conference calls by contacting the Planning Section Chief. The Planning Section Chief will require a list of persons that should be invited to participate in the Conference Call, the preferred time of the call, ask whether or not a scribe is required and a suggested agenda.

The Planning Section Chief will call ConferencePlus and schedule the call. The Planning Section Chief will then send an email to all invited conference call participants, which gives the call-in particulars and the agenda.

The Situation Unit and Operations and Planning must have a representative on the call to present information according to agenda.

WEEKLY UNIFIED COMMAND CONFERENCE CALL IN NUMBER:
Dial-In Number: 1 (888) 287-5343 (to join the audio conference call)
Alternate Dial-In: 1 (847) 619-6483
Pass code: 9285423# - If you call in before the moderator, you will be placed on hold with music background until the moderator

MODERATOR CALL IN ADDITIONAL NUMBER: 5233443

Agenda - Unified Command Meetings
Thursdays -- 0900hrs

1.	Introductions – UC reps self-introductions	All participants
2.	Situation Brief	Situation Unit Leader
3.	Planned Actions	Planning/Ops Chief
4.	Critical Issues/Needs	Operations Chief
5.	Review of Open Action Items	Situation Unit Leader
6.	Long Range Plan	Steve Kegelman
7.	New Jersey comments	NJ UC Rep
8.	Pennsylvania comments	PA UC Rep
9.	Delaware comments	DE UC Rep
10.	FOSC comments	FOSC
11.	Announce any necessary additional UC Meetings (other than Mondays)	RP
12.	Final remarks	RP
13.	***This concludes the Command and General Staff Meeting. Unified Command Members only from this point on.***

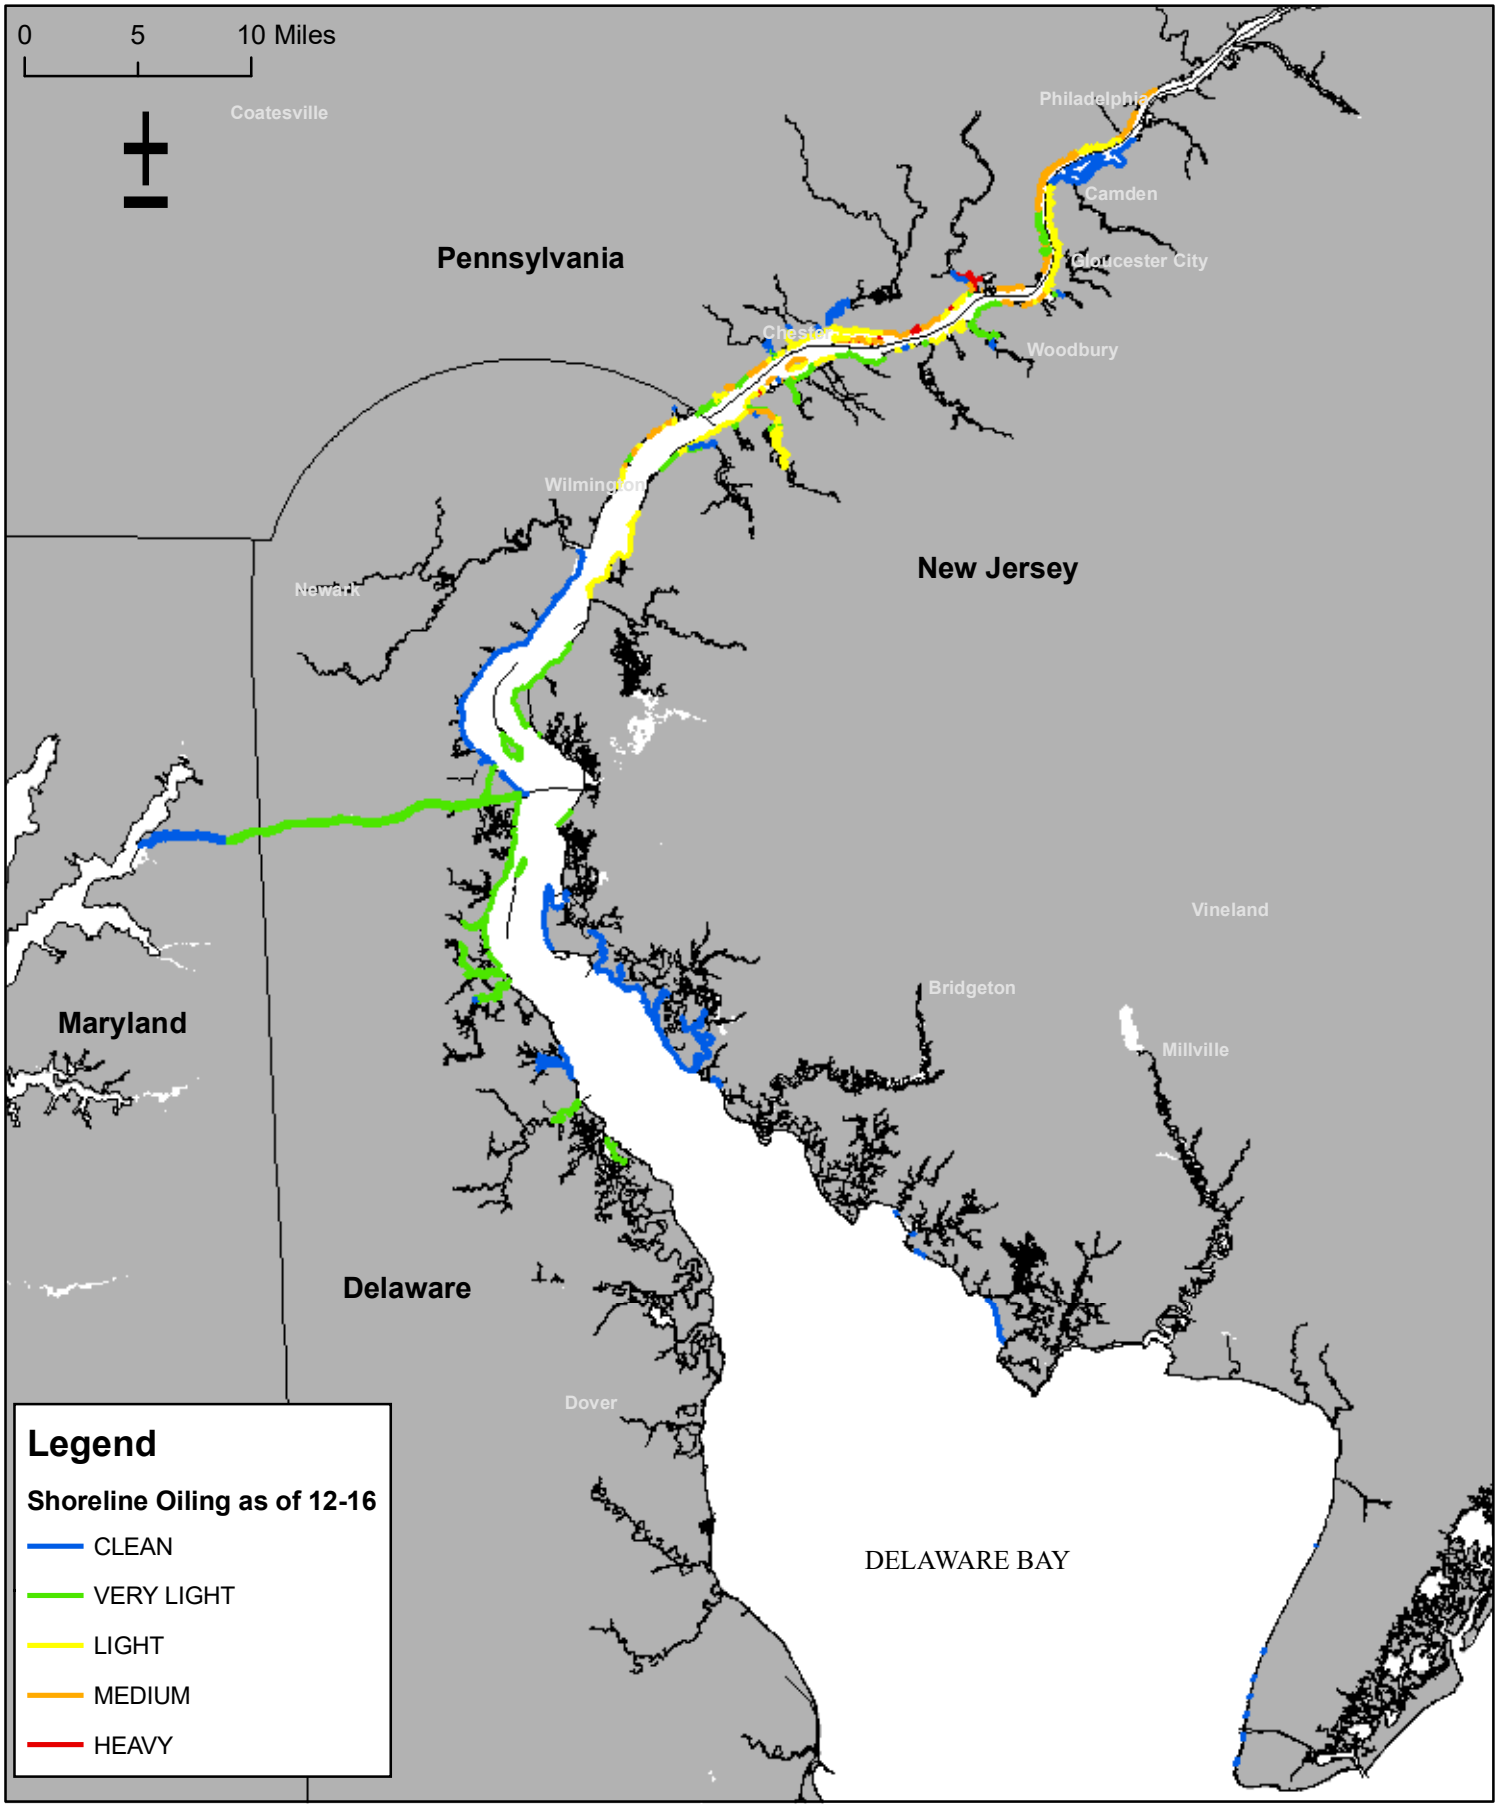
M/V Athos I, Delaware River, NJ/PA

Shoreline Oiling as of 12/16/2004

Graphic does not represent precise amounts or locations of oil.

USE ONLY AS A GENERAL REFERENCE



Objective:

Removal of gross oil before the focus is shifted to final cleanup activities

Gross (i.e., bulk) oil removal is proposed as a means to maximize the environmental benefit and effectiveness of shoreline cleanup operations. Shoreline segments have been prioritized (attached) based on the amount of oil, and the presence of sensitive resources or high public access.

As cleanup activities complete gross oil removal, response resources will be redeployed by the Operations Section according to the listed priorities. The decision to move the resources within a division will be the responsibility of the Division Supervisors. The Environmental Unit and SCAT Teams will be available to provide suggestions and/or guidance.

Operations Priorities for Cleanup

Priority 1 Heavy Oil With Special Issues	Priority 2 Heavy Oil No Special Issues	Priority 3 Moderate Oil With Special Issues	Priority 4 Moderate Oil No Special Issues	Priority 5 Light Oil With Special Issues	Priority 6 Very Light Oil With Special Issues	Priority 7 Light Oil No Special Issues	Priority 8 Very Light Oil No Special Issues

Conduct cleanup with minimal damage to environmental resources. i.e. Do not drive spilled oils into sediments by foot / mechanical traffic

A SCAT Special Issue Team (SIT) will evaluate historic, special environmental, or high-public access areas to provide more detailed and additional cleanup requirements.

Shoreline Type	Cleanup Endpoint	Allowable Cleanup Methods
Sand Flats (hard surface e.g. Tinicum I. NJ side)	General: No recoverable surface oil, buried oil layers or tarballs larger than dimes; no more than stain on sand	Manual removal with shovels/rakes and squeegees; small equipment (bobcat) to remove oil and oiled surface and subsurface sand; minimize removal of clean sand on and under oiled layers; Minimize equipment (bobcat) travel over oiled surfaces.
	Special: TBD by SIT (Special Issue Team)	
Sand Beaches; Mixed Sand and Fine Gravel Beaches	General: No recoverable surface oil, buried asphalt pavements or tarballs larger than dimes; no more than stain on gravel	Manual removal with shovels/rakes; minimize removal of clean sediments on/under oiled layers; small equipment (bobcat)to remove oil and oiled surface/subsurface sand and gravel. Minimize small equipment (bobcat)travel over oiled surfaces. Mechanical relocation of fine gravels into piles for flushing, including use of high-pressure/hot-water washing (hotsie), with containment/recovery of released oil; return gravel to original location and contour. Use of heavy equipment will require additional approval.
	Special: TBD by SIT	
Course Gravel Beaches/Fill (e.g. cobbles, and larger)	No more recoverable or potentially mobile oil on surface, doesn't rub off on contact Visible heavy product that could be mobilized should be removed.	Manual removal of surface oil using low pressure flushing and high-pressure/hot-water washing (hotsie), with containment/recovery of released oil; return gravel to original location and contour. Use of heavy equipment will require additional approval by the SIT.
	Special: TBD by SIT	
Riprap/Stone Seawalls **Solid Seawall, Bulkheads and Docks**	General: No more recoverable or potentially mobile oil on surface, doesn't rub off on contact Visible heavy product that could be mobilized should be removed.	Flushing and high-pressure/hot-water washing (hotsie), as needed. Containment/recovery of released oil.
	Special: No more recoverable or potential mobile oil on surface; Stop cleanup efforts when all oil is removed other than a stain. Additional cleaning or replacement of riprap to be considered by SIT.	In high-public access or special environmental / historic areas (e.g., Ft. Mifflin, eagle nesting, others to be determined): may request use of SWAs (surface washing agents) or special cleanup efforts for use as need to meet endpoint.

Mud Flats (e.g. soft surface, steps will push oil in sediments)	General: No potentially mobile oil.	To be determined on a site-specific basis by SIT.
Marshes	General: Oil on vegetation no longer wipes off on contact. No remaining recoverable or potentially mobile oil in accessible areas. (Accessible areas will be identified by SIT.)	To be determined on a site-specific basis by SIT. Options (cutting, In-situ-Burn, flushing, manual pickup of pooled oil, monitoring) to be determined on site-specific basis.
	Special: Other removal options will be considered by Environmental Unit.	

Debris Recovery Guidelines[1]

- Report dead and live wildlife to triage center at 215-365-1558. Collect and bag all dead wildlife.
- Manual removal of oiled debris that can be easily picked up and bagged.
- For small unoiled debris that can be easily picked up, move to the supra tidal zone if it has the potential to become oiled in its current location.
- Leave unoiled debris in place if it does not have the potential to become oiled.
- Cut and remove oiled logs < 6 inches in diameter (cut in into lengths < 6 feet).
- Manual removal of oiled debris (other than logs) < 6 inches in diameter and < 6 feet in length.
- Clean large (> 6 inches in diameter and/or 6 feet in length) oiled debris in place. Recover oil using appropriate sorbents. Approved cleaning methods for large oiled debris are presented below:

Method	Handling	RRT Approval	Special Permits
Scraping	No	No	No
Wiping	No	No	No
Hotsie	No	No	No

The following options require special approval

Method	Handling	RRT Approval	Special Permits
SWAs	No	Yes	No
Burning	Yes	Yes	Yes

For questions regarding environmental issues, contact Lyle Trumbull at (610) 710-1919.

[1] Non-living oiled debris

Memorandum

To: **Operations Section Chief**

From: **EU**

Subject: **Protocol for handling dead wildlife carcasses found during shoreline cleanup.**

As workcrews are cleaning oiled-shorelines and structures or removing oiled-debris they are likely to encounter dead oiled wildlife. Please handle wildlife carcasses as follows.

A. Dead Oiled Wildlife

All dead oiled wildlife (birds, fish, mammals, turtles) shall be bagged and held for the Wildlife Recovery Unit, and not disposed with other oiled material.

1. **Carefully approach the carcass and confirm that it is dead. If the animal is not dead do not attempt to capture it – contact the EU Leader at (610) 710-1919 immediately for instructions.**

2. **If the animal is confirmed to be dead, place the carcass into a plastic bag – DO NOT mix carcasses together in the same bag – ONE carcass per bag.**

3. **Tie the bag closed and give it to the crew leader.**

4. **The crew leader shall immediately notify the EU Leader at (610) 710-1919 to have the carcasses picked up – do not leave bagged oiled carcasses unattended in the field.**

B. Live Oiled Wildlife

Clean up crews shall not attempt to capture live wildlife.

1. **Live oiled wildlife seen during clean up efforts should be reported by the crew leader to the EU Leader Lyle Trumbull and relay the location, time, number and types of oiled wildlife seen. If Lyle Trumbull is unavailable call Tri-state Bird Rescue at 302-737-9543.**

If you have any questions, please contact me at (610) 710-1919.

ICS 202 - General Response Objectives

Incident: MT Athos I	Prepared By: Planning Section at 4/3/2005 09:26
Period: Period 31 (4/5/2005 06:00 - 4/19/2005 06:00)	Version Name: Unified Command Objectives

Overall and Tactical Objectives

	Assigned To	Status
Conduct operations in accordance with the site safety plan.		
Continue to clean waterfront facilities per facility priority list.		
Decon recreational vessels		
Continue aggressive shoreline cleanup and disposal operation.		
Continue to assess the location and extent of oil impact.		
Monitor areas of special interest for possible submerged oil threat (water intake consortium)		
Collect, recover, and rehabilitate injured wildlife.		
Continue to keep stake holders and public informed.		
Begin process of identifying areas where there is no further action required. These areas will be areas where the clean up is complete. Some areas will be identified for final "Sign Off"		
Unified Command Emphasis:		
• Safety First		

© 1997-2005 dbSoft, Inc.

Assignments

*** General cleanup notes:
*** Remove any abandoned boom or snare
*** Collect released oil in snare for all hotsie activities.
*** Do not strip bark from tree during hotsie activities
*** Refer to cleanup endpoints and methods sheet for guidance on how clean is clean.
*** Call the Environmental Unit (Lyle Trumbull, 610-710-1919) for cleanup endpoint guidance or if your crew is close to completing an area.
*** For cleaning bark-trees: use cold water pressure wash.

- PA1A
  Continue work in Penn Treaty Park, Penns Park North and South. Complete by 4/30/2005.
  Hotsie oil band on piers;
  Oil may be stranded on rocky areas between bays - Hotsie if contaminated
  Remove oiled debris.

- PA2A
  Pier 3 & 5:
  Continue clean up of marina. Maximize use of Pier 24, Lagoon, and open births to facilitate completion. Complete by 5/5/2005.
  S side of pier – hotsie structure as needed.

  Independence Seaport Museum (Hyatt Cove):
  Continue work thru completion thence roll crew into Chart House. Complete by 4/12/2005.
  Hotsie oiled band on north side of pier and back corner.
  Moshulu Dock
  Hotsie land side and south side seawall and pilings.

  Chart House Restaurant:
  Anticipate crew mob. on 4/13/2005. Complete by 5/3/2005.
  Hotsie oiled riprap in front of Chart House.
  Hotsie oiled band on wall on s side of restaurant.
  Secure Ops by 1530 dailey, no ops on Sunday.

  Bay N of Heliport:
  No current operations - anticipate mob. in of resources from PA 1 on 5/3/2005. Complete by 5/15/2005.
  Hotsie North and South side of heliport;
  Special attention to possible pavement on N corer of bay north of heliport. Manual removal as necessary;
  Hotsie oiled band along pier 40 seawall.

- PA2B:
  No current operations - anticipate mob. in of resources from PA 1 on 5/3/2005. Complete by 5/15/2005.
  Hotsie oil band on piers;
  Oil stranded on rocky areas between bays
  Hotsie if contaminated
  Remove oiled debris.

- PA2C:
  Wal Mart and Home Depot:
  No current operations - anticipate mob. in of resources from Pier 3 & 5 on 5/7/2005. Complete by 5/21/2005.
  Home Depot: hotsie oiled band especially north walls of bays;
  Walmart-Hotsie oiled band around entire pier as needed.

- PA2F:
  No current operations - anticipate mob. in of resources from Chart House on 5/3/2005. Complete by 5/25/2005.

Special Equipment / Supplies Needed for Assignment

Additional equipment will be made available from staging as per operational needs.

All unused equipment should be immediately returned to Staging 1/Lagoon for redeployment.

Special Environmental Considerations

Due to the wildlife concerns, operational activities are prohibited in the following locations: all of Monds Island, the NJ side of Petty Island. a 500ft. restricted zone has been established surrounding these areas. No on-water operations are permitted in this zone without first notifying EU.

Special Site-Specific Safety Considerations

Review Site Safety Plan (Contractors) With Special Attention To PPE, Slips, and Trips & Falls. All Personnel Are Required To Follow Decon Procedures In Site Safety Plan.

All on-water operations should be guided by the 3/21/05 "Temporary Safety Zone" established by the COTP-Philadelphia requiring minimal wake in the response area. Special safety precautions should be exercised as hot weather approaches. Response personnel should be alert to their surroundings and aware of the safety of those working with them.

Additional Information

Report situation status and resource changes each day at 1700, call 267-765-3447 or fax 215-923-4476. This is critical to allow us to plan properly and ensure you will have the resources you need to do your job tomorrow.

Fax all equipment and personnel Check-In sheets to 215-923-4476 with an attention line to "Resource Unit"

Please review attached protocol for handling oiled wildlife.

Wake incidents should be reported to the Waterways Management Branch at 215-271-4889 (7:30am to 4:00pm) or 215-271-4807 (After 4:00pm).

Ensure that all your equipment is barcoded, and that the Resource Unit has a list of your barcoded equipment.

Prepared By Signature:	Task Force: Task Force #2
Approved By Signature:	

Assignments

*** General cleanup notes:
*** Remove any abandoned boom or snare
*** Collect released oil in snare for all hotsie activities.
*** Do not strip bark from tree during hotsie activities
*** Refer to cleanup endpoints and methods sheet for guidance on how clean is clean.
*** Call the Environmental Unit (Lyle Trumbull, 610-710-1919) for cleanup endpoint guidance or if your crew is close to completing an area.
*** For cleaning bark-trees: use cold water pressure wash.

- PA3A:
  Kavearner Shipyard:
  Continue work in DD # 5. Complete by 4/9/2005.

- PA3B:
  Navy Yard:
  Continue work in yard piers and seawalls at south side of pier 6. Complete by 4/16/2005.
  Navy Yard (BTWN Pier 5 and DD # 3):
  Continue clean up of seawall and beach area. Complete by 4/7/2005.
  Navy Yard:
  Continue Hotsie work of seawall and piers north side of pier 5. Complete by 4/16/2005.

- PA3C:
  Navy Yard Seawall:
  Continue work at ferry landing to Admiral Row cobble wall. Complete by 4/20/2005.

- PA3D:
  Navy Yard Seawall:
  Continue seawall Hotsie work. Complete by 4/12/2005.

- PA3E:
  Turtle Cove II - Vane Bros and Coal Dock Coves:
  Clean beach areas by 4/12/2005, then continue with dock and seawall. Consult with EU on turtle migration prior to begining seawalls.

MAT Data:
Hotsie riprap and gabeon on north shore of Navy Yard bridge.
Hotsie rock wall entrance to basin and river as needed to remove crusty oil.
Hotsie piers as needed to remove crusty oil.
Hostie docks as needed to remove crusty oil.

Special Equipment / Supplies Needed for Assignment

Additional equipment will be made available from staging as per operational needs.

All unused equipment should be immediately returned to Staging 1/Lagoon for redeployment.

Special Environmental Considerations

Due to the wildlife concerns, operational activities are prohibited in the following locations: all of Monds Island, the NJ side of Petty Island. a 500ft. restricted zone has been established surrounding these areas. No on-water operations are permitted in this zone without first notifying EU.

- PA-6-A:
Continue work at Boeing & Foamex. Complete by 4/8/2005.
Complete Penn Terminal & PA 6-B1 by 4/11/2005.
Hotsie oil coat on concrete and steel seawalls from39.50.984, 75.20.481 up to 39.51.111, 75.20.097. (2) Manually remove oiled debris and hotsie oil coat on riprap from 39.51.111, 75.20.087 to 39.51.167, 75.19.917. (3) check cove for band on riprap – hotsie if necessary. (4) Hotsie seawall at power plant 39.51.316, 75.19.523, (5) hotsie seawall, wire-covered riprap
at Boeing facility at 39.51.462, 75.19.057. Use caution in this area.
Hotsie riprap and large debris on Fomex Beach. Manually remove small oiled debris and pavement @ 39.51.220 x 75.20.056, and asphalt pavement in area. Cut oiled weeds from top of pilings where oiled.
Hotsie riprap inside lagoon north of Fomex beach. Remove oiled debris.

- PA6B:
Continue progress in old shipyard. Complete by 4/14/2005.
Complete remainder of PA 6-B by 5/1/2005.
Hotsie seawalls and riprap from Ridley creek to Com Barry Bridge.
Hotsie seawalls and riprap at Degussa facility (39.50.159, 75.22.087) and Chester Water dept. (39.50.243, 75.21.905).
Use hand shovels to remove asphalt pavement on beach near water dept. (2) hotsie seawalls upstream of Chester Creek
from 39.50.461, 75.21.495 (near warehouses). (3) hotsie seawalls on upstream sides of shipyard slips. Note: pavement continues subsurface throughout the area.
From CMdr Barry Bridge to Pier:
Prune live oiled vegetation. Hotsie or scrape large woody vegetation. Spot hotsie riprap. Remove small oiled debris.

- PA6:
South of Banacor
There is a portion of the shoreline with dilapidated pier, rocks, trees and shrubs, with oiled line apparent for about 25'.
Hotsie affected areas and remove debris.
Cut shurbs at oiled line as needed. Area located within 1500' of Banacor.
North of this, remove pompom and woody debris.
Further north, remove sorbent boom tangled in wood pylons.

- PA8:
Crews mobing in from PA 6 on or about 5/1/2005.
Complete the remainder of PA 8 A-E by 5/15/2005
Cut oiled phragmites and branches at oiled line.
Hotsie riprap, docks, and seawalls

- PA8C:
Remove tar balls and oiled debris

- PA8E:
Downstream cove: Hotsie riprap

ICS 204 - Assignment List

Incident: MT Athos I	Branch:
Period: Period 31 (4/5/2005 06:00 - 4/19/2005 06:00)	Division/Group: Delaware / Pennsylvania
Prepared By Signature:	Task Force: Task Force #5
Approved By Signature:	

Incident Resources - Manpower

Supplier	Resource Type	Description	Quantity	Size	Status
Task Force #5					
Global Remediation Service	Manpower: Responder	Spill Tech	2 each		Assigned
Kens Marine Service	Manpower: Responder	Spill Tech	33 each		Assigned
Miller Environmental Group,	Manpower: Responder	Spill Tech	19 each		Assigned

Assignments

*** General cleanup notes:
*** Remove any abandoned boom or snare
*** Collect released oil in snare for all hotsie activities.
*** Do not strip bark from tree during hotsie activities
*** Refer to cleanup endpoints and methods sheet for guidance on how clean is clean.
*** Call the Environmental Unit (Lyle Trumbull, 610-710-1919) for cleanup endpoint guidance or if your crew is close to completing an area.
*** For cleaning bark-trees: use cold water pressure wash.

Continue focused debris removal in PA 7 - M, N, & O. Use additional 25 resources ETA 4/7/2005, to complete by 4/30/2005.
Continue bag removal with tides as permitted.
Continue MLLW monitoring and spot removal of rocks, mats and sand in A-G as tides permit.

- PA7:
  Hand or mechanical removal of debris and tar patties.
  Cold water pressure wash of oiled root systems.
  Scrape or hotsie large debris.
  Hotsie or scrape oiled woody debris greater than 6 inches in diameter
  Remove oiled woody debris less than 6 inches in diameter
  Cut oiled non-woody vegetation at oiled line.
  Use only established paths on interior of Island.

Special Equipment / Supplies Needed for Assignment

Additional equipment will be made available from staging as per operational needs.

All unused equipment should be immediately returned to Staging 1/Lagoon for redeployment.

Special Environmental Considerations

Due to the wildlife concerns, operational activities are prohibited in the following locations: all of Monds Island, the NJ side of Petty Island. a 500ft. restricted zone has been established surrounding these areas. No on-water operations are permitted in this zone without first notifying EU.

Special Site-Specific Safety Considerations

Review Site Safety Plan (Contractors) With Special Attention To PPE, Slips, and Trips & Falls. All Personnel Are Required To Follow Decon Procedures In Site Safety Plan.

All on-water operations should be guided by the 3/21/05 "Temporary Safety Zone" established by the COTP-Philadelphia requiring minimal wake in the response area. Special safety precautions should be exercised as hot weather approaches. Response personnel should be alert to their surroundings and aware of the safety of those working with them.

*** Do not strip bark from tree during hotsie activities
*** Refer to cleanup endpoints and methods sheet for guidance on how clean is clean.
*** Call the Environmental Unit (Lyle Trumbull, 610-710-1919) for cleanup endpoint guidance or if your crew is close to completing an area.
*** For cleaning bark-trees: use cold water pressure wash.

Continue working with assigned complement in NJ 5 A-G.
Continue work in NJ 3 J-L.

- NJ3A-F:
  Complete by 4/20/2005
  Hotsie or scrape oiled woody debris greater than 6 inches in diameter
  Remove oiled woody debris less than 6 inches in diameter
  Mechanical raking /or manual turn over of cobble or small boulders - high volume water flush or hotsie
  Remove buried oil/tar mats

- NJ3G:
  Complete by 4/20/2005
  South to Ferry Dock
    Hotsie or scrape oiled woody debris greater than 6 inches in diameter
    Remove oiled woody debris less than 6 inches in diameter
    Manual removal utilizing mechanical hauling of fine gravel and pebbles
    Manual or mechanical removal of oil coated cobble and mechanical hauling
    Mechanical raking /or manual turn over of cobble or small boulders - high volume water flush or hotsie
    Hotsie rock around West Deptford Boat Ramp
    Remove buried oil just downstream of W Deptford Boat Ramp (1-2' below surface)
    Cold water pressure wash all oiled live trees

- Ferry Dock to NJ3H :
  Sand/small cobble beach
  Remove any tar mats
  Mechanical removal oil coated pebbles and cobble
  Hotsie or scrape oiled woody debris greater than 6 inches in diameter
  Remove oiled woody debris less than 6 inches in diameter
  Manual removal of oily debris as necessary
  Cold water pressure wash all oiled live trees
  Manual removal of tar mats
  Manually locate and identify all buried oil areas and manual removal with the use of machinery
  Note: High public use

- NJ3H:
  Remove any tar mats
  Hotsie or scrape oiled woody debris greater than 6 inches in diameter
  Remove oiled woody debris less than 6 inches in diameter
  Small cobble, manual removal (possible mechanized hauling)
  National Park down to Woodbury creek
  Coarse grain sandy beach /riprap
  Hotsie riprap/consider high volume warm water
  Move cobble, remove tar, remove tar mats, hotsy cobble

 © 1997-2005 dbSoft, Inc.

Manually remove small cobble - use mechanized hauling
Note: High public use area

- NJ3I:
Hotsie or scrape oiled woody debris greater than 6 inches in diameter
Remove oiled woody debris less than 6 inches in diameter
Cold water pressure wash all oiled live trees

- NJ3J:
Continue oiled phragmites removal adjacent to Riverwinds in NJ 3-J. Complete by 4/8/2005.
Cut oiled phragmites at oiled line.
Removed oiled mat from southern side cover
Remove oiled (drag) woody debris - drag from high public area and hotsie
Hotsie or scrape oiled woody debris greater than 6 inches in diameter
Remove oiled woody debris less than 6 inches in diameter
Move cobble, remove tar, remove tar mats, hotsie cobble
Cold water pressure wash all oiled live trees
Note: High public use area

- NJ3K:
Complete by 4/23/2005.
Manual removal of oiled gravel/patties
Cut non-woody vegetation/branches at oiled line.
Cold-water pressure wash oiled live trees
Hotsie or scrape oiled woody debris greater than 6 inches in diameter
Remove oiled woody debris less than 6 inches in diameter
Hotsie boulders

Special Instructions for Division / Group

- NJ3L:
Complete by 4/23/2005.
Citgo Beach
Sand cobble /boulders
Move cobble, remove tar mats/asphalt; hotsie cobble
Hotsie or scrape oiled woody debris greater than 6 inches in diameter
Remove oiled woody debris less than 6 inches in diameter
Remove oiled sediment to 1 foot depth along bank or MAIN DITCH
Agitate sediment to expose/diffuse buried oil - do not rake below clay layer
Note: do not rake below clay layer

Special Equipment / Supplies Needed for Assignment

All unused equipment should be immediately returned to Staging for redeployment.

Special Environmental Considerations

Due to the wildlife concerns, operational activities are prohibited in the following locations: all of Monds Island, the NJ side of Petty Island. a 500ft. restricted zone has been established surrounding these areas. No on-water operations are permitted in this zone without first notifying EU.

ICS 204 - Assignment List

Incident: MT Athos I	Branch:
Period: Period 31 (4/5/2005 06:00 - 4/19/2005 06:00)	Division/Group: Delaware / Pennsylvania
Prepared By Signature:	Task Force: Task Force #8
Approved By Signature:	

Assignments

*** General cleanup notes:
*** Remove any abandoned boom or snare
*** Collect released oil in snare for all hotsie activities.
*** Do not strip bark from tree during hotsie activities
*** Refer to cleanup endpoints and methods sheet for guidance on how clean is clean.
*** Call the Environmental Unit (Lyle Trumbull, 610-710-1919) for cleanup endpoint guidance or if your crew is close to completing an area.
*** For cleaning bark-trees: use cold water pressure wash.

Consolidate work into PA4-A - PA4-E.
Complete work in PA 4-E by 4/28/2005 with addition of hot water flush.

- PA-4A:
I95 Bridge on Schuylkill River south to start of wooden bulkhead
Rip rap/mudflat/small cove at southern end of zone
Hotsie oiled riprap throughout the entire zone
Cut the branches from live oiled vegetation at oiled line.
High Pressure Cold Water wash (HPCW) the trunks and roots of oiled live trees throughout this segment
(notes: hotsie from land – 50-75' of mudflats @ low tide, access difficult – two levels of reeds and steep hill to rip rap, see general notes below)

- PA-4B:
Complete work in PA 4-B by 4/10/2005.
Wooden bulkhead to the mouth of the Schuylkill River
Hotsie oiled riprap throughout the entire zone
Cut the branches from live oiled vegetation at oiled line.
Pressure wash or scrape the trunks and roots of oiled live trees throughout this segment
Check wooden bulkhead by boat and hotsie if oiled
(notes: hotsie from land – 50-75' of mudflats @ low tide, access difficult – two levels of reeds and steep hill to rip rap, see general notes below)

- PA-4C:
Mouth of the Schuylkill River to 500 feet downstream

- PA- 4D:
Complete work in PA 4-D by 5/12/2005.
Provide crews for debris sweeps of PA 4 A&C as available.
Shoreline from PA-4C to the old Army Corps of Engineers (ACOE) Dock
Hotsie oiled riprap throughout the entire zone
Cut the branches from live oiled vegetation at oiled line.
Pressure wash or scrape the trunks and roots of oiled live trees throughout this segment
(notes: access to area is difficult but not as difficult as PA-4A or PA-4B)
Old ACOE Dock and Breakwater
Hotsie old dock and breakwater
Cut the branches from live oiled vegetation at oiled line.
Old ACOE dock downstream to new ACOE dock
Hotsie rip rap as needed
Complete hotsie of ACOE dock from barge (dock should be complete)
Cut the branches from live oiled vegetation at oiled line.
(notes: access to the upstream ½ of this segment is difficult)

ICS 204 - Assignment List

Incident: MT Athos I	Branch:
Period: Period 31 (4/5/2005 06:00 - 4/19/2005 06:00)	Division/Group: Delaware / Pennsylvania
Prepared By Signature:	Task Force: Task Force #8
Approved By Signature:	

Old Fort Mifflin Dock
Hotsie dock and remove debris/tar patties from cove

Special Equipment / Supplies Needed for Assignment

All unused equipment should be immediately returned to Staging for redeployment.

Special Environmental Considerations

Due to the wildlife concerns, operational activities are prohibited in the following locations: all of Monds Island, the NJ side of Petty Island. a 500ft. restricted zone has been established surrounding these areas. No on-water operations are permitted in this zone without first notifying EU.

Special Site-Specific Safety Considerations

Review Site Safety Plan (Contractors) With Special Attention To PPE, Slips, and Trips & Falls. All Personnel Are Required To Follow Decon Procedures In Site Safety Plan.

All on-water operations should be guided by the 3/21/05 "Temporary Safety Zone" established by the COTP-Philadelphia requiring minimal wake in the response area. Special safety precautions should be exercised as hot weather approaches. Response personnel should be alert to their surroundings and aware of the safety of those working with them.

Additional Information

Report situation status and resource changes each day at 1700, call 267-765-3447 or fax 215-923-4476. This is critical to allow us to plan properly and ensure you will have the resources you need to do your job tomorrow.

Fax all equipment and personnel Check-In sheets to 215-923-4476 with an attention line to "Resource Unit"

Please review attached protocol for handling oiled wildlife.

Wake incidents should be reported to the Waterways Management Branch at 215-271-4889 (7:30am to 4:00pm) or 215-271-4807 (After 4:00pm).

Ensure that all your equipment is barcoded, and that the Resource Unit has a list of your barcoded equipment.

*** General cleanup notes:
*** Remove any abandoned boom or snare
*** Collect released oil in snare for all hotsie activities.
*** Do not strip bark from tree during hotsie activities
*** Refer to cleanup endpoints and methods sheet for guidance on how clean is clean.
*** Call the Environmental Unit (Lyle Trumbull, 610-710-1919) for cleanup endpoint guidance or if your crew is close to completing an area.
*** For cleaning bark-trees: use cold water pressure wash.

Consolidate work into PA 4-F - PA 4-H.
Continue ops with current force strength.

- PA-4G:
  Complete PA 4-G by 4/23/2005
  Downstream of Sunoco (Ft. Mifflin) to where rip rap ends
  Rip rap/large cobble beach/pylons
  Hotsie rip rap as needed
  Hotsie or scrape old wooden pier supports
  Hotsie or scrape oiled woody debris greater than 6 inches in diameter
  Remove oiled woody debris less than 6 inches in diameter
  Cut oiled branches from live tree at oiled line.
  Manually remove matting/pavement
  Remove asphalt and heavy oiled sediment from around and beneath cobbles; hotsie cobbles;
  PWCW or scrape the trunks and roots of oiled live trees throughout this segment
  (notes: canal behind beach feeds moat; do not remove snare and sausage boom here)
  Refer to general notes below

- PA-4H:
  Complete PA 4 F&H by 5/5/2005
  Area from end of rip rap downstream to fire department building/boat ramp
  Sandy beach/old wooden pilings/concrete piers
  Hotsie concrete piers
  Hotsie or scrape old wooden pier supports
  Hotsie or scrape oiled woody debris greater than 6 inches in diameter
  Remove oiled woody debris less than 6 inches in diameter
  Remove asphalt and heavy oiled sediment from around and beneath cobbles; hotsie cobbles;
  Cut oiled branches from live tree at oiled line.
  Pressure wash or scrape the trunks and roots of oiled live trees throughout this segment
  Refer to general notes below

- PA-4I:
  Complete PA 4-I by 4/7/2005
  Shoreline from fire department building/boat ramp to Sunoco Hog Island facility
  Sandy beach/old wooden pilings/concrete piers
  Hotsie concrete piers
  Hotsie or scrape old wooden pier supports
  Hotsie or scrape oiled woody debris greater than 6 inches in diameter
  Remove oiled woody debris less than 6 inches in diameter
  Cut oiled branches from live tree at oiled line.

 © 1997-2005 dbSoft, Inc.

Pressure wash or scrape the trunks and roots of oiled live trees throughout this segment
Refer to general notes below

- PA-4J1:
Large cove just south of Sunoco Hog Island
Sand/cobble beach/old seawall/pylons
Hotsie or scrape old wooden piers and bulkheads
Hotsie rip rap as needed
Hotsie or scrape oiled woody debris greater than 6 inches in diameter
Remove oiled woody debris less than 6 inches in diameter
Remove asphalt mats on beach
Refer to general notes below

- PA-4J2:
Area from cove downstream to the seawall
Sand beach/sand flat
Hotsie or scrape oiled woody debris greater than 6 inches in diameter
Remove oiled woody debris less than 6 inches in diameter
Hotsie rock piles and redistribute rocks
Manually remove tar mats and small tar patties
(notes: be careful not to drive oil into sediment, place black matting underneath the debris and rocks during large hotsie operations such as piles of rocks or woody debris).
Refer to general notes below

Special Instructions for Division / Group

- PA-4J3:
Rock wall/small cove
Remove small tar patties from sand flat
Pressure wash live tree roots or trunk - cold water
Hotsie upstream quarter of wall, focus on cracks to mobilize and collect released oil. (try land and water sides)
Hotsie or scrape oiled woody debris greater than 6 inches in diameter
Remove oiled woody debris less than 6 inches in diameter
Monitor rock wall for seepage, place snare to collect floating oil if observed
Refer to general notes below

- PA-4J4:
Western end of rock wall downstream to the border or PA-4/PA-5
Rip rap/sandy beach
Hotsie rip rap as needed
Remove patties from sand flat
Pressure wash live tree roots – cold wash
Hotsie or scrape oiled woody debris

Special Equipment / Supplies Needed for Assignment

All unused equipment should be immediately returned to Staging for redeployment.

*** General cleanup notes:
*** Remove any abandoned boom or snare
*** Collect released oil in snare for all hotsie activities.
*** Do not strip bark from tree during hotsie activities
*** Refer to cleanup endpoints and methods sheet for guidance on how clean is clean.
*** Call the Environmental Unit (Lyle Trumbull, 610-710-1919) for cleanup endpoint guidance or if your crew is close to completing an area.
*** For cleaning bark-trees: use cold water pressure wash.

50 Additional personnel to NJ 4-5 by 4/8/2005.
Continue tar mat, woody debris, and small cobble removal. Scrape/Hotsie large wood.
Anticipate high volume flushing of cobble/riprap in heavely oiled area's on or about 4/15.

- NJ4A:
  Mechanized removal of mats, mechanical removal of oil cobbles, gravel
  Manual removal of oiled trash (maintenance)
  Hotsie or scrape oiled woody debris greater than 6 inches in diameter
  Remove oiled woody debris less than 6 inches in diameter
  Cold-water pressure wash

- ST Services Dock:
  Hotsie pier /bulkhead to remove oil residue

- Valero Refinery:
  Hotsie pier/bulkhead to remove oil residue
  Note: small residential area

- NJ4B:
  Cionell Creek to Pier at Rapauno Products
  Riprap - high volume warm water flush
  Boat Ramp at Rapauno Products- locate and remove visible and buried asphalt mats.

- NJ4C:
  Dupont Property
  Remove oil and oiled debris from wooden bulkhead and at corner of pier
  Remove oiled trash
  Riprap - high volume warm water flush
  Hotsie bulkhead
  Note: Beware of pipelines in area.
  Note: NO WORK AT MONDS ISLAND: no entrance allowed.

- NJ4D:
  Floodgate Road South
  Hotsie floodgate and riprap w/in 200' on both sides of floodgate
  Mechanical removal of oiled pebbles, gravel and cobble.
  Cut oiled phragmites at oiled line.
  Remove oiled floatable debris as necessary (maintenance)
  Hotsie or scrape oiled woody debris greater than 6 inches in diameter
  Remove oiled woody debris less than 6 inches in diameter
  Remove oiled cobble, remove tar, remove large tar mats, hotsie cobble (at northern point).
  From cove to point at old Canal
  Mechanical/manual removal of oiled mat

ICS 204 - Assignment List

Incident: MT Athos I	Branch: Deputy Operations Section
Period: Period 31 (4/5/2005 06:00 - 4/19/2005 06:00)	Division/Group: Staging #2
Prepared By Signature:	Task Force:
Approved By Signature:	

Special Site-Specific Safety Considerations

Review Site Safety Plan(Contractors) With Special Attention To PPE, Slips, and Trips & Falls. All Personnel Are Required To Follow Decon Procedures In Site Safety Plan.

All on-water operations should be guided by the 3/21/05 "Temporary Safety Zone" established by the COTP-Philadelphia requiring minimal wake in the response area. Special safety precautions should be exercised as hot weather approaches. Response personnel should be alert to their surroundings and aware of the safety of those working with them.

Additional Information

Report situation status and resource changes each day at 1700, call 267-765-3447 or fax 215-923-4476. This is critical to allow us to plan properly and ensure you will have the resources you need to do your job tomorrow.

Fax all equipment and personnel Check-In sheets to 215-923-4476 with an attention line to "Resource Unit"

Please review attached protocol for handling oiled wildlife.

Wake incidents should be reported to the Waterways Management Branch at 215-271-4889 (7:30am to 4:00pm) or 215-271-4807 (After 4:00pm).

Ensure that all your equipment is barcoded, and that the Resource Unit has a list of your barcoded equipment.

Environmental Unit	L. Trumbull		610-710-1919	
Safety Officer	E. Doyle/A. Gresham		302-293-8959/8960	

Assignments

MAT will assess and compile cleanup data and identify areas requiring additional cleanup resources. Conduct shoreline surveys according to MAT plan. Report information to Planning for coordination of response resources.

Description of Work

On standy to assess newly reported areas requiring cleanup resources. Compile list of areas worked and conduct targeted site visit to assess completeness.

Location of Work

Teams will be deployed by EUL as necessary.

Work Assignment Special Instructions

All reports will reference Areas as noted on attached maps.

Special Equipment / Supplies Needed for Assignment

Additional equipment will be made available from staging as per operational needs.

All unused equipment should be immediately returned to Staging for redeployment.

Special Environmental Considerations

Due to the wildlife concerns, operational activities are prohibited in the following locations: all of Monds Island, the NJ side of Petty Island. a 500ft. restricted zone has been established surrounding these areas. No on-water operations are permitted in this zone without first notifying EU.

Special Site-Specific Safety Considerations

Review Site Safety Plan(Contractors) With Special Attention To PPE, Slips, and Trips & Falls. All Personnel Are Required To Follow Decon Procedures In Site Safety Plan.

All on-water operations should be guided by the 3/21/05 "Temporary Safety Zone" established by the COTP-Philadelphia requiring minimal wake in the response area. Special safety precautions should be exercised as hot weather approaches. Response personnel should be alert to their surroundings and aware of the safety of those working with them.

Site Safety Officer on Duty Today: Archie Gresham @ 302-293-8960

TO: ALL PERSONNEL

- **All safety rules are to be followed.**
- **Look out for your fellow responders.**
- **Use Common Sense.**
- **Do Not Take Chances.**
- **If unsafe, STOP and talk to your supervisor.**
- **ZERO Injuries is our goal.**

Site Description: On-Water & Beach Cleanup Activities

Potential Hazards: Slippery and uneven surfaces; exposure to weathered oil; cold/heat exposure; slips, trips, and falls; wave and wake concerns while conducting boat operations.

To report Wake Incidents to the Waterway Management Unit of the USCG during the day (0730 to 1600) call 215-271-4889. After hours and on week-ends call 215-271-4807.

GENERAL SAFETY CONCERNS

ADHERENCE TO ALL PPE REQUIREMENTS

Level D (modified)

- **Tyvek-type and /or rain gear (see Protective Clothing Matrix).**
- **Hard hat when overhead hazards exist (also Hogg Island area)**
- **Safety glasses with side shields (ANSI approved) /goggles/face shield**
- **Work shoes**
- **Disposable boots**
- **Chemical resistant gloves**
- **Hearing protection**

NOTE: Eye Protection is NOT OPTIONAL. ANSI Approved Safety Eye Wear with Side Shields is the minimum eye protection requirement for all activities.

Personal Flotation Equipment (PFDs) are required to be worn properly—fully secured—when working on or near the waters edge. UNSECURED PFDs MEANS NO PFDs!

Gloves and sleeve area and boot and pant leg area should be taped to prevent contact with product.

Use of tobacco products of any kind and eating/drinking is restricted to designated areas only and only following proper personal decontamination. Contractors should clearly designate break/rest areas. Otherwise such activity is prohibited.

Special notes:

- **In the event clean up activities involve entry to industrial/commercial facilities, safety and security rules of the facility will apply as long as the safety rules do not contradict the Site Safety Plan.**
- **ALL INJURIES REGARDLESS OF SEVERITY MUST BE REPORTED TO THE OPERATIONS CENTER AND SAFETY IMMEDIATELY AND A INCIDENT REPORT MUST BE FORWARDED TO THE FIELD SAFETY REPRESENTATIVE**
- **ALL PERSONNEL VISITING FIELD WORK AREAS MUST BE WEARING THE APPROPRIATE PPE.**
- **Handling of distressed or dead animals is restricted to regulatory agency personnel. If found, report to the area supervisor who will notify the appropriate person.**

VESSEL SAFETY

The operator is responsible for the safety of the crew and vessel at all times. The vessel shall never be operated in a manner that threatens safety of the crew or vessel. The operator is to ensure that ALL personnel aboard the vessel are wearing lifejackets AT ALL TIMES! Under no circumstances are personnel to enter the water while the vessel is underway or the vessel's engine(s) is(are) running.

It is the operators' responsibility to ensure the vessel is seaworthy and in safe operating condition prior to leaving shore. The operator will inspect the vessel and determine that all required operational and safety equipment is on board and in proper working condition.

The operator is responsible for safe transport, launch, operation, and recovery of the vessel.

In the event of a boating accident, the operator is the primary person responsible for the vessel and crew. If vessel or crew is in imminent danger, the operator should contact the US Coast Guard immediately.

Ensure vessels are not overloaded with personnel or equipment, and consult vessel capacity according to the boat plate or sticker.

All vessels will carry on board an air horn to be available for emergency sound signaling.

USE THE RIGHT VESSEL FOR THE RIGHT JOB!

Stop Vessel Operations Criteria (Weather)

Vessels will cease operations when any of the following occur:

1. Visible lightning strike
2. 25 knot winds
3. Sea state:

>60' vessels: 6'	30'-60' vessels: 5'	20'-30' vessels: 4'	<20' vessels: 3'

4. Whenever the Safety Officer or one of his assistants deems operations too hazardous to continue.
5. Whenever the vessel operator deems it too hazardous to continue operations.

Vessel operators and response supervisors need not wait for a Safety Officer to deem operations too dangerous. If you feel that the conditions are too hazardous to safely operate in, discontinue operations, notify your supervisor, and then notify the Safety Officer. You may be the first responder to experience hazardous conditions, and your input to the Safety Officer may provide a valuable heads-up to the rest of the command.

Nighttime vessel operations and restrictions

All vessels with lengths of 20 feet or less are required to be safely moored/recovered prior to sunset.

Flat-bottom, “john boat” style boats are not permitted to operate at night and should be safely moored/recovered prior to sunset.

All vessels not specifically restricted from nighttime ops, as detailed above, may only operate after sunset with the proper use of navigation lights as required by Chapter I of the Navigation Rules.

Personal Protective Equipment (PPE) requirements:

All responders working on or near the water must wear a Personal Floatation Device (PFD). Near means within 3 feet.

During Winter Operations:

Responders performing the following operations must wear “Mustang” exposure suits:

- Waterborne SCAT teams
- Boom tending and placement teams
- Waterborne vessel decon teams
- Waterborne wildlife recovery teams
- Permanent boat drivers/crew

Crews of vessels equipped with enclosed, heated cabins, where the crew will primarily remain, are excluded from the exposure suit requirement.

Passengers are defined as personnel who will be transported by boat for a short distance, less than a half mile, to review a job, task or beach area or whom are being transported to a remote work site.

Passengers are not required to wear a mustang suit as long as the boat transport is near shore, no more than 200’ from the shore. However, if the boat has to go further than 200’ into the river or cross the river –mustangs are required.

Requests for deviation from the above requirements should be directed to the Site Safety Officer, Ed Doyle (302) 293-8959.

SAFE REMOVAL OF PPE

As a reminder, early in the response we experienced two incidents injuries were personnel were removing PPE using a box cutter. In one incident a person cut himself while changing the blade in a box cutter. In the other instance, the individual inadvertently lacerated both his legs. This cut was severe enough to require 7 stitches and could have been potentially life threatening if first aid had not been rendered by a fellow worker who stopped the flow of blood with a pressure bandage.

The use of box cutters, knives, or razors to remove PPE is strictly prohibited.
Utility scissors are widely available in every work zone. If you do not have a pair of utility scissors or access to a pair, inform your supervisor or zone manager immediately, and every effort will be made to provide you with a pair.

Conference Call Procedure
MV Athos I

From time to time, the Unified Command will have a need to convene via conference call. Their needs could range from situational updates to critical information requiring Unified Command decisions.

The Unified Command will initiate conference calls by contacting the Planning Section Chief. The Planning Section Chief will require a list of persons that should be invited to participate in the Conference Call, the preferred time of the call, ask whether or not a scribe is required and a suggested agenda.

The Planning Section Chief will call ConferencePlus and schedule the call. The Planning Section Chief will then send an email to all invited conference call participants, which gives the call-in particulars and the agenda.

The Situation Unit and Operations and Planning must have a representative on the call to present information according to agenda.

WEEKLY UNIFIED COMMAND CONFERENCE CALL IN NUMBER:
Dial-In Number: 1 (888) 287-5343 (to join the audio conference call)
Alternate Dial-In: 1 (847) 619-6483
Pass code: 9285423# - If you call in before the moderator, you will be placed on hold with music background until the moderator

MODERATOR CALL IN ADDITIONAL NUMBER: 5233443

Agenda - Unified Command Meetings
Thursdays -- 0900hrs

1.	Introductions – UC reps self-introductions	All participants
2.	Situation Brief	Situation Unit Leader
3.	Planned Actions	Planning/Ops Chief
4.	Critical Issues/Needs	Operations Chief
5.	Review of Open Action Items	Situation Unit Leader
6.	Long Range Plan	Steve Kegelman
7.	New Jersey comments	NJ UC Rep
8.	Pennsylvania comments	PA UC Rep
9.	Delaware comments	DE UC Rep
10.	FOSC comments	FOSC
11.	Announce any necessary additional UC Meetings (other than Mondays)	RP
12.	Final remarks	RP
13.	*This concludes the Command and General Staff Meeting. Unified Command Members only from this point on.*

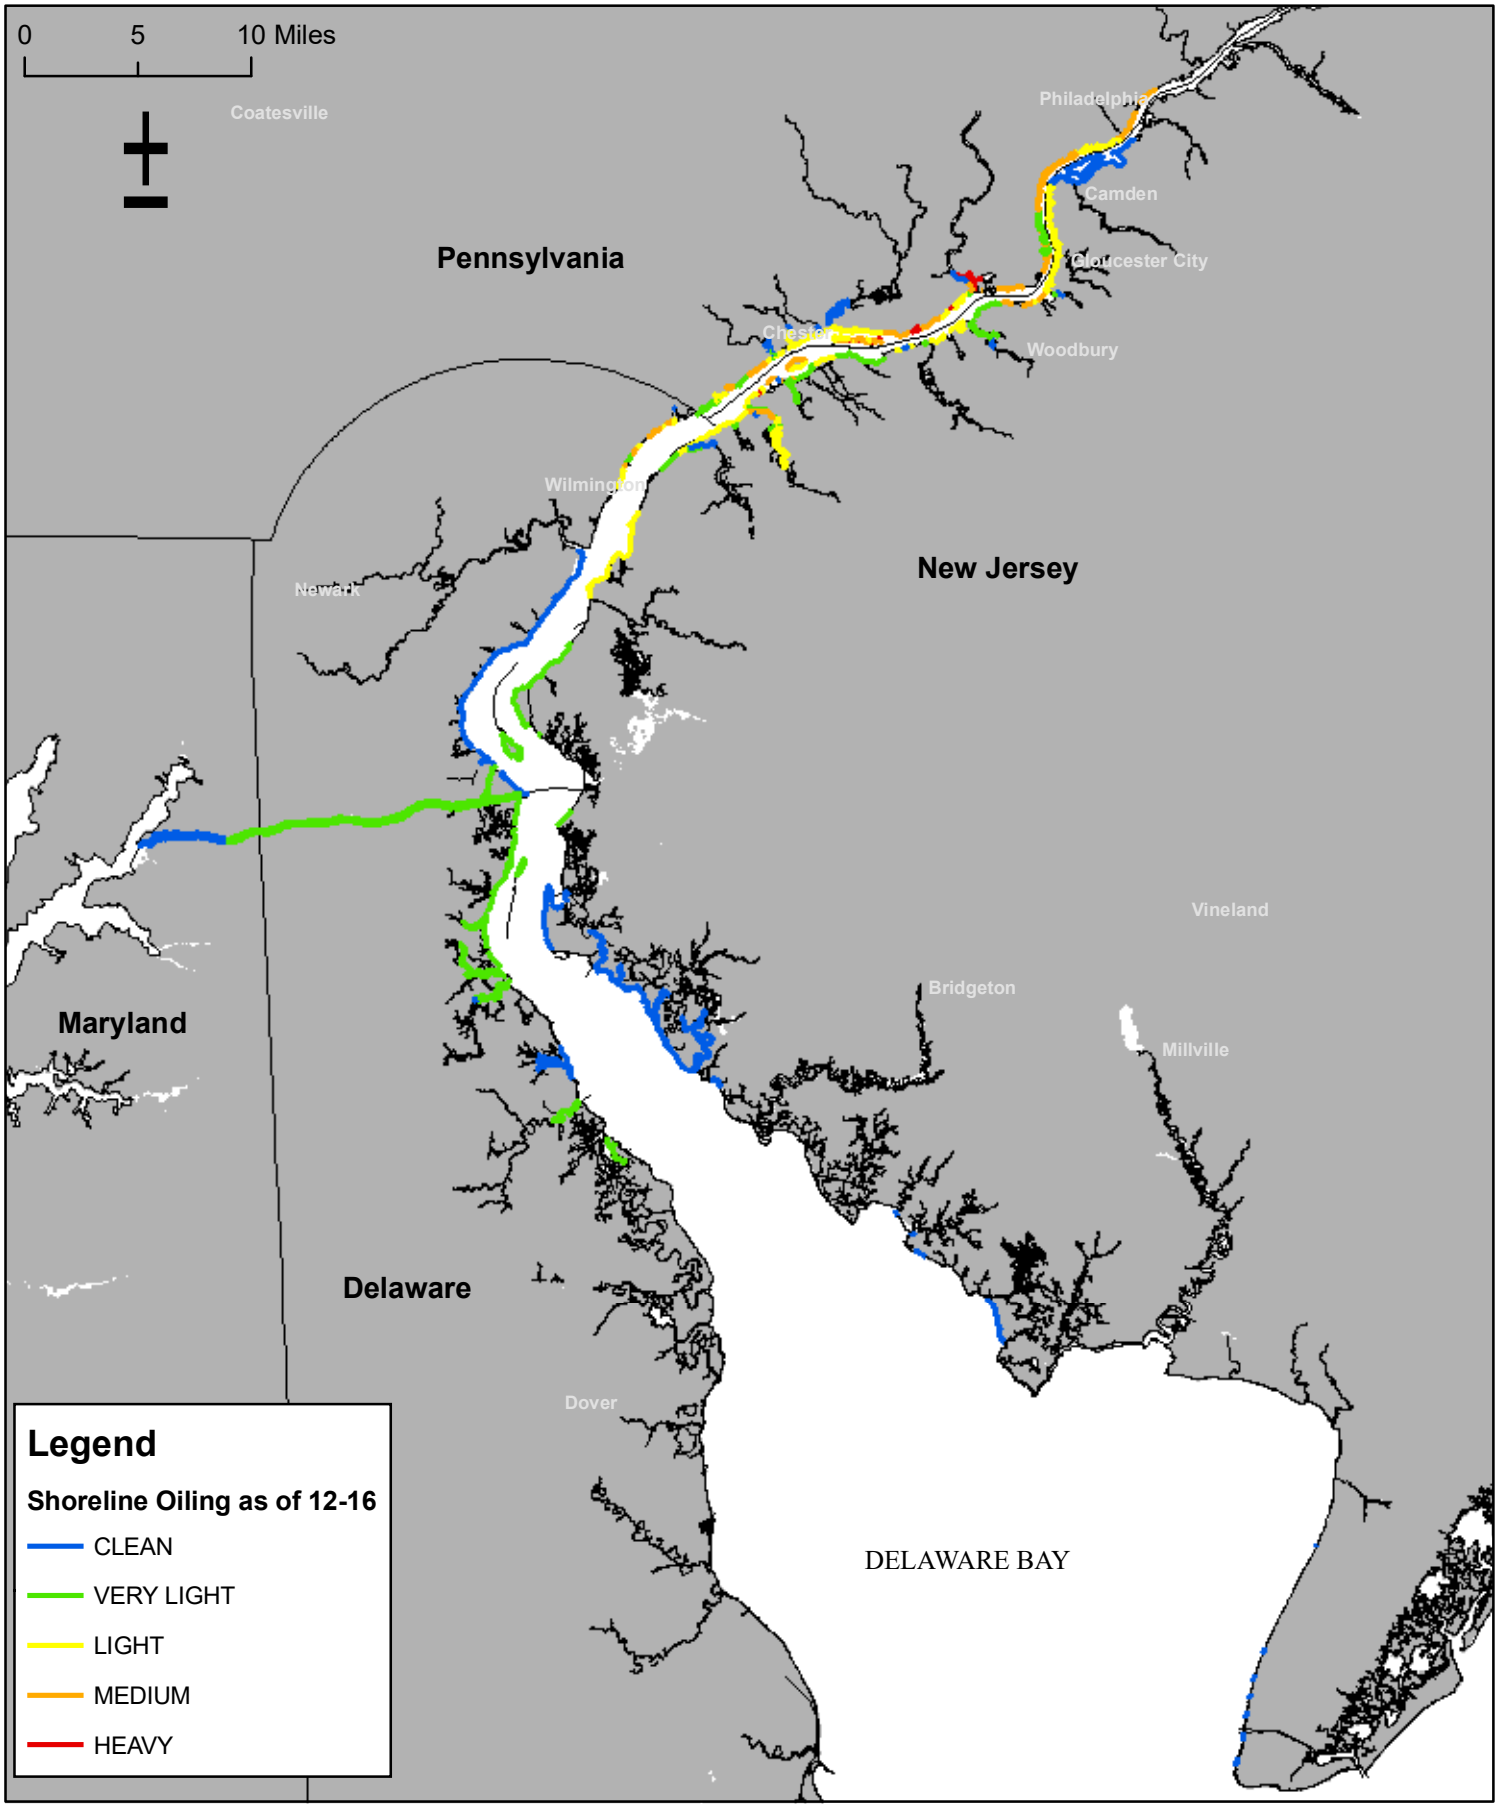
M/V Athos I, Delaware River, NJ/PA

Shoreline Oiling as of 12/16/2004

Graphic does not represent precise amounts or locations of oil.

USE ONLY AS A GENERAL REFERENCE



Objective:

Removal of gross oil before the focus is shifted to final cleanup activities

Gross (i.e., bulk) oil removal is proposed as a means to maximize the environmental benefit and effectiveness of shoreline cleanup operations. Shoreline segments have been prioritized (attached) based on the amount of oil, and the presence of sensitive resources or high public access.

As cleanup activities complete gross oil removal, response resources will be redeployed by the Operations Section according to the listed priorities. The decision to move the resources within a division will be the responsibility of the Division Supervisors. The Environmental Unit and SCAT Teams will be available to provide suggestions and/or guidance.

Operations Priorities for Cleanup

Priority 1 Heavy Oil With Special Issues	Priority 2 Heavy Oil No Special Issues	Priority 3 Moderate Oil With Special Issues	Priority 4 Moderate Oil No Special Issues	Priority 5 Light Oil With Special Issues	Priority 6 Very Light Oil With Special Issues	Priority 7 Light Oil No Special Issues	Priority 8 Very Light Oil No Special Issues

Conduct cleanup with minimal damage to environmental resources. i.e. Do not drive spilled oils into sediments by foot / mechanical traffic

A SCAT Special Issue Team (SIT) will evaluate historic, special environmental, or high-public access areas to provide more detailed and additional cleanup requirements.

Shoreline Type	Cleanup Endpoint	Allowable Cleanup Methods
Sand Flats (hard surface e.g. Tinicum I. NJ side)	General: No recoverable surface oil, buried oil layers or tarballs larger than dimes; no more than stain on sand	Manual removal with shovels/rakes and squeegees; small equipment (bobcat) to remove oil and oiled surface and subsurface sand; minimize removal of clean sand on and under oiled layers; Minimize equipment (bobcat) travel over oiled surfaces.
	Special: TBD by SIT (Special Issue Team)	
Sand Beaches; Mixed Sand and Fine Gravel Beaches	General: No recoverable surface oil, buried asphalt pavements or tarballs larger than dimes; no more than stain on gravel	Manual removal with shovels/rakes; minimize removal of clean sediments on/under oiled layers; small equipment (bobcat)to remove oil and oiled surface/subsurface sand and gravel. Minimize small equipment (bobcat)travel over oiled surfaces. Mechanical relocation of fine gravels into piles for flushing, including use of high-pressure/hot-water washing (hotsie), with containment/recovery of released oil; return gravel to original location and contour. Use of heavy equipment will require additional approval.
	Special: TBD by SIT	
Course Gravel Beaches/Fill (e.g. cobbles, and larger)	No more recoverable or potentially mobile oil on surface, doesn't rub off on contact Visible heavy product that could be mobilized should be removed.	Manual removal of surface oil using low pressure flushing and high-pressure/hot-water washing (hotsie), with containment/recovery of released oil; return gravel to original location and contour. Use of heavy equipment will require additional approval by the SIT.
	Special: TBD by SIT	
Riprap/Stone Seawalls **Solid Seawall, Bulkheads and Docks**	General: No more recoverable or potentially mobile oil on surface, doesn't rub off on contact Visible heavy product that could be mobilized should be removed.	Flushing and high-pressure/hot-water washing (hotsie), as needed. Containment/recovery of released oil.
	Special: No more recoverable or potential mobile oil on surface; Stop cleanup efforts when all oil is removed other than a stain. Additional cleaning or replacement of riprap to be considered by SIT.	In high-public access or special environmental / historic areas (e.g., Ft. Mifflin, eagle nesting, others to be determined): may request use of SWAs (surface washing agents) or special cleanup efforts for use as need to meet endpoint.

Mud Flats (e.g. soft surface, steps will push oil in sediments)	General: No potentially mobile oil.	To be determined on a site-specific basis by SIT.
Marshes	General: Oil on vegetation no longer wipes off on contact. No remaining recoverable or potentially mobile oil in accessible areas. (Accessible areas will be identified by SIT.)	To be determined on a site-specific basis by SIT. Options (cutting, In-situ-Burn, flushing, manual pickup of pooled oil, monitoring) to be determined on site-specific basis.
	Special: Other removal options will be considered by Environmental Unit.	

Debris Recovery Guidelines[1]

- Report dead and live wildlife to triage center at 215-365-1558. Collect and bag all dead wildlife.
- Manual removal of oiled debris that can be easily picked up and bagged.
- For small unoiled debris that can be easily picked up, move to the supra tidal zone if it has the potential to become oiled in its current location.
- Leave unoiled debris in place if it does not have the potential to become oiled.
- Cut and remove oiled logs < 6 inches in diameter (cut in into lengths < 6 feet).
- Manual removal of oiled debris (other than logs) < 6 inches in diameter and < 6 feet in length.
- Clean large (> 6 inches in diameter and/or 6 feet in length) oiled debris in place. Recover oil using appropriate sorbents. Approved cleaning methods for large oiled debris are presented below:

Method	Handling	RRT Approval	Special Permits
Scraping	No	No	No
Wiping	No	No	No
Hotsie	No	No	No

The following options require special approval

Method	Handling	RRT Approval	Special Permits
SWAs	No	Yes	No
Burning	Yes	Yes	Yes

For questions regarding environmental issues, contact Lyle Trumbull at (610) 710-1919.

[1] Non-living oiled debris

Memorandum

To: **Operations Section Chief**

From: **EU**

Subject: **Protocol for handling dead wildlife carcasses found during shoreline cleanup.**

As workcrews are cleaning oiled-shorelines and structures or removing oiled-debris they are likely to encounter dead oiled wildlife. Please handle wildlife carcasses as follows.

A. Dead Oiled Wildlife

All dead oiled wildlife (birds, fish, mammals, turtles) shall be bagged and held for the Wildlife Recovery Unit, and not disposed with other oiled material.

1. **Carefully approach the carcass and confirm that it is dead. If the animal is not dead do not attempt to capture it – contact the EU Leader at (610) 710-1919 immediately for instructions.**

2. **If the animal is confirmed to be dead, place the carcass into a plastic bag – DO NOT mix carcasses together in the same bag – ONE carcass per bag.**

3. **Tie the bag closed and give it to the crew leader.**

4. **The crew leader shall immediately notify the EU Leader at (610) 710-1919 to have the carcasses picked up – do not leave bagged oiled carcasses unattended in the field.**

B. Live Oiled Wildlife

Clean up crews shall not attempt to capture live wildlife.

1. **Live oiled wildlife seen during clean up efforts should be reported by the crew leader to the EU Leader Lyle Trumbull and relay the location, time, number and types of oiled wildlife seen. If Lyle Trumbull is unavailable call Tri-state Bird Rescue at 302-737-9543.**

If you have any questions, please contact me at (610) 710-1919.

ICS 202 - General Response Objectives

Incident:	MT Athos I	**Prepared By:**	Planning Section **at** 4/16/2005 13:00
Period:	Period 32 (4/19/2005 06:00 - 5/3/2005 06:00)	**Version Name:**	Unified Command Objectives

Overall and Tactical Objectives

	Assigned To	Status
Conduct operations in accordance with the site safety plan.		
Continue to clean waterfront facilities per facility priority list.		
Decon recreational vessels		
Continue aggressive shoreline cleanup and disposal operation.		
Continue to assess the location and extent of oil impact.		
Monitor areas of special interest for possible submerged oil threat (water intake consortium)		
Collect, recover, and rehabilitate injured wildlife.		
Continue to keep stake holders and public informed.		
Begin process of identifying areas where there is no further action required. These areas will be areas where the clean up is complete. Some areas will be identified for final "Sign Off"		
Unified Command Emphasis:		
• Safety First

Assignments

*** General cleanup notes:
*** Remove any abandoned boom or snare
*** Collect released oil in snare for all hotsie activities.
*** Do not strip bark from tree during hotsie activities
*** Refer to cleanup endpoints and methods sheet for guidance on how clean is clean.
*** Call the Environmental Unit (Lyle Trumbull, 610-710-1919) for cleanup endpoint guidance or if your crew is close to completing an area.
*** For cleaning bark-trees: use cold water pressure wash.

- PA1A:
  Complete by 4/30/2005.
  Continue work in Penn Treaty Park, Penns Park North and South.
  Hotsie oil band on piers;
  Oil may be stranded on rocky areas between bays - Hotsie if contaminated
  Remove oiled debris.

- PA2A:
  Complete by 5/5/2005.
  Pier 3 & 5:
  Continue clean up of marina. Maximize use of Pier 24, Lagoon, and open births to facilitate completion.
  S side of pier – hotsie structure as needed.

  Moshulu Dock:
  Complete by 4/24/2005.
  Hotsie land side and south side seawall and pilings.

  Chart House Restaurant:
  Anticipate crew mob. on 5/3/2005. Complete by 5/18/2005.
  Hotsie oiled riprap in front of Chart House.
  Hotsie oiled band on wall on s side of restaurant.
  Secure Ops by 1530 dailey, no ops on Sunday.

  Bay N of Heliport:
  Complete by 5/15/2005.
  Hotsie North and South side of heliport;
  Special attention to possible pavement on N corer of bay north of heliport. Manual removal as necessary;
  Hotsie oiled band along pier 40 seawall.

- PA2B:
  Complete by 5/15/2005.
  Hotsie oil band on piers;
  Oil stranded on rocky areas between bays
  Hotsie if contaminated
  Remove oiled debris.

- PA2C:
  Wal Mart and Home Depot:
  No current operations - anticipate mob. in of resources from Pier 3 & 5 on 5/7/2005. Complete by 5/21/2005.
  Home Depot: hotsie oiled band especially north walls of bays;
  Walmart-Hotsie oiled band around entire pier as needed.

- PA2D:
  No current operations - anticipate mob. in of resources from Pier 3 & 5 on 5/7/2005. Complete by 5/21/2005.

© 1997-2005 dbSoft, Inc.

- PA2E:
  No current operations - anticipate mob. in of resources from Chart House on 5/3/2005. Complete by 5/25/2005.

- PA2F:
  No current operations - anticipate mob. in of resources from Chart House on 5/3/2005. Complete by 5/25/2005.

Special Equipment / Supplies Needed for Assignment

Additional equipment will be made available from staging as per operational needs.

All unused equipment should be immediately returned to Staging 1/Lagoon for redeployment.

Special Environmental Considerations

Due to the wildlife concerns, operational activities are prohibited in the following locations: all of Monds Island, the NJ side of Petty Island. a 500ft. restricted zone has been established surrounding these areas. No on-water operations are permitted in this zone without first notifying EU.

Special Site-Specific Safety Considerations

Review Site Safety Plan (Contractors) With Special Attention To PPE, Slips, and Trips & Falls. All Personnel Are Required To Follow Decon Procedures In Site Safety Plan.

All on-water operations should be guided by the 3/21/05 "Temporary Safety Zone" established by the COTP-Philadelphia requiring minimal wake in the response area. Special safety precautions should be exercised as hot weather approaches. Response personnel should be alert to their surroundings and aware of the safety of those working with them.

Additional Information

Report situation status and resource changes each day at 1700, call 267-765-3447 or fax 215-923-4476. This is critical to allow us to plan properly and ensure you will have the resources you need to do your job tomorrow.

Fax all equipment and personnel Check-In sheets to 215-923-4476 with an attention line to "Resource Unit"

Please review attached protocol for handling oiled wildlife.

Wake incidents should be reported to the Waterways Management Branch at 215-271-4889 (7:30am to 4:00pm) or 215-271-4807 (After 4:00pm).

Ensure that all your equipment is barcoded, and that the Resource Unit has a list of your barcoded equipment.

Assignments

*** General cleanup notes:
*** Remove any abandoned boom or snare
*** Collect released oil in snare for all hotsie activities.
*** Do not strip bark from tree during hotsie activities
*** Refer to cleanup endpoints and methods sheet for guidance on how clean is clean.
*** Call the Environmental Unit (Lyle Trumbull, 610-710-1919) for cleanup endpoint guidance or if your crew is close to completing an area.
*** For cleaning bark-trees: use cold water pressure wash.

- PA3A:
  Kavearner Shipyard:
  Continue work in DD # 5. Complete by 4/30/2005.

- PA3B:
  Navy Yard:
  Navy Yard (BTWN Pier 5 and DD # 3):
  Navy Yard:
  Continue Hotsie work of seawall and piers north side of pier 5. Complete by 4/24/2005.

- PA3C:
  Navy Yard Seawall:
  Continue work at ferry landing to Admiral Row cobble wall. Complete by 4/20/2005.

- PA3D:
  Navy Yard Seawall:
  Continue seawall Hotsie work. Complete by 4/24/2005.

- PA3E:
  Turtle Cove II - Vane Bros and Coal Dock Coves:
  Clean beach areas by 4/30/2005, then continue with dock and seawall. Consult with EU on turtle migration prior to begining seawalls.

MAT Data:
Hotsie riprap and gabeon on north shore of Navy Yard bridge.
Hotsie rock wall entrance to basin and river as needed to remove crusty oil.
Hotsie piers as needed to remove crusty oil.
Hostie docks as needed to remove crusty oil.

Special Equipment / Supplies Needed for Assignment

Additional equipment will be made available from staging as per operational needs.

All unused equipment should be immediately returned to Staging 1/Lagoon for redeployment.

Special Environmental Considerations

Due to the wildlife concerns, operational activities are prohibited in the following locations: all of Monds Island, the NJ side of Petty Island. a 500ft. restricted zone has been established surrounding these areas. No on-water operations are permitted in this zone without first notifying EU.

ICS 204 - Assignment List

Incident:	MT Athos I	**Branch:**	
Period:	Period 32 (4/19/2005 06:00 - 5/3/2005 06:00)	**Division/Group:**	Delaware / Pennsylvania
Prepared By Signature:		**Task Force:**	Task Force #2
Approved By Signature:			

Special Site-Specific Safety Considerations

Review Site Safety Plan (Contractors) With Special Attention To PPE, Slips, and Trips & Falls. All Personnel Are Required To Follow Decon Procedures In Site Safety Plan.

All on-water operations should be guided by the 3/21/05 "Temporary Safety Zone" established by the COTP-Philadelphia requiring minimal wake in the response area. Special safety precautions should be exercised as hot weather approaches. Response personnel should be alert to their surroundings and aware of the safety of those working with them.

Additional Information

Report situation status and resource changes each day at 1700, call 267-765-3447 or fax 215-923-4476. This is critical to allow us to plan properly and ensure you will have the resources you need to do your job tomorrow.

Fax all equipment and personnel Check-In sheets to 215-923-4476 with an attention line to "Resource Unit"

Please review attached protocol for handling oiled wildlife.

Wake incidents should be reported to the Waterways Management Branch at 215-271-4889 (7:30am to 4:00pm) or 215-271-4807 (After 4:00pm).

Ensure that all your equipment is barcoded, and that the Resource Unit has a list of your barcoded equipment.

ICS 204 - Assignment List

Incident:	MT Athos I	**Branch:**	
Period:	Period 32 (4/19/2005 06:00 - 5/3/2005 06:00)	**Division/Group:**	Delaware / Pennsylvania
Prepared By Signature:		**Task Force:**	Task Force #4
Approved By Signature:			

Assignments

*** General cleanup notes:
*** Remove any abandoned boom or snare
*** Collect released oil in snare for all hotsie activities.
*** Do not strip bark from tree during hotsie activities
*** Refer to cleanup endpoints and methods sheet for guidance on how clean is clean.
*** Call the Environmental Unit (Lyle Trumbull, 610-710-1919) for cleanup endpoint guidance or if your crew is close to completing an area.
*** For cleaning bark-trees: use cold water pressure wash.

- PA-6-A:
Continue work at Boeing & Foamex. Complete by 4/24/2005.
Complete Penn Terminal & PA 6-B1 by 4/24/2005.
Hotsie oil coat on concrete and steel seawalls from39.50.984, 75.20.481 up to 39.51.111, 75.20.097. (2) Manually remove
oiled debris and hotsie oil coat on riprap from 39.51.111, 75.20.087 to 39.51.167, 75.19.917. (3) check cove for band on riprap – hotsie if necessary. (4) Hotsie seawall at power plant 39.51.316, 75.19.523, (5) hotsie seawall, wire-covered riprap
at Boeing facility at 39.51.462, 75.19.057. Use caution in this area.
Hotsie riprap and large debris on Fomex Beach. Manually remove small oiled debris and pavement @ 39.51.220 x 75.20.056, and asphalt pavement in area. Cut oiled weeds from top of pilings where oiled.
Hotsie riprap inside lagoon north of Fomex beach. Remove oiled debris.

- PA6B:
Continue progress in old shipyard. Complete by 4/24/2005.
Complete remainder of PA 6-B by 5/1/2005.
Hotsie seawalls and riprap from Ridley creek to Com Barry Bridge.
Hotsie seawalls and riprap at Degussa facility (39.50.159, 75.22.087) and Chester Water dept. (39.50.243, 75.21.905).
Use hand shovels to remove asphalt pavement on beach near water dept. (2) hotsie seawalls upstream of Chester Creek
from 39.50.461, 75.21.495 (near warehouses). (3) hotsie seawalls on upstream sides of shipyard slips. Note: pavement continues subsurface throughout the area.
From CMdr Barry Bridge to Pier:
Prune live oiled vegetation. Hotsie or scrape large woody vegetation. Spot hotsie riprap. Remove small oiled debris.

- PA6:
South of Banacor
There is a portion of the shoreline with dilapidated pier, rocks, trees and shrubs, with oiled line apparent for about 25'.
Hotsie affected areas and remove debris.
Cut shurbs at oiled line as needed. Area located within 1500' of Banacor.
North of this, remove pompom and woody debris.
Further north, remove sorbent boom tangled in wood pylons.

- Remob to PA-3 by 4/27/2005.

Special Equipment / Supplies Needed for Assignment

Additional equipment will be made available from staging as per operational needs.

All unused equipment should be immediately returned to Staging 1/Lagoon for redeployment.

Special Environmental Considerations

Due to the wildlife concerns, operational activities are prohibited in the following locations: all of Monds Island, the NJ side of Petty Island. a 500ft. restricted zone has been established surrounding these areas. No on-water operations are permitted in this zone without first notifying EU.

ICS 204 - Assignment List

Incident:	MT Athos I	**Branch:**	
Period:	Period 32 (4/19/2005 06:00 - 5/3/2005 06:00)	**Division/Group:**	Delaware / Pennsylvania
Prepared By Signature:		**Task Force:**	Task Force #4
Approved By Signature:			

Special Site-Specific Safety Considerations

Review Site Safety Plan (Contractors) With Special Attention To PPE, Slips, and Trips & Falls. All Personnel Are Required To Follow Decon Procedures In Site Safety Plan.

All on-water operations should be guided by the 3/21/05 "Temporary Safety Zone" established by the COTP-Philadelphia requiring minimal wake in the response area. Special safety precautions should be exercised as hot weather approaches. Response personnel should be alert to their surroundings and aware of the safety of those working with them.

Additional Information

Report situation status and resource changes each day at 1700, call 267-765-3447 or fax 215-923-4476. This is critical to allow us to plan properly and ensure you will have the resources you need to do your job tomorrow.

Fax all equipment and personnel Check-In sheets to 215-923-4476 with an attention line to "Resource Unit"

Please review attached protocol for handling oiled wildlife.

Wake incidents should be reported to the Waterways Management Branch at 215-271-4889 (7:30am to 4:00pm) or 215-271-4807 (After 4:00pm).

Ensure that all your equipment is barcoded, and that the Resource Unit has a list of your barcoded equipment.

ICS 204 - Assignment List

Incident:	MT Athos I	**Branch:**	
Period:	Period 32 (4/19/2005 06:00 - 5/3/2005 06:00)	**Division/Group:**	New Jersey
Prepared By Signature:		**Task Force:**	Task Force #7
Approved By Signature:			

Assignments

*** General cleanup notes:
*** Remove any abandoned boom or snare
*** Collect released oil in snare for all hotsie activities.
*** Do not strip bark from tree during hotsie activities
*** Refer to cleanup endpoints and methods sheet for guidance on how clean is clean.
*** Call the Environmental Unit (Lyle Trumbull, 610-710-1919) for cleanup endpoint guidance or if your crew is close to completing an area.
*** For cleaning bark-trees: use cold water pressure wash.

Continue working with assigned complement in NJ 5 A-G.
Continue work in NJ 3 J-L.

- NJ3A-F:
  Complete by 4/20/2005
  Hotsie or scrape oiled woody debris greater than 6 inches in diameter
  Remove oiled woody debris less than 6 inches in diameter
  Mechanical raking /or manual turn over of cobble or small boulders - high volume water flush or hotsie
  Remove buried oil/tar mats

- NJ3G:
  Complete by 4/20/2005
  South to Ferry Dock
    Hotsie or scrape oiled woody debris greater than 6 inches in diameter
    Remove oiled woody debris less than 6 inches in diameter
    Manual removal utilizing mechanical hauling of fine gravel and pebbles
    Manual or mechanical removal of oil coated cobble and mechanical hauling
    Mechanical raking /or manual turn over of cobble or small boulders - high volume water flush or hotsie
    Hotsie rock around West Deptford Boat Ramp
    Remove buried oil just downstream of W Deptford Boat Ramp (1-2' below surface)
    Cold water pressure wash all oiled live trees

- Ferry Dock to NJ3H :
  Complete by 5/3/2005.
  Sand/small cobble beach
  Remove any tar mats
  Mechanical removal oil coated pebbles and cobble
  Hotsie or scrape oiled woody debris greater than 6 inches in diameter
  Remove oiled woody debris less than 6 inches in diameter
  Manual removal of oily debris as necessary
  Cold water pressure wash all oiled live trees
  Manual removal of tar mats
  Manually locate and identify all buried oil areas and manual removal with the use of machinery
  Note: High public use

- NJ3H:
  Complete by 5/10/2005.
  Remove any tar mats
  Hotsie or scrape oiled woody debris greater than 6 inches in diameter
  Remove oiled woody debris less than 6 inches in diameter
  Small cobble, manual removal (possible mechanized hauling)
  National Park down to Woodbury creek
  Coarse grain sandy beach /riprap
  Hotsie riprap/consider high volume warm water
  Move cobble, remove tar, remove tar mats, hotsy cobble

© 1997-2005 dbSoft, Inc.

Manually remove small cobble - use mechanized hauling
Note: High public use area

- NJ3I:
Hotsie or scrape oiled woody debris greater than 6 inches in diameter
Remove oiled woody debris less than 6 inches in diameter
Cold water pressure wash all oiled live trees

- NJ3J:
Continue oiled phragmites removal adjacent to Riverwinds in NJ 3-J. Complete by 4/8/2005.
Cut oiled phragmites at oiled line.
Removed oiled mat from southern side cover
Remove oiled (drag) woody debris - drag from high public area and hotsie
Hotsie or scrape oiled woody debris greater than 6 inches in diameter
Remove oiled woody debris less than 6 inches in diameter
Move cobble, remove tar, remove tar mats, hotsie cobble
Cold water pressure wash all oiled live trees
Note: High public use area

- NJ3K:
Complete by 4/23/2005.
Manual removal of oiled gravel/patties
Cut non-woody vegetation/branches at oiled line.
Cold-water pressure wash oiled live trees
Hotsie or scrape oiled woody debris greater than 6 inches in diameter
Remove oiled woody debris less than 6 inches in diameter
Hotsie boulders

Special Instructions for Division / Group

- NJ3L:
Complete by 4/23/2005.
Citgo Beach
Sand cobble /boulders
Move cobble, remove tar mats/asphalt; hotsie cobble
Hotsie or scrape oiled woody debris greater than 6 inches in diameter
Remove oiled woody

- Tanner Island:
Complete by 4/27/2005.
Remove pavement in mid-lower intertidal zone - partially buried under gravel.
39° 52.508' N, 75° 11.589' W (approx. 50' x 20') - hand removal.
Scrape oiled roots on northwest side.
Check lower intertidal zone for buried pavement during cleanup.

- Chester Island:
Complete by 4/27/2005.
Some oiled phrag, a couple pattie areas, and some oiled trash and woody debris on PA half of island.
Cut oiled phrag and scrape oiled phrag hummocks at 2 spots:
a) 39° 50.431' N, 75° 20.207' W
b) 39° 50.179' N, 75° 20.795'
Remove small pavement spot (1 bag worth)
39° 50.443' N, 75° 20.329'
Maintain debris, patties; scrape large woody debris as needed.

Special Equipment / Supplies Needed for Assignment

All unused equipment should be immediately returned to Staging for redeployment.

ICS 204 - Assignment List

Incident:	MT Athos I	**Branch:**	
Period:	Period 32 (4/19/2005 06:00 - 5/3/2005 06:00)	**Division/Group:**	New Jersey
Prepared By Signature:		**Task Force:**	Task Force #7
Approved By Signature:			

Special Environmental Considerations

Due to the wildlife concerns, operational activities are prohibited in the following locations: all of Monds Island, the NJ side of Petty Island. a 500ft. restricted zone has been established surrounding these areas. No on-water operations are permitted in this zone without first notifying EU.

Special Site-Specific Safety Considerations

Review Site Safety Plan (Contractors) With Special Attention To PPE, Slips, and Trips & Falls. All Personnel Are Required To Follow Decon Procedures In Site Safety Plan.

All on-water operations should be guided by the 3/21/05 "Temporary Safety Zone" established by the COTP-Philadelphia requiring minimal wake in the response area. Special safety precautions should be exercised as hot weather approaches. Response personnel should be alert to their surroundings and aware of the safety of those working with them.

Additional Information

Report situation status and resource changes each day at 1700, call 267-765-3447 or fax 215-923-4476. This is critical to allow us to plan properly and ensure you will have the resources you need to do your job tomorrow.

Fax all equipment and personnel Check-In sheets to 215-923-4476 with an attention line to "Resource Unit"

Please review attached protocol for handling oiled wildlife.

Wake incidents should be reported to the Waterways Management Branch at 215-271-4889 (7:30am to 4:00pm) or 215-271-4807 (After 4:00pm).

Ensure that all your equipment is barcoded, and that the Resource Unit has a list of your barcoded equipment.

Assignments

*** General cleanup notes:
*** Remove any abandoned boom or snare
*** Collect released oil in snare for all hotsie activities.
*** Do not strip bark from tree during hotsie activities
*** Refer to cleanup endpoints and methods sheet for guidance on how clean is clean.
*** Call the Environmental Unit (Lyle Trumbull, 610-710-1919) for cleanup endpoint guidance or if your crew is close to completing an area.
*** For cleaning bark-trees: use cold water pressure wash.

Consolidate work into PA 4-F - PA 4-H.
Continue ops with current force strength.

- PA-4G:
  Complete PA 4-G by 4/23/2005
  Downstream of Sunoco (Ft. Mifflin) to where rip rap ends
  Rip rap/large cobble beach/pylons
  Hotsie rip rap as needed
  Hotsie or scrape old wooden pier supports
  Hotsie or scrape oiled woody debris greater than 6 inches in diameter
  Remove oiled woody debris less than 6 inches in diameter
  Cut oiled branches from live tree at oiled line.
  Manually remove matting/pavement
  Remove asphalt and heavy oiled sediment from around and beneath cobbles; hotsie cobbles;
  PWCW or scrape the trunks and roots of oiled live trees throughout this segment
  (notes: canal behind beach feeds moat; do not remove snare and sausage boom here)
  Refer to general notes below

- PA-4H:
  Complete PA 4 F&H by 5/5/2005
  Area from end of rip rap downstream to fire department building/boat ramp
  Sandy beach/old wooden pilings/concrete piers
  Hotsie concrete piers
  Hotsie or scrape old wooden pier supports
  Hotsie or scrape oiled woody debris greater than 6 inches in diameter
  Remove oiled woody debris less than 6 inches in diameter
  Remove asphalt and heavy oiled sediment from around and beneath cobbles; hotsie cobbles;
  Cut oiled branches from live tree at oiled line.
  Pressure wash or scrape the trunks and roots of oiled live trees throughout this segment
  Refer to general notes below

- PA-4J1:
  Complete by 5/15/2005.
  Large cove just south of Sunoco Hog Island
  Sand/cobble beach/old seawall/pylons
  Hotsie or scrape old wooden piers and bulkheads
  Hotsie rip rap as needed
  Hotsie or scrape oiled woody debris greater than 6 inches in diameter
  Remove oiled woody debris less than 6 inches in diameter
  Remove asphalt mats on beach
  Refer to general notes below

© 1997-2005 dbSoft, Inc.

Incident:	MT Athos I	**Branch:**	
Period:	Period 32 (4/19/2005 06:00 - 5/3/2005 06:00)	**Division/Group:**	Delaware / Pennsylvania
Prepared By Signature:		**Task Force:**	Task Force #8
Approved By Signature:			

- PA-4J2:
  Complete by 5/15/2005.
  Area from cove downstream to the seawall
  Sand beach/sand flat
    Hotsie or scrape oiled woody debris greater than 6 inches in diameter
    Remove oiled woody debris less than 6 inches in diameter
    Hotsie rock piles and redistribute rocks
    Manually remove tar mats and small tar patties
    (notes: be careful not to drive oil into sediment, place black matting underneath the debris and rocks during large hotsie operations such as piles of rocks or woody debris).
    Refer to general notes below

Special Instructions for Division / Group

- PA-4J3:
  Rock wall/small cove
  Remove small tar patties from sand flat
    Pressure wash live tree roots or trunk - cold water
    Hotsie upstream quarter of wall, focus on cracks to mobilize and collect released oil. (try land and water sides)
    Hotsie or scrape oiled woody debris greater than 6 inches in diameter
    Remove oiled woody debris less than 6 inches in diameter
    Monitor rock wall for seepage, place snare to collect floating oil if observed
    Refer to general notes below

- PA-4J4:
  Western end of rock wall downstream to the border or PA-4/PA-5
  Rip rap/sandy beach
    Hotsie rip rap as needed
    Remove patties from sand flat
    Pressure wash live tree roots – cold wash
    Hotsie or scrape oiled woody debris

Special Equipment / Supplies Needed for Assignment

All unused equipment should be immediately returned to Staging for redeployment.

Special Environmental Considerations

Due to the wildlife concerns, operational activities are prohibited in the following locations: all of Monds Island, the NJ side of Petty Island. a 500ft. restricted zone has been established surrounding these areas. No on-water operations are permitted in this zone without first notifying EU.

Assignments

*** General cleanup notes:
*** Remove any abandoned boom or snare
*** Collect released oil in snare for all hotsie activities.
*** Do not strip bark from tree during hotsie activities
*** Refer to cleanup endpoints and methods sheet for guidance on how clean is clean.
*** Call the Environmental Unit (Lyle Trumbull, 610-710-1919) for cleanup endpoint guidance or if your crew is close to completing an area.
*** For cleaning bark-trees: use cold water pressure wash.

Consolidate work into PA4-A - PA4-E.
Complete work in PA 4-E by 4/28/2005 with addition of hot water flush.

- PA-4A:
  Complete by 4/30/2005.
  I95 Bridge on Schuylkill River south to start of wooden bulkhead
  Rip rap/mudflat/small cove at southern end of zone
  Hotsie oiled riprap throughout the entire zone
  Cut the branches from live oiled vegetation at oiled line.
  High Pressure Cold Water wash (HPCW) the trunks and roots of oiled live trees throughout this segment
  (notes: hotsie from land – 50-75' of mudflats @ low tide, access difficult – two levels of reeds and steep hill to rip rap, se general notes below)

- PA-4C:
  Mouth of the Schuylkill River to 500 feet downstream

- PA- 4D:
  Complete work in PA 4-D by 5/12/2005.
  Provide crews for debris sweeps of PA 4 A&C as available.
  Shoreline from PA-4C to the old Army Corps of Engineers (ACOE) Dock
  Hotsie oiled riprap throughout the entire zone
  Cut the branches from live oiled vegetation at oiled line.
  Pressure wash or scrape the trunks and roots of oiled live trees throughout this segment
  (notes: access to area is difficult but not as difficult as PA-4A or PA-4B)
  Old ACOE Dock and Breakwater
  Hotsie old dock and breakwater
  Cut the branches from live oiled vegetation at oiled line.
  Old ACOE dock downstream to new ACOE dock
  Hotsie rip rap as needed
  Complete hotsie of ACOE dock from barge (dock should be complete)
  Cut the branches from live oiled vegetation at oiled line.
  (notes: access to the upstream ½ of this segment is difficult)

  Old Fort Mifflin Dock
  Hotsie dock and remove debris/tar patties from cove

Special Equipment / Supplies Needed for Assignment

All unused equipment should be immediately returned to Staging for redeployment.

ICS 204 - Assignment List

Incident:	MT Athos I	**Branch:**	
Period:	Period 32 (4/19/2005 06:00 - 5/3/2005 06:00)	**Division/Group:**	Delaware / Pennsylvania
Prepared By Signature:		**Task Force:**	Task Force #9
Approved By Signature:			

Special Environmental Considerations

Due to the wildlife concerns, operational activities are prohibited in the following locations: all of Monds Island, the NJ side of Petty Island. a 500ft. restricted zone has been established surrounding these areas. No on-water operations are permitted in this zone without first notifying EU.

Special Site-Specific Safety Considerations

Review Site Safety Plan (Contractors) With Special Attention To PPE, Slips, and Trips & Falls. All Personnel Are Required To Follow Decon Procedures In Site Safety Plan.

All on-water operations should be guided by the 3/21/05 "Temporary Safety Zone" established by the COTP-Philadelphia requiring minimal wake in the response area. Special safety precautions should be exercised as hot weather approaches. Response personnel should be alert to their surroundings and aware of the safety of those working with them.

Additional Information

Report situation status and resource changes each day at 1700, call 267-765-3447 or fax 215-923-4476. This is critical to allow us to plan properly and ensure you will have the resources you need to do your job tomorrow.

Fax all equipment and personnel Check-In sheets to 215-923-4476 with an attention line to "Resource Unit"

Please review attached protocol for handling oiled wildlife.

Wake incidents should be reported to the Waterways Management Branch at 215-271-4889 (7:30am to 4:00pm) or 215-271-4807 (After 4:00pm).

Ensure that all your equipment is barcoded, and that the Resource Unit has a list of your barcoded equipment.

Task Force #10	Manpower: Responder	Spill Tech	50 each	
Task Force #10	Pressure Washers / Wash	Hotsie	20 each	
Task Force #10	Pumps	Pump	10 each	

Assignments

*** General cleanup notes:
*** Remove any abandoned boom or snare
*** Collect released oil in snare for all hotsie activities.
*** Do not strip bark from tree during hotsie activities
*** Refer to cleanup endpoints and methods sheet for guidance on how clean is clean.
*** Call the Environmental Unit (Lyle Trumbull, 610-710-1919) for cleanup endpoint guidance or if your crew is close to completing an area.
*** For cleaning bark-trees: use cold water pressure wash.

- PA-8:
  Complete PA 8 by 5/3/2005
  Cut oiled phragmites and branches at oiled line.
  Hotsie riprap, docks, and seawalls

- PA-8C:
  Remove tar balls and oiled debris

- PA-8E:
  Downstream cove: Hotsie riprap
  Remove tar patties and oiled debris
  Cut oiled phragmites at oiled line.

- PA-8F:
  Sunoco Marcus Hook - Hotsie pier and mooring platforms to remove crusty oil residue.

- DE-1:
  Complete by 5/3/2005.
  Hotsie riprap, docks, and seawalls.
  Remove tarballs and oiled debris.

- DE-2:
  Complete by 5/3/2005.
  Hotsie riprap, docks, and seawalls.
  Remove tarballs and oiled debris.

Assignments

Decontaminate response equipment.
Continue to clean recreational boats in-place, at pier 24, or at the Lagoon.
Provide on site mechanic service for field equipment support.

Special Site-Specific Safety Considerations

Review Site Safety Plan(Contractors) With Special Attention To PPE, Slips, and Trips & Falls. All Personnel Are Required To Follow Decon Procedures In Site Safety Plan.

All on-water operations should be guided by the 3/21/05 "Temporary Safety Zone" established by the COTP-Philadelphia requiring minimal wake in the response area. Special safety precautions should be exercised as hot weather approaches. Response personnel should be alert to their surroundings and aware of the safety of those working with them.

Additional Information

Report situation status and resource changes each day at 1700, call 267-765-3447 or fax 215-923-4476. This is critical to allow us to plan properly and ensure you will have the resources you need to do your job tomorrow.

Fax all equipment and personnel Check-In sheets to 215-923-4476 with an attention line to "Resource Unit"

Please review attached protocol for handling oiled wildlife.

Wake incidents should be reported to the Waterways Management Branch at 215-271-4889 (7:30am to 4:00pm) or 215-271-4807 (After 4:00pm).

Ensure that all your equipment is barcoded, and that the Resource Unit has a list of your barcoded equipment.

ICS 204 - Assignment List

Incident:	MT Athos I	**Branch:**	Method Assessment Team
Period:	Period 32 (4/19/2005 06:00 - 5/3/2005 06:00)	**Division/Group:**	
Prepared By Signature:		**Task Force:**	
Approved By Signature:			

Operations Personnel

Title	Person	Radio	Phone	Pager
Planning Section Chief	C. Bukosky		609-510-7719	
Environmental Unit	L. Trumbull		610-710-1919	
Safety Officer	E. Doyle/A. Gresham		302-293-8959/8960	

Assignments

MAT will assess and compile cleanup data and identify areas requiring additional cleanup resources. Conduct shoreline surveys according to MAT plan. Report information to Planning for coordination of response resources.

Description of Work

On standy to assess newly reported areas requiring cleanup resources. Compile list of areas worked and conduct targeted site visit to assess completeness.

Location of Work

Teams will be deployed by EUL as necessary.

Work Assignment Special Instructions

All reports will reference Areas as noted on attached maps.

Special Equipment / Supplies Needed for Assignment

Additional equipment will be made available from staging as per operational needs.

All unused equipment should be immediately returned to Staging for redeployment.

Special Environmental Considerations

Due to the wildlife concerns, operational activities are prohibited in the following locations: all of Monds Island, the NJ side of Petty Island. a 500ft. restricted zone has been established surrounding these areas. No on-water operations are permitted in this zone without first notifying EU.

Special Site-Specific Safety Considerations

Review Site Safety Plan(Contractors) With Special Attention To PPE, Slips, and Trips & Falls. All Personnel Are Required To Follow Decon Procedures In Site Safety Plan.

All on-water operations should be guided by the 3/21/05 "Temporary Safety Zone" established by the COTP-Philadelphia requiring minimal wake in the response area. Special safety precautions should be exercised as hot weather approaches. Response personnel should be alert to their surroundings and aware of the safety of those working with them.

Additional Information

Report situation status and resource changes each day at 1700, call 267-765-3447 or fax 215-923-4476. This is critical to allow us to plan properly and ensure you will have the resources you need to do your job tomorrow.

Fax all equipment and personnel Check-In sheets to 215-923-4476 with an attention line to "Resource Unit"

Please review attached protocol for handling oiled wildlife.

Wake incidents should be reported to the Waterways Management Branch at 215-271-4889 (7:30am to 4:00pm) or 215-271-4807 (After 4:00pm).

Ensure that all your equipment is barcoded, and that the Resource Unit has a list of your barcoded equipment.

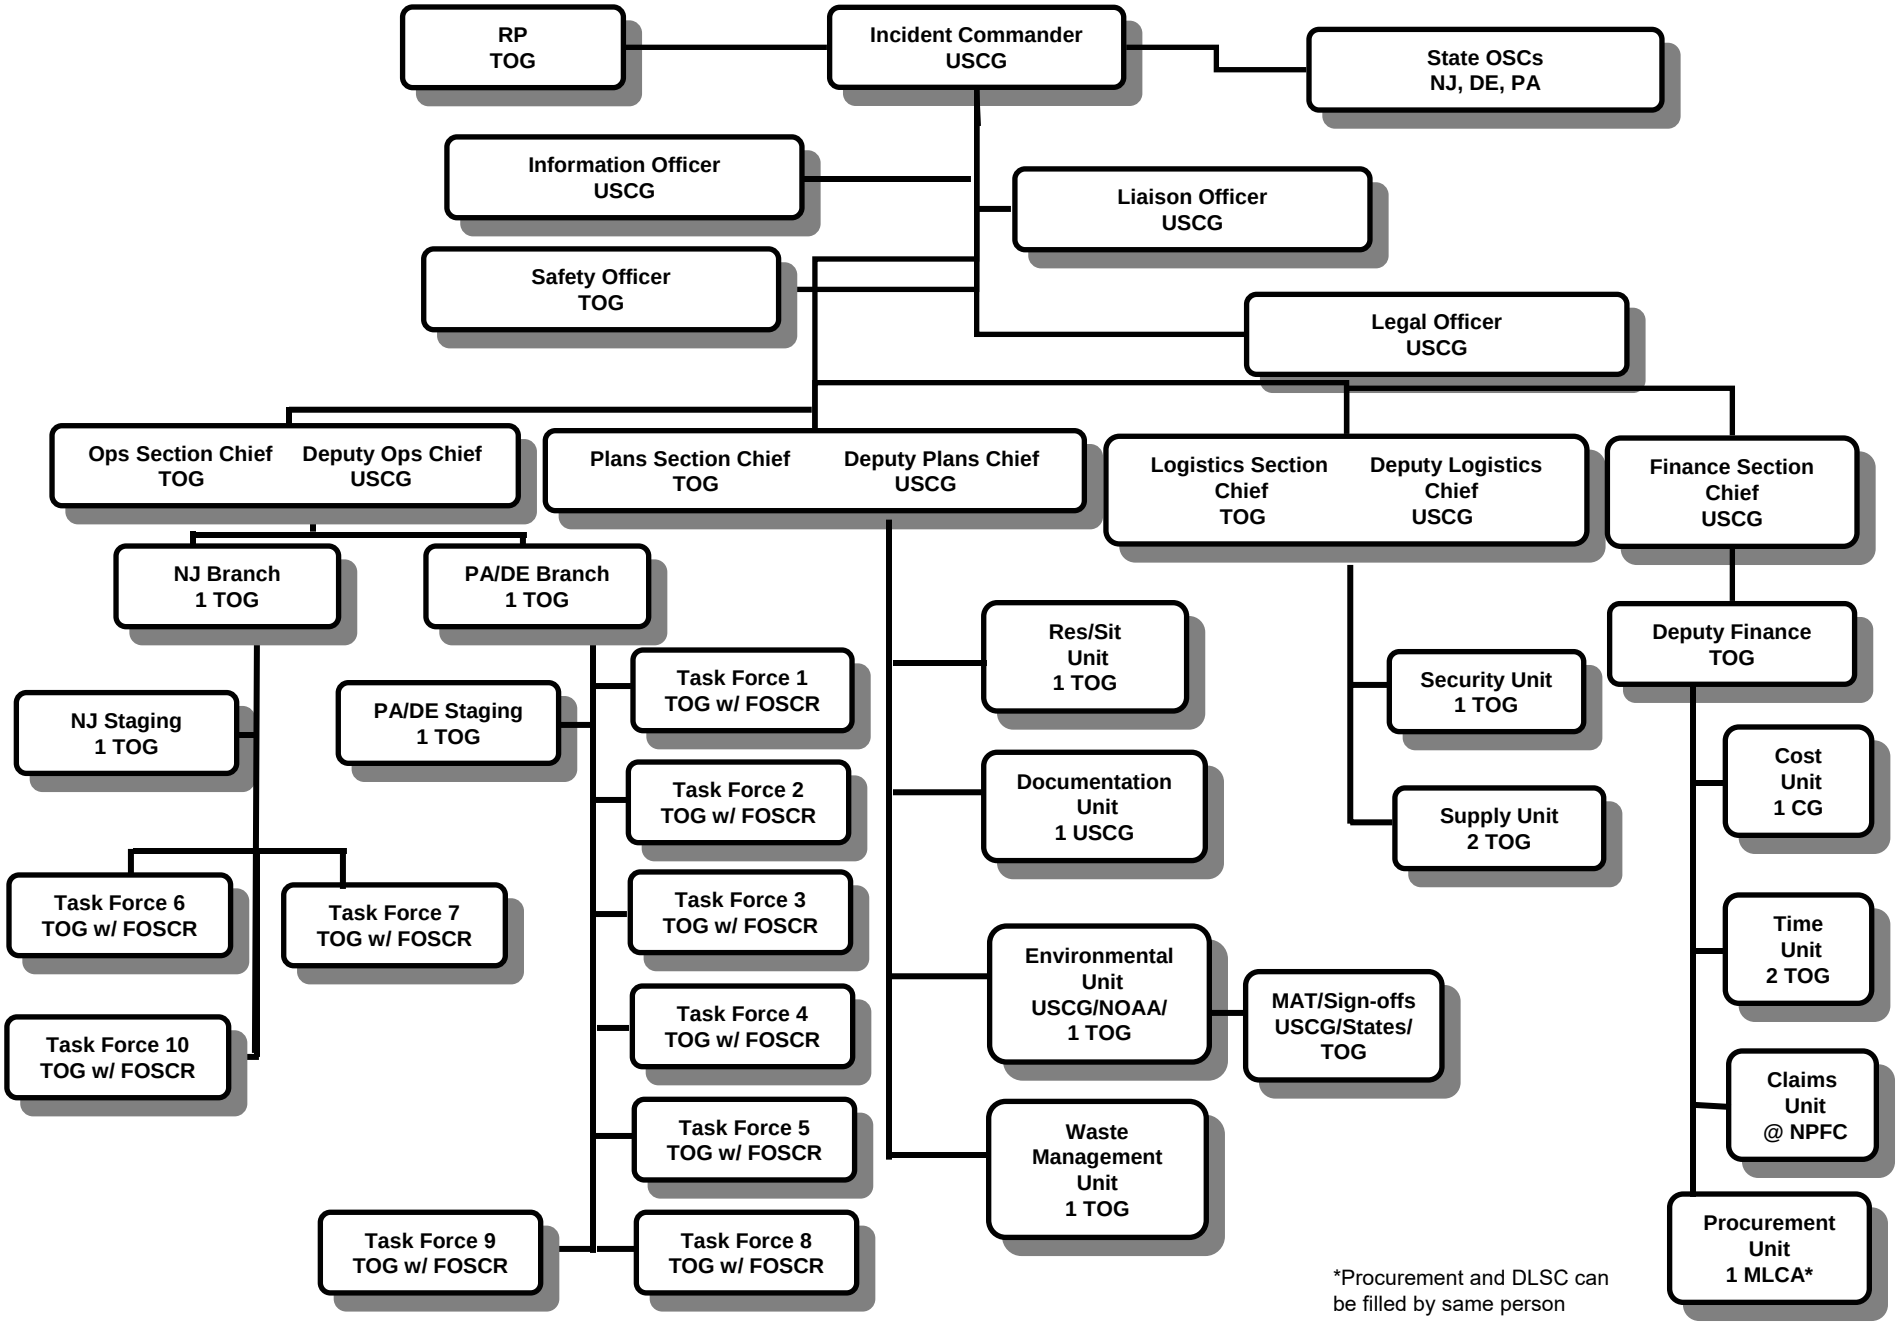
M/V ATHOS I - ICS-207 FOR FEDERALIZED RESPONSE – 4/19/05 - 5/3/05



*Procurement and DLSC can be filled by same person

Incident Name: M/T ATHOS I	Location: Philadelphia, PA

Health & Safety Message for IAP for Period 32 (4/19/05 thru 5/3/05)

TO: ALL PERSONNEL

- **All safety rules are to be followed.**
- **Look out for your fellow responders.**
- **Use Common Sense.**
- **Do Not Take Chances.**
- **If unsafe, STOP and talk to your supervisor.**
- **ZERO Injuries is our goal.**

Site Description: On-Water & Beach Cleanup Activities

Potential Hazards: Slippery and uneven surfaces; exposure to weathered oil; cold/heat exposure; slips, trips, and falls; wave and wake concerns while conducting boat operations.

To report Wake Incidents to the Waterway Management Unit of the USCG during the day (0730 to 1600) call 215-271-4889. After hours and on week-ends call 215-271-4807.

GENERAL SAFETY CONCERNS

ADHERENCE TO ALL PPE REQUIREMENTS

Level D (modified)

- **Tyvek-type and /or rain gear (see Protective Clothing Matrix).**
- **Hard hat when overhead hazards exist (also Hogg Island area)**
- **Safety glasses with side shields (ANSI approved) /goggles/face shield**
- **Work shoes**
- **Disposable boots**
- **Chemical resistant gloves**
- **Hearing protection**

NOTE: Eye Protection is NOT OPTIONAL. ANSI Approved Safety Eye Wear with Side Shields is the minimum eye protection requirement for all activities.

Personal Flotation Equipment (PFDs) are required to be worn properly—fully secured—when working on or near the waters edge. UNSECURED PFDs MEANS NO PFDs!

Gloves and sleeve area and boot and pant leg area should be taped to prevent contact with product.

Use of tobacco products of any kind and eating/drinking is restricted to designated areas only and only following proper personal decontamination. Contractors should clearly designate break/rest areas. Otherwise such activity is prohibited.

Special notes:

- **In the event clean up activities involve entry to industrial/commercial facilities, safety and security rules of the facility will apply as long as the safety rules do not contradict the Site Safety Plan.**
- **ALL INJURIES REGARDLESS OF SEVERITY MUST BE REPORTED TO THE OPERATIONS CENTER AND SAFETY IMMEDIATELY AND A INCIDENT REPORT MUST BE FORWARDED TO THE FIELD SAFETY REPRESENTATIVE**
- **ALL PERSONNEL VISITING FIELD WORK AREAS MUST BE WEARING THE APPROPRIATE PPE.**
- **Handling of distressed or dead animals is restricted to regulatory agency personnel. If found, report to the area supervisor who will notify the appropriate person.**

SAFETY FACTS

We have recently experienced 6 serious injuries:

- a hotsy fire and burns to a responder,
- a back injury from a slip on the rocks,
- a foot injury from a slip and being hit with a hotsy spray,
- a hand burn while working on a hotsy,
- a cut to the hand from a sharp object and
- a bee sting.

All of these injuries have one thing in common: **All those injured have been on the job less than three weeks—in most cases only two weeks.**

Two of those injured had been on the response before and just returned within the past two weeks.

To help avoid these injuries in the future we need to make sure all responders—those returning to the project and those new to the project—are being given instructions on safety.

They all need to understand that safety is a basic part of their job. Safety goes hand-in-hand with what they are doing in the field—whether it is operating a boat, using a hotsy, standing a safety watch, or driving a vehicle.

Please reinforce the safety responsibilities all responders have to themselves and to their fellow workers.

SAFETY BULLETIN

As of Sunday, April 17th, and until further notice, mustang suit wear will be optional.

Those presently wearing mustang suits (listed below) now have the option of NOT WEARING Mustang suits:

- Boat Operators and crew members,
- SCAT Teams,
- Boom deployment or boom tending teams

As a note, water temperatures are now ranging from 53-56°. Survival time in water 50° - 60° is between 1-6 hours depending upon certain factors.

Please remember, relaxing the mustang wear policy does not signal the relaxing of the vessel safety rules, especially…

- Operators are still responsible for their boat, crew, passengers and equipment.
- All personnel in a boat as well as those working on, near, or over the water are required to wear PFD's.

Please operate your boats as you have over the last few months: **safely and orderly.**

Please keep your mustang suits until further notice. You will be asked to take all mustang suits to Staging 1 once we are assured the air and water temperatures are at the level where all mustang suit wear will be Completely eliminated, hopefully, within a week or so.

We have not experienced any injuries related to overexpose to cold water or hypothermia in the past three and a half months. Thank you for your past compliance and your continued cooperation with the mustang policy.

WARM WEATHER SAFETY

THE HEAT EQUATION: High Temperature + High Humidity + Physical Work = Heat Illness

When the body is unable to cool itself through sweating, serious heat illnesses may occur. The most severe heat induced illnesses are heat exhaustion and heat stroke. If left untreated, heat exhaustion could progress to heat stroke and possible death.

Heat Exhaustion: What are the symptoms?

- **Headaches**
- **Dizziness or lightheadedness**
- **Weakness**
- **Mood changes such as irritability**
- **Confusion, or the inability to think straight**
- **Upset stomach**
- **Vomiting**
- **Decreased or dark colored urine**
- **Fainting or passing out**
- **Pale, clammy skin**

What should you do?

- **Act immediately. If not treated, heat exhaustion may advance to heat stroke or death.**
- **Move the victim to a cool, shaded area to rest. Don't leave the person alone. If symptoms include dizziness or lightheadedness, lay the victim on his or her back and raise the legs 6 to 8 inches. If symptoms include nausea or upset stomach, lay the victim on his or her side.**
- **Loosen and remove any heavy clothing.**
- **Have the person drink cool water (about a cup every15 minutes) unless sick to the stomach.**

- **Cool the person's body by fanning and spraying with a cool mist of water or applying a wet cloth to the person's skin.**
- **Call 911 for emergency help if the person does not feel better in a few minutes.**

HEAT STROKE — MEDICAL EMERGENCY: What are the symptoms?

- **Dry, pale skin with no sweating**
- **Hot, red skin that looks sunburned**
- **Mood changes such as irritability, confusion, or the inability to think straight**
- **Seizures or fits**
- **Unconsciousness with no response**

What should you do?

- **Call 911 for emergency help immediately.**
- **Move the victim to a cool, shaded area. Don't leave the person alone. Lay the victim on his or her back.**
  - **Move any nearby objects away from the person if symptoms include seizures or fits.**
  - **If symptoms include nausea or upset stomach, lay the victim on his or her side.**
- **Loosen and remove any heavy clothing.**
- **Have the person drink cool water (about a cup every 15 minutes) if alert enough to drink something, unless sick to the stomach.**
- **Cool the person's body by fanning and spraying with a cool mist of water or wiping the victim with a wet cloth or covering him or her with a wet sheet.**
- **Place ice packs under the armpits and groin area.**

How Can You Protect Yourself and Your Co-Workers?

- **Learn the signs and symptoms of heat-induced illnesses and how to respond.**
- **Train your workforce about heat-induced illnesses.**
- **Perform the heaviest work during the coolest part of the day.**
- **Build up tolerance to the heat and the work activity slowly. This usually takes about 2 weeks.**
- **Use the buddy system, with people working in pairs.**
- **Drink plenty of cool water, about a cup every 15 to 20 minutes.**
- **Wear light, loose-fitting, breathable clothing, such as cotton.**
- **Take frequent, short breaks in cool, shaded areas to allow the body to cool down.**
- **Avoid eating large meals before working in hot environments.**
- **Avoid alcohol or beverages with caffeine. These make the body lose water and increase the risk for heat illnesses.**

What Factors Put You at Increase Risk?

- **Taking certain medications. Check with your health-care provider or pharmacist to see if any medicines you are taking affect you when working in hot environments.**
- **Having a previous heat-induced illness.**
- **Wearing personal protective equipment such as a respirator or protective suit.**

ICS 230 - Daily Meeting Schedule

Incident:	MT Athos I	**Prepared By:**	Section, Planning	**at** 4/16/2005 13:00
Period:	Period 32 (4/19/2005 06:00 - 5/3/2005 06:00)	**Version Name:**	Period 32

Conference Call Procedure
MV Athos I

From time to time, the Unified Command will have a need to convene via conference call. Their needs could range from situational updates to critical information requiring Unified Command decisions.

The Unified Command will initiate conference calls by contacting the Planning Section Chief. The Planning Section Chief will require a list of persons that should be invited to participate in the Conference Call, the preferred time of the call, ask whether or not a scribe is required and a suggested agenda.

The Planning Section Chief will call ConferencePlus and schedule the call. The Planning Section Chief will then send an email to all invited conference call participants, which gives the call-in particulars and the agenda.

The Situation Unit and Operations and Planning must have a representative on the call to present information according to agenda.

WEEKLY UNIFIED COMMAND CONFERENCE CALL IN NUMBER:
Dial-In Number: 1 (888) 287-5343 (to join the audio conference call)
Alternate Dial-In: 1 (847) 619-6483
Pass code: 9285423# - If you call in before the moderator, you will be placed on hold with music background until the moderator

MODERATOR CALL IN ADDITIONAL NUMBER: 5233443

Agenda - Unified Command Meetings
Thursdays -- 0900hrs

1.	Introductions – UC reps self-introductions	All participants
2.	Situation Brief	Situation Unit Leader
3.	Planned Actions	Planning/Ops Chief
4.	Critical Issues/Needs	Operations Chief
5.	Review of Open Action Items	Situation Unit Leader
6.	Long Range Plan	Steve Kegelman
7.	New Jersey comments	NJ UC Rep
8.	Pennsylvania comments	PA UC Rep
9.	Delaware comments	DE UC Rep
10.	FOSC comments	FOSC
11.	Announce any necessary additional UC Meetings (other than Mondays)	RP
12.	Final remarks	RP
13.	*This concludes the Command and General Staff Meeting. Unified Command Members only from this point on.*

Annex XX

Historic Properties - Section 106

Protection of Historic Properties

Emergency Phase Checklist

9711 Protection of Historic Properties: Oil Discharge and Hazardous Materials Release Emergency Response Phase Checklist

When considering the protection of historic property always operate under the assumption that any oil discharge or hazardous substance release may impact or has already impacted historic properties, unless the release impacts one of the excluded areas.

Excluded areas may be specific geographic areas or types of areas where, should a release or spill occur, historic properties are unlikely to be affected.

Spills or Releases Categorically Excluded from Additional National Historic Preservation Act Section 106 Compliance include:

Spills or releases which occur on and stay on:

- ❑ Gravel pads
- ❑ Roads (gravel or paved, not including the undeveloped right-of-way)
- ❑ Parking areas (graded or paved)
- ❑ Dock staging areas less than 50 years old
- ❑ Gravel causeways
- ❑ Artificial gravel islands
- ❑ Drilling mats, pads, and/or berms
- ❑ Airport runways (improved gravel strips and/or paved runways)

Spills or releases into and that stay in:

- ❑ Lined pits; *e.g.,* drilling mud pits and reserve pits
- ❑ Water bodies where the spill or release
  - o Will not reach land or submerged land
    and
  - o Will not include emergency response activities with land or submerged land-disturbing components
- ❑ Borrow pits
- ❑ Concrete containment areas

Releases of:

- ❑ Gases (*e.g.,* chlorine gas)

If the incident affects only excluded areas, no further actions are necessary unless:

- Previously unidentified historic properties are discovered during the response
- The State Historic Preservation Officer or appropriate Federal or Indian organization notifies the Federal On-scene Coordinator that a CATEGORICALLY EXCLUDED spill or release may have the potential to affect a historic property
- The FOSC is not sure whether a spill or release fits into one of the categories listed above
- At any time the specifics of a spill or release change so it no longer fits into one of the categories above
- The spill or release is greater than 100,000 gallons

If the area where a spill or release occurs has not been excluded, then

- Activate the agreed-upon mechanism for addressing historic properties
  - Contact the Historic Properties Specialist
    - Pennsylvania: Jean Cutler, PA Bureau of Historic Preservation 717-705-4035
    - New Jersey: Mike Gregg, NJ Historic Preservation Office 609-633-2395
    - Delaware: Gwen Davis, DE State Historic Preservation Office 302-739-5685
  - Provide them with the information listed in Section 9714, Information to be provided to the FOSC's Historic Properties Specialist Upon Activation [Link to 9714]

Whenever the FOSC determines the requirements of the Programmatic Agreement (PA) cannot be satisfied concurrently with the paramount requirement of protecting public health and the environment, the determination shall be documented in writing including:

- The name and title of the person who made the determination
- The date of determination
- A brief description of the competing values between public health and safety and carrying on the provisions of the PA
- Provide the State Historic Preservation Officer or appropriate Federal or Indian organizations and/or public the information listed in Section 9713, Documentation of Actions Taken That Resulted In the Unavoidable Injury to Historic Properties [Link to 9713]

Documentation of Actions

But There is Injury to Historic Property

9713 Documentation of Actions Taken That Resulted In Unavoidable Injury To Historic Properties [1]

This form should be completed and submitted, along with any additional supporting documentation, in a reasonable and timely manner to the appropriate entities listed below:

Name of incident:

Date/time of incident:

Location of incident:

Brief description of response action approved (including the date) by the Federal On-Scene Coordinator (OSC) where protecting public health and safety was in conflict with protecting historic properties:

Brief description of why protecting public health and safety could not be accomplished while also protecting historic properties:

Federal OSC Name and Title:

Federal OSC Signature:

Date of Signature:

Faxed to:

- ☐ SHPO
- ☐ (Name and fax number of potentially-affected resource managers/trustees):
- ☐ (Name and fax number of potentially-affected resource managers/trustees):
- ☐ (Name and fax number of potentially-affected resource managers/trustees):

Information to Give

State Historic Preservation Officer (SHPO)

Upon Activation

9714 Information to Be Provided To The FOSC's Historic Properties Specialists Upon Activation[1]

Name of Incident:

_____

Date/time of incident:

_____

Spill/release location: land_____; water_____;

land/water_____

If on land, estimate number of acres contaminated_____

Spill/release coordinates: _____latitude; _____longitude.

If on land, _____township; _____range; _____section

Distance to nearest water body, if on land: _____km/mi

Distance to nearest land, if in water: _____km/mi

Product released: _____

Estimated volume of product released: _____gals/bbls

Release status: Stopped_____; Continuing_____; Unknown_____

Is spill/release: Contained_____; Spreading_____; Unknown_____

Estimated volume of product potentially released: _____gals/bbls/other measure

Have Regional Response Strategies been approved for the area affected or potentially-affected by the spill/release? Yes_____; No_____

Describe any response actions proposed or taken that include ground-disturbing activities:

Appendix I: Categorical Exclusion List—Releases or Spills Categorically Excluded from Additional National Historic Preservation Act Section 106 Compliance

Appendix II: Secretary of the Interior's Standards for Archeology and Historic Preservation

I. **PURPOSE**

A. The signatory Federal Departments and Agencies enter into this Programmatic Agreement (PA) to ensure that historic properties are taken into account in their planning for and conduct of the emergency response under the National Oil and Hazardous Substances Pollution Contingency Plan (NCP). 40 CFR Section Part 300. The National Conference of State Historic Preservation Officers (NCSHPO) is also a signatory, on behalf of State Historic Preservation Officers (SHPOs), to facilitate Federal agency ability to develop and execute a uniform nationwide approach for considering and treating historic properties before and during emergency response. In the event an individual SHPO is unable to respond, the Agency or Department may contact the NCSHPO or the Advisory Council on Historic Preservation (ACHP) to consider alternatives and receive assistance. The signatories agree that their Departments/Agencies will follow this PA or, to meet regional needs, develop regional PAs that are not inconsistent with this PA and the National Historic Preservation Act of 1966, as amended (NHPA), P.L. 89-665, 16 U.S.C. Section 470 *et seq.,* and the regulations promulgated thereto.

B. The NCP does not provide specific guidance for taking historic

properties into account during emergency response to an actual or threatened release of a hazardous substance, pollutant or contaminant or the discharge of oil or other pollutants (hereinafter, a release or spill). Also, emergency provisions contained in the regulations implementing Section 106 of the NHPA do not directly address requirements for such emergency responses. Accordingly, for the purpose of this PA, an "emergency" shall be deemed to exist whenever circumstances dictate that a response action to a release or spill must be taken so expeditiously that normal consideration of the Section 106 process is not reasonably practicable.

C. The purpose of this PA is to provide an alternative process to ensure appropriate consideration of historic properties within the meaning of the NHPA during emergency response to a release or spill. This PA does not address the consultation procedures under Section 106 of the NHPA once that phase of the response action has ended.

D. In carrying out duties under the NCP, including the priorities of protecting public health and safety, the Federal On-Scene Coordinator (OSC) may have to make emergency response decisions that adversely affect historic properties. By following this PA, however, the Federal OSC will be making an informed decision that takes historic property information into account prior to authorizing actions that might affect such property.

E. The responsibility of the Federal OSC in protecting public health and safety is paramount. That mission is a difficult one involving problems that cannot be anticipated and calling for judgment on the part of the Federal OSC. Nothing in this PA changes the national response priorities, nor does it change the effect of existing law.

F. 36 CFR Section 800.13 provides, *inter alia,* that:

> An Agency Official may elect to fulfill an agency's Section 106 responsibilities for a particular program, a large or complex project, or a class of undertakings...through a Programmatic Agreement.

36 CFR Section 800.13(e) provides that:

> An approved Programmatic Agreement satisfies the Agency's Section 106 responsibilities for all individual undertakings carried out in accordance with the agreement until it expires or is terminated.

During such time as the ACHP and the NCSHPO are signatories, compliance with this PA by a Federal OSC will be deemed to constitute compliance with Section 106 of the NHPA during pre-incident planning and emergency response activities.

II. LEGAL AUTHORITIES PROTECTING HISTORIC PROPERTIES

A. National Historic Preservation Act

1. In 1966, Congress instituted a policy to preserve the Nation's

cultural and historic heritage by enacting the NHPA. The NHPA implementing regulations most pertinent to actual or threatened releases of hazardous substances, pollutants or contaminants or oil spills are those of: 1) the ACHP, an independent Federal agency that administers Section 106 of the NHPA through procedures specified in 36 CFR Part 800, "Protection of Historic Properties," and 2) the Department of the Interior (DOI) regulations at 36 CFR Part 60, National Register of Historic Places.

2. Section 106 of the NHPA provides that Federal agencies are to take into account the effects of "Federal or federally assisted undertakings" on historic properties that are listed in or eligible for inclusion in the National Register of Historic Places. It further affords the ACHP an opportunity to comment on the undertaking.[(1)]

B. This PA does not address other Federal laws defining and protecting historic properties, such as:

1. The Archaeological Resources Protection Act (ARPA), 16 U.S.C. Section 470aa *et seq.,* which provides for the protection of archeological sites and other resources. ARPA establishes criminal and civil penalties for actual or attempted illegal excavation or removal of or damage to archeological resources; illegal trafficking in archeological resources; and knowingly causing another to commit an ARPA violation;
2. The Native American Graves Protection and Repatriation Act (NAGPRA), 25 U.S.C. Section 3001 *et seq.,* which provides for the protection of Native American human remains and other defined classes of cultural items. NAGPRA also establishes criminal penalties for illegal trafficking in these cultural items. 18 U.S.C. Section 1170;
3. The Antiquities Act of 1906, 16 U.S.C. Section 433 *et seq.,* which establishes criminal penalties for non-permitted appropriation, excavation, injury, or destruction of any historic or prehistoric ruin or monument, or any object of antiquity, situated on lands owned or controlled by the Federal Government; and
4. The National Marine Sanctuaries Act (also known as Title III of the Marine Protection, Research and Sanctuaries Act, 16 U.S.C. Section 1431, *et seq.,* which establishes civil penalties for destruction of, loss of, or injury to a sanctuary resource, including historic properties. In addition to fines, parties can also be held responsible for response costs; damages including replacement cost, restoration cost, or acquisition of an equivalent sanctuary resource, and lost-use value of that resource and interest.

C. Many States also have laws defining and protecting historic properties. Regional PAs may consider State laws relevant to the historic properties in the region, to the extent they are not inconsistent with Federal law.

III. DEFINITION OF "HISTORIC PROPERTY"

A. The term "historic property" is defined in the NHPA as: "any prehistoric or historic district, site, building, structure, or object included in, or eligible for inclusion on the National Register"; such term includes artifacts, records, and remains which are related to such district, site, building, structure, or object. 16 U.S.C. Section 470(w)(5).

B. Criteria for listing a property in the National Register of Historic Places are found at 36 CFR Part 60. The statutory definition of historic properties and the established criteria determine whether a historic property needs to be considered during emergency response. A historic property need not be formally listed on the National Register to receive NHPA protection, it need only meet the National Register criteria (i.e., be eligible for listing in the National Register). Section VI.C.2, below, discusses determining the National Register eligibility of historic properties during emergency response.

IV. RESPONSIBILITY FOR HISTORIC PROPERTIES CONSIDERATION

A. For the purpose of this PA, the Federal OSC, as the Federal official designated to coordinate and direct response actions, is responsible for ensuring that historic properties are appropriately considered in planning and during emergency response.

B. Planning Support/Coordination

1. The NCP, at 40 CFR Section 300.210(c), provides that Area Contingency Plans (ACPs) are to be developed under the direction of a Federal OSC. The Federal OSC shall ensure that ACPs include the information on consideration of historic properties and are developed in consultation with the parties specified in Section V of this agreement.
2. Federal agencies with expertise in protection of historic properties available to assist the Federal OSC during preparedness planning include the Department of the Interior,[(2)] the ACHP, and other Federal land-managing agencies for properties on their lands. The primary source of information on historic properties in an area, particularly properties not on Federal lands, is the SHPO, who is the official appointed by the Governor as part of the State's participation in NHPA programs. Other parties that may assist are listed in V.A. of this PA.
3. The National Program Center (NPC) of the National Park Service, consistent with its authority and responsibilities, will provide coordination of appropriate expertise to Area

Cornmittees and Regional Response Teams (RRTs) for pre-incident planning activities through the United States Coast Guard (Coast Guard) and the United States Environmental Protection Agency (EPA). The NPC will coordinate through the Commandant of the Coast Guard and the Office of Emergency and Remedial Response of EPA.

4. Prior to finalizing or subsequently revising ACPs, the Federal OSC will provide a draft of sections addressing historic properties identification and protection to the parties identified in Section V.A. of this PA. Each party shall have 30 calendar days from receipt to review the draft and provide comments to the Federal OSC. Should any reviewing party file a timely objection to the draft or any portion thereof, the Federal OSC will consult with the objecting party to resolve the objection. If the objection cannot be resolved, the Federal OSC will provide documentation of the dispute to the ACHP and request their comments. The ACHP comments will be taken into account by the Federal OSC in finalizing or revising ACPs.

C. Emergency Response Support/Coordination

1. To ensure historic properties are considered during emergency response, the Federal OSC must have access to reliable and timely expertise and support in order to make timely and informed decisions about historic properties.
2. A Federal OSC may obtain historic properties expertise and support m any one of several ways. These include implementing an agreement with State or Federal agencies that have historic properties specialists on staff (*see* IV.B.2), executing a contract with experts identified in ACPs or hiring historic properties specialists on staff. Historic properties specialists made available under contract or hired must:
    a. Meet the qualifications listed in the *Secretary of the Interior's Standards and Guidelines for Archeology and Historic Preservation,* 48 *Federal Register* 44738-39 (September 29, 1983); *see* Appendix II; and
    b. Be available to assist the Federal OSC whenever needed.

V. PRE-INCIDENT PLANNING

A. As part of pre-incident planning activities, Federal OSCs (or the OSC's management) shall consult with the SHPO, Federal land-managing agencies, appropriate Indian tribes and appropriate Native Hawaiian organizations, as defined in Section 301 of the NHPA, and the other interested parties identified during pre-incident planning, as described in Section IV.B of this PA, to:

1. Identify historic properties.
    a. Identify: 1) historic properties that have been listed in

or determined eligible for inclusion in the National Register of Historic Places that might be affected by response to a release or spill; and 2) unsurveyed areas where there is a high potential for the presence of historic properties.

b. Identify exclusions. These may be specific geographic areas or types of areas where, should a release or spill occur, historic properties are unlikely to be affected. This includes the specifics listed in Appendix I and any additional exclusions agreed on by the signatories to this or a regional PA. Incidents in areas covered by exclusions would not require consideration for protection of historic properties, except as provided in Section VI.A.1.[(3)]

2. Develop a list of parties that are to be notified in the event of an incident in a non-excluded area. This list should include the SHPO for the State in which the incident occurred, Federal and Indian tribal land owners or land managers and Hawaiian Native organizations in the area where the incident occurred, if any.

3. Develop emergency response strategies that can be reasonably anticipated to protect historic properties. The Federal OSC shall ensure that response strategies, including personnel and equipment needed, are developed to protect or help protect historic properties at risk. This includes consideration of the sensitivity of historic properties to emergency response measures proposed in ACPs or other response plans, including chemical countermeasures and *in situ* burning.

B. The Federal OSC shall ensure that historic properties protection strategies can be carried out by:

1. Identifying who will be responsible for providing expertise on historic properties matters to the Federal OSC during emergency response. Depending on the size and complexity of the incident, a Federal OSC historic properties specialist or a historic properties technical advisory group convened by the specialist may be the most effective mechanism;

2. Providing information on availability of appropriate training for historic property specialists to participate in emergency response, ~g., Hazardous Waste Operations and Emergency Response (HAZWOPER) training, familiarity with all relevant contingency plans and response management systems, etc.; and

3. Working with the parties listed in section V.A. to obtain information for response personnel on laws protecting and activities that may potentially affect historic properties.

VI. FEDERAL LEAD EMERGENCY RESPONSE

A. The Federal OSC shall determine whether the exclusions described in section V.A.l.b. apply.
   1. If the incident affects only excluded areas, no further actions are necessary under this PA, unless:
      a. Previously unidentified historic properties are discovered during emergency response; or
      b. The SHPO (or appropriate Federal, Indian, or Hawaiian Native organizations) notifies the Federal OSC that a categorically excluded release or spill may have the potential to affect a significant historic property.
   2. If the area where a release or spill occurs has not been excluded, in the cases specified in Section VI.A. l .a or b, if the Federal OSC is unsure whether an exclusion applies, or if the specifics of the incident change so that it no longer fits into one of the exclusions, the remaining steps in this Section shall be followed.

B. Activate the agreed-upon mechanism for addressing historic properties, including notification of the parties identified pursuant to Section V.A.2., and consultation with these parties concerning the identification of historic properties that may be affected, assessing the potential effects of the emergency response, and developing and implementing emergency response activities. These requirements for notification and consultation shall be satisfied if the Federal OSC makes reasonable and timely efforts to notify and consult the parties listed in this Section. Thereafter there shall be additional consultation to the extent practicable.

C. Verify identification of historic properties.
   1. Consult with the SHPO, land owners and/or land managers, appropriate Indian tribes and Native Hawaiian organizations, and other interested parties identified in pre-incident planning to verify the location of historic properties identified during the planning process and determine if other historic properties exist in areas identified in V .A. l .a.2. that might be affected by the incident or the emergency response.
   2. If newly discovered or unanticipated potential historic properties are encountered during emergency response actions, the Federal OSC shall either: 1) consult with the SHPO (or appropriate Federal, Indian, or Hawaiian Native organizations) to determine if the properties are eligible for inclusion in the National Register, or 2) treat the properties as eligible.

D. Assess potential effects of emergency response strategies on historic properties. Such assessment shall be done in consultation with the parties listed in Section V A.

1. The potential adverse effects of releases or spills and of emergency response on historic properties may include, but are not limited to:
    a. Physical destruction, damage, or alteration of all or part of the historic property;
    b. Isolation of the property from or alteration of the character of the property's setting when that character contributes to the property's qualification for the National Register; and
    c. Introduction of visual, audible, or atmospheric conditions that are out of character with the property or alter its setting.
2. Emergency response actions that may have adverse effects on historic properties include, but are not limited to:
    a. The placement of physical barriers to deter the spread of released or spilled substances and the excavation of trenches to stop the spread of the released or spilled substances; and
    b. Establishing camps for personnel, constructing materials storage and staging yards, excavating borrow pits for fill materials, and constructing alignments for road access.
3. Direct physical contact of historic properties with released or spilled substances may result in one or more of the following: 1) inability to radiocarbon date the contaminated resources; 2) acceleration of deterioration of an object or structure; or 3) prevention of identification of historic properties in the field. As a result, important scientific, historic, and cultural information may be lost.

E. Make and implement decisions about appropriate actions. The Federal OSC shall take into account professional comments received from the parties listed in Section V.A. in making decisions that might affect historic properties.
1. Emergency response strategies delineated in plans may need to be reviewed based on information available at the time of an actual incident. The purpose of this review is to evaluate whether implementation of the strategies in the plan might, for the emergency response action that is underway, adversely affect historic properties and, if so, how such effects might be avoided or reduced.
2. Make arrangements for suspected artifact theft to be reported to the SHPO, law enforcement officials, and the land owner/manager.
3. Arrange for disposition of records and collected materials.
4. Ensure the confidentiality of historic property site location information, consistent with applicable laws, so as to

minimize opportunities for vandalism or theft.

F. Whenever the Federal OSC determines the requirements of this Section cannot be satisfied concurrently with the paramount requirement of protecting public health and safety, the determination shall be documented in a writing including the name and title of the person who made the determination; the date of determination; and a brief description of the competing values between public health and safety and carrying on the provisions of this Section. Notwithstanding such a determination, if conditions subsequently permit, the Federal OSC shall endeavor to comply with the requirements of this Section to the extent reasonably practicable.

VII. **REGIONAL PAs**

A. Regional PAs may be developed as provided in I.A. as an alternative to this national PA. Regional PAs are to include the provisions of this PA and may include appropriate additional provisions responsive to regional concerns.

B. A regional PA should be signed by appropriate regional-level Federal officials, State agencies, tribal officials and the ACHP.

C. Either this PA or a PA developed at a regional level may be adopted by the RRT and incorporated or referenced in Regional Contingency Plans (RCPs), 36 CFR Section 300.210(b), and ACPs in the region.

VIII. **AUTHORITY, EFFECTIVE DATE, WITHDRAWAL, AMENDMENT**

A. The signatories below are authorized to sign the PA on behalf of their respective Department, Agency or organization. This PA may be signed in counterparts.

B. In order to allow sufficient time for pre-incident planning and other preparedness activities, this PA shall not be become effective with respect to a signatory Department or Agency until ninety (90) days after it has been signed on the Department's or Agency's behalf.

C. Any signatory may withdraw from this PA by sending, through an official authorized to act in this matter, written notice to all current signatories at least thirty (30) days in advance of the effective date of withdrawal. The requirements contained in this PA will remain in full force and effect with respect to remaining signatories.

D. Nothing herein prevents the signatories from agreeing to amend this PA.

ENDNOTES

1) Section 106 of the NHPA provides, *inter alia,* as follows:

Effect of Federal undertakings upon property listed in National Register; comments by Advisory Council on Historic Preservation

The head of any Federal agency having direct or indirect jurisdiction over a proposed Federal or federally assisted undertaking in any State and the head of any Federal department or independent agency having authority to license any undertaking shall, prior to approval of the expenditure of any Federal funds on the undertaking or prior to the issuance of any license, as the case may be, take into account the effect of the undertaking on any district, site, building, structure, or object that is included in or eligible for inclusion in the National Register. The head of any such Federal agency

with regard to such undertaking.

16 U.S.C. Section 470f.

2) 40 CFR Section 300 175(b)(9) reads, in pertinent part, as follows:

DOI may be contacted through Regional Environmental Officers (REOs), who are the designated members of RRTs.... [B]ureaus and offices have relevant expertise as follows:
...(viii) National Park Service: General biological, natural, and cultural resource managers to evaluate, measure, monitor and contain threats to park system lands and resources; archaeological and historical expertise in protection, preservation, evaluation, impact mitigation, and restoration of cultural resources....

3) Response to spills or releases that involve non-excluded areas should be considered to have the potential to adversely affect historic properties that are listed in or eligible for inclusion in the National Register.

APPENDIX I.—CATEGORICAL EXCLUSION LIST

Releases or Spills Categorically Excluded from Additional National Historic Preservation Act Section 106 Compliance

Releases/Spills onto (which stay on):

- Gravel pads
- Roads (gravel or paved, not including the undeveloped right-of-way)
- Parking areas (graded or paved)
- Dock staging areas less than 50 years old
- Gravel causeways
- Artificial gravel islands
- Drilling mats, pads, and/or berms
- Airport runways (improved gravel strips and/or paved runways)

Releases/Spills into (that stay in):

- Lined pits; *e.g.,* drilling mud pits and reserve pits
- Water bodies where the release/spill will not: 1) reach land/submerged land; and 2) include
- emergency response activities with land/submerged land-disturbing components
- Borrow pits
- Concrete containment areas

Releases/Spills of:

- Gases (*e.g.,* chlorine gas)

IMPORTANT NOTE TO FEDERAL OSC:

1) IF YOU ARE NOT SURE WHETHER A RELEASE OR SPILL FITS INTO ONE OF THE CATEGORIES LISTED ABOVE;

2) IF AT ANY TIME, THE SPECIFICS OF A RELEASE OR SPILL CHANGE SO IT NO LONGER FITS INTO ONE OF THE CATEGORIES LISTED ABOVE;

3) IF THE SPILL IS GREATER THAN 100,000 GALLONS; AND/OR

4) IF THE STATE HISTORIC PRESERVATION OFFICER NOTIFIES YOU THAT A CATEGORICALLY EXCLUDED RELEASE OR SPILL MAY HAVE THE POTENTIAL TO AFFECT A HISTORIC PROPERTY

YOU OR YOUR REPRESENTATIVE MUST FOLLOW THE SECTION VI OF THIS PA.

APPENDIX II.—SECRETARY OF THE INTERIOR'S STANDARDS for Archeology and Historic Preservation

48 *Federal Register* 44738-39 (September 29, 1983)

Professional Qualifications Standards

The following requirements are those used by the National Park Service and have been previously published in the Code of Federal Regulations 36 CFR Part 61. The qualifications define minimum education and experience required to perform identification, evaluation, registration, and treatment activities. In some cases, additional areas or levels of expertise may be needed depending on the complexity of the task and the nature of the historic properties involved. In the following definitions, a year of full-time professional experience need not consist of a continuous year of full-time work but may be made up of discontinuous periods of full-time or part-time work adding up to the equivalent of a year of full-time experience.

- **History**

  The minimum professional qualifications in history are a graduate degree in history or closely related field; or a bachelor's degree in history or closely related field plus one of the following:

1. At least two years of full time experience in research, writing, teaching, interpretation, or the demonstrable professional activity with an academic institution, historic organization or agency, museum, or other professional institution; or
2. Substantial contribution through research and publication to the body of scholarly knowledge in the field of history.

- **Archeology**

  The minimum professional qualifications in archeology are a graduate degree in archeology, anthropology, or closely related field plus:

  1. At least one year of full-time professional experience or equivalent specialized training in archeological research, administration or management;
  2. At least four months of supervised field and analytic experience in general North American archeology; and
  3. Demonstrated ability to carry research to completion.

  In addition to these minimum qualifications, a professional in prehistoric archeology shall have at least one year of full-time professional experience at a supervisory level in the study of archeological resources of the prehistoric period. A professional in historic archeology shall have at least one year of full-time professional experience at a supervisory level in the study of archeological resources of the historic period.

- **Architectural History**

  The minimum professional qualifications in architectural history are a graduate degree in architectural history, art history, historic preservation, or closely related field, with course work in American architectural history; or a bachelor's degree in architectural history, art history, historic preservation or closely related field plus one of the following:

  1. At least two year of full-time experience in research, writing, or teaching in American architectural history or restoration architecture with an academic institution, historical organization or agency, museum. or other professional institution; or
  2. Substantial contribution through research and publication to the body of scholarly knowledge in the field of American architectural history.

- **Architecture**

  The minimum professional qualifications in architecture are a professional degree in architecture plus at least two years of full-time experience in

architecture; or State license to practice architecture.

- **Historic Architecture**

  The minimum professional qualifications historic in architecture are a professional degree in architecture or a State license to practice architecture, plus one of the following:

  1. At least one year of graduate study in architectural preservation, American architectural history, preservation planning, or closely related field; or
  2. At least one year of full-time professional experience on historic preservation projects.

  Such graduate study or experience shall include detailed investigations of historic structures, preparation of historic structure research reports, and preparation of plans and specifications for preservation projects.

Updated April 30, 2002

Annex YY

InSitu Burning Within

SecDelBay AOR

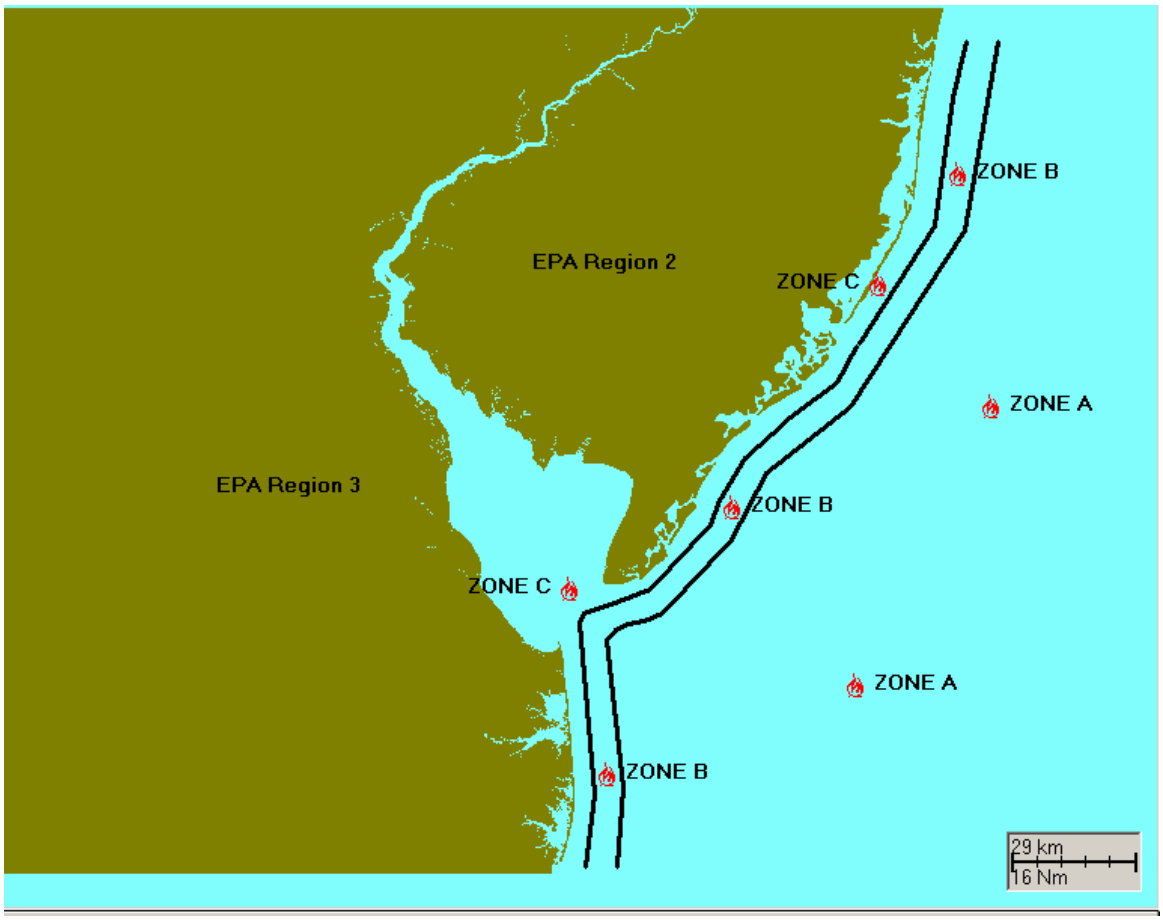
9718 Use of In-Situ Burn within Sector Delaware Bay

In-situ burn (ISB) is a response technique where operations are conducted to remove oil by burning, it is used when the physical removal of oil is unfeasible or inadequate. ISB may be conducted on the open ocean, on land, or on a ship. While this technique requires specialized equipment, it requires less labor than most other response techniques and be applied in areas where other methods cannot be used. Burning can quickly remove large quantities of oil, and the need for recovery and storage is minimized.

The Federal On-scene Coordinator can use In-situ burn within the following set of guidelines:

- Prevent or substantially reduce a hazard to human life
- Minimize the environmental impact of the spilled oil
- Reduce or eliminate economic or aesthetic losses which would otherwise presumably occur without the use of this technique.

In-Situ Burning Authorization Zones



Zone A
Open-water burning

Pre-authorized

Zone A includes any area falling exclusively under federal jurisdiction, which is at least 3 miles seaward from any state coastline; and seaward of any state waters, or as designated by separate Letter of Agreement with each individual state, the Coast Guard (USCG), Environmental Protection Agency (EPA), Department of Interior (DOI), and Department of Commerce (DOC).

The FOSC is pre-authorized to use ISB within Zone A. The USCG, EPA, DOC, DOI and the state(s) agree that the decision to use ISB rests solely with the pre-designated USCG FOSC, and no further approval, concurrence or consultation on the part of the USCG is required.

The Federal On-Scene Coordinator will immediately notify the following entities of the decision to conduct burning within Zone A via the appropriate Regional Response Team representatives.

- Environmental Protection Agency
- Affected State(s)
- Department of Commerce
- Department of Interior

Zone B

Requires Case by Case Approval
Zone B includes:

- Anywhere within state waters
- Waters designated as a marine reserve
- National Marine Sanctuary
- National or State Wildlife Refuge
- Unit of the National Park Service
- Proposed or designated Critical Habitats
- Coastal wetlands including aquatic vegetation and algal beds

To use In-situ Burn in Zone B the FOSC must:

- Request authorization from the Regional Response Team and the affected state(s)

- Receive consent from the Environmental Protection Agency and affected state(s)
- Receive concurrence from Department of Interior
- Consult with the Department of Commerce

Designated agency representatives must respond within (4) hours from the time the FOSC establishes deliberative communication. **If there is no response, the FOSC may proceed with ISB operations.**

Zone C (no preauthorization)

RRT II approval needed on a case-by-case basis.

Zone R (Exclusion Zones)

No ISB operations will be conducted in Zone R unless ISB is necessary to prevent or mitigate a risk to human health and safety.

Burning in Herbaceous Wetlands

FOSC can use ISB as a response countermeasure in herbaceous wetlands under the following conditions:

- Obtain concurrence from the Regional Response Team
- Approval from the Environmental Protection Agency and affected State(s)
- Concurrence from the Department of Interior
- Consult with the Department of Commerce and, if applicable, Native American Community officials
- The Wetland In-Situ Burn Evaluation Checklist from RRT III's Regional Contingency Plan must be used prior to ISB operations (http://www.uscg.mil/lantarea/rrt/rcp/Policy/BURNindex.html)

Action to be taken prior to conducting In-situ Burn operations

- Consult the In-situ burn Decision Flow Chart and Evaluation Checklist [Link to Section 9788]
- Ensure authorization to burn is approved
- Notify appropriate agencies and the states of New Jersey, Pennsylvania and Delaware
- Ensure the Atlantic Strike Team and National Oceanic Atmospheric Administration (NOAA) Scientific Support Coordinator are prepared to support burning operations
- Implement the Special Monitoring of Advanced Response Technologies (SMART) for conducting real time on-scene air monitoring and analysis

- Ensure Safety Officer addresses the specific hazards of an In-situ burn operation in the Site Safety Plan
- Ensure that In-situ burn is conducted in accordance with any consultations approved by the U.S. Fish and Wildlife Service and National Marine Fisheries Service, under Section 7 of the Endangered Species Act
- Prior to In-situ burn, a survey will be conducted to determine if any threatened or endangered species are present in the burn area or otherwise at risk from any burn operations
- Ensure measures are taken to prevent risk of injury to any wildlife, especially endangered and threatened species

Conducting the In-situ burn

Burning will be conducted in a way that allows for effective control of the burn, including the ability to rapidly stop the burn if necessary. Contained and controlled burning is the preferred method of burning using fire-resistant boom.

Mechanical recovery equipment shall be mobilized on-scene, when feasible, for backup and complimentary response capability. Provisions must be made for collection of burn residue following the burn.

Post-Incident Report

Any use of ISB requires that a post-incident report be provided by the FOSC to the RRT within 45-days of the operation.

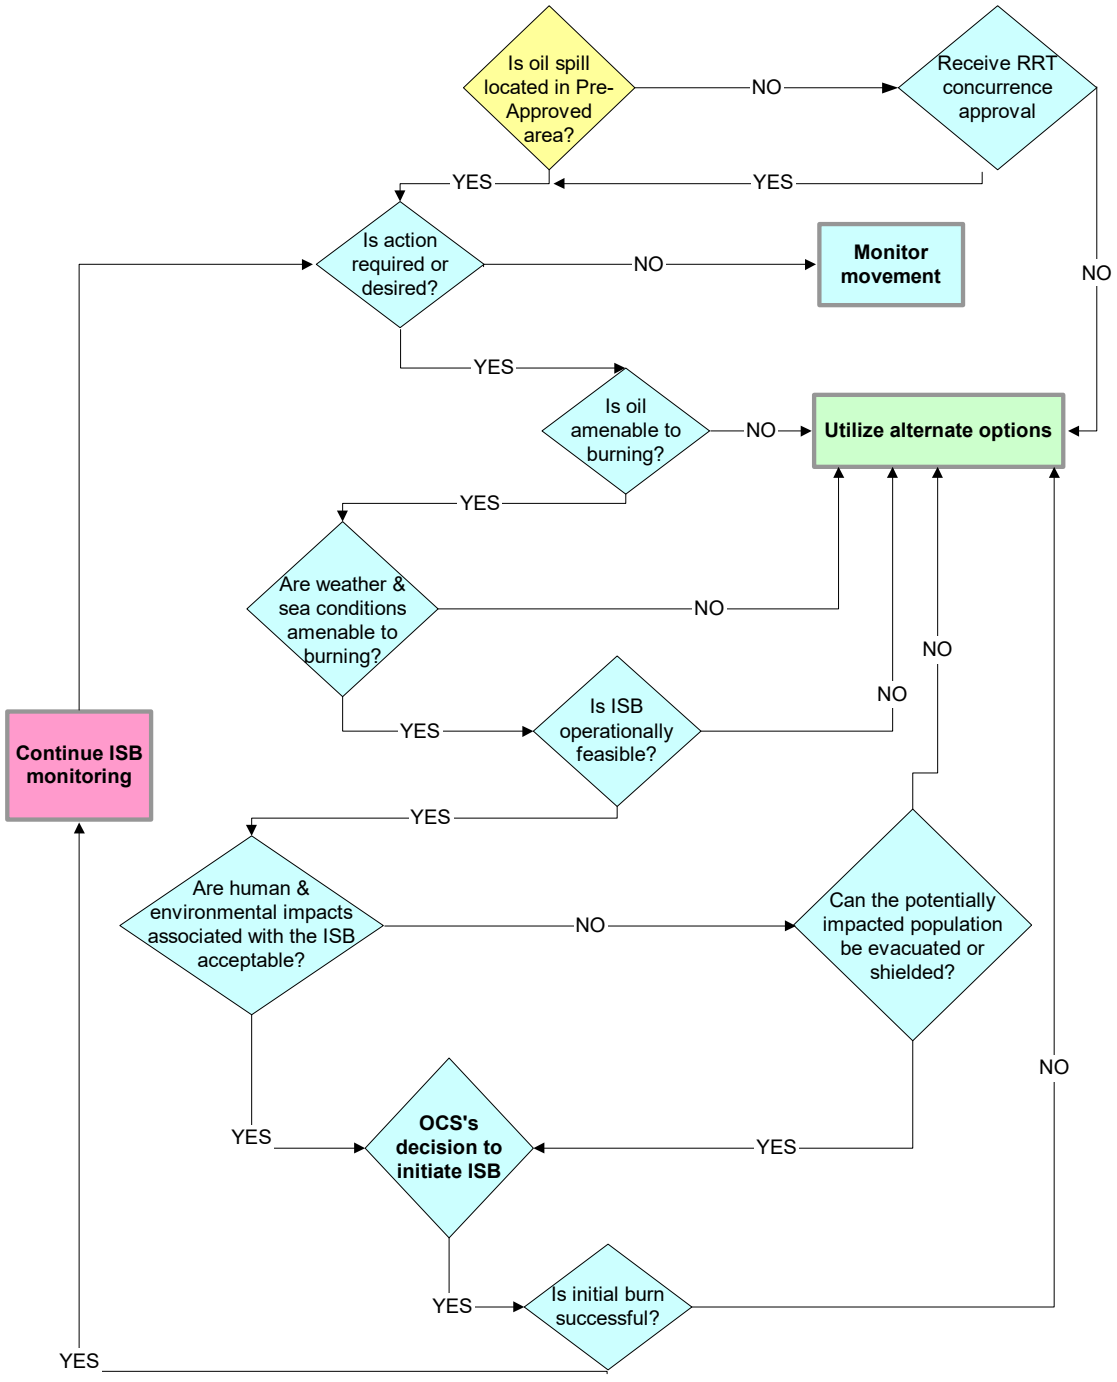
InSitu Burning

Decision Flow Chart

9788 In-Situ Burning Decision Flow Chart and Evaluation Checklist

To assist the Federal On-scene Coordinator and the Unified Command with planning for the use of in-situ burning in response to an oil spill in Sector Delaware Bay the following flow chart and checklist should be consulted.

ISB Decision Flow Chart[1]



[1] In-situ flow chart was taken from Regional Response Team III's Regional Contingency Plan

9788 In-Situ Burning Decision Flow Chart and Evaluation Checklist

ISB Evaluation Checklist

For in-situ burning to be successful the Unified Command team needs to assess both the technical and political feasibility of its use. The information contained in Section 9718, Use of In-Situ Burn within Sector Delaware Bay, and this worksheet are intended to assist the Unified Command in determining both the technical viability of conducting an in-situ burn documenting concurrence from stakeholders.

Weather and Sea Conditions Optimal/Sub-Optimal

- Weather forecast precipitation-free (affects ignition)?
- Winds/forecast winds less than 25 knots?
- Visibility sufficient for burn operations/observations (greater than 500 feet vertical, 1/2 mile horizontal)?
- Wave heights/predicted wave heights less than 2-3 feet?
- Attachments/Additional Information:

Operational Feasibility Yes or Probable No or Unlikely

- Is an operational plan written or in process? (if available, attach)
- Is needed air support available?
- Are personnel properly trained, equipped with safety gear, and covered by a site safety plan?
- Are all necessary communications possible (i.e. between aircraft, vessels, and control base in an open water burn)?
- Can all necessary equipment be mobilized during window of opportunity (i.e. fire boom, igniter, tow boats, residue collection equipment)?
- Can undesirable secondary fires be avoided?
- Can burn be safely extinguished or controlled?
- Can aircraft pilots and mariners be adequately notified, as necessary?
- Are equipment and personnel available for residue recovery?
- If ignition from a helicopter, FAA approved equipment?
- Attachments/Additional Information:

Human and Environmental Impacts Yes or Probable No or Unlikely

- Public exposure to PM-10 (particulates <10μm) not expected to exceed 150 μg/m3 averaged over 1 hour as a result of burn? (current NRT planning guideline)
- Can burning be conduced at a safe distance from other response operations, and public, recreational and commercial activities?
- Is particulate (hour-averaged PM-10) monitoring available?
- Can public be adequately notified of burn?
- Trustees consulted if endangered species in immediate burn area?
- Attachments/Additional Information

RRT2 InSitu Burning MOU

Memorandum Of Understanding

Among
U.S. Coast Guard District 1 (USCGD1)
and
U.S. Coast Guard District 5 (USCGD5)
and
U.S. Environmental Protection Agency Region II (EPA)
and
U.S. Department of the Interior (DOI)
and
U.S. Department of Commerce /
National Oceanic and Atmospheric Administration (DOC/NOAA)
and
State of New Jersey Department of Environmental Protection (NJ DEP)
and
New York State Department of Environmental Conservation (NYS DEC)

PURPOSE

This Memorandum of Understanding (MOU) is designed to implement sections of Subpart J of the National Oil and Hazardous Substances Contingency Plan (NCP) and the requirements of 33 CFR 1321 (j) (4) (C) (v), the Federal Water Pollution Control Act (FWPCA), as amended by the Oil Pollution Act (OPA) of 1990. This MOU provides pre-authorization for use of in-situ burning by the USCG Federal On-Scene Coordinator (OSC) in response to coastal oil discharges within the jurisdiction of the Region II Regional Response Team (RRT).

This MOU will be incorporated into Subpart J of the Regional Contingency Plan (RCP).

AUTHORITY

Subpart J of the NCP specifies that RRT's shall address, as part of their planning activities, the desirability of using appropriate burning agents, and that Regional Contingency Plans shall, as appropriate, include applicable pre-authorization plans and address the specific contexts in which such products should and should not be used.

Subpart J also provides that the OSC, with the concurrence of the EPA representative to the RRT, and the States with jurisdiction over the navigable waters threatened by the oil discharge, and in consultation with the DOC and DOI natural resource trustees, may authorize the use of burning agents on a case-by-case basis.

Commandant, United States Coast Guard, has pre-designated the USCG Captains Of The Port (COTPs) as the OSCs for coastal oil discharges (as defined in 33 CFR Part 3 and subject to joint response boundary agreements with EPA), and has delegated to the COTP the authority and responsibility for compliance with the FWPCA and its amendments.

The Governor of the State of New Jersey has designated the Commissioner of the Department of Environmental Protection (NJ DEP) the authority and responsibility to approve for the use of in-situ burning for the control of oil spills.

The Governor of the State of New York has designated the Commissioner of the Department of Environmental Conservation (NYS DEC) the authority and responsibility to approve for the use of in-situ burning for the control of oil spills.

The DOI and DOC/NOAA are designated Federal trustees of certain natural resources under Subpart G of the NCP and are to be consulted regarding the determination to burn oil in-situ in United States waters.

This MOU constitutes pre-concurrence for USCG, EPA, NYS DEC, NJ DEP, DOC/NOAA, and DOI for the use of in-situ burning in the pre-approved area ("A" zone), and in the conditionally pre-approved area ("B" zone) when wind conditions are favorable.

SCOPE

The USCG, EPA, DOI, DOC/NOAA and the states of New Jersey and New York agree that the primary method of controlling discharged oil shall be the physical removal of the oil from the environment. These agencies recognize that in certain circumstances timely effective physical containment, collection, and removal of the oil may not be possible, and that the utilization of in-situ burning, alone or in conjunction with mechanical removal methods and/or chemical countermeasures, may be considered as a means to minimize substantial threat to public health or welfare, or minimize serious environmental damages.

This MOU establishes the pre-authorized plans for in-situ burning to be used by the OSC in certain waters under the jurisdiction of RRT II. These waters include the Areas of Responsibility (AORs) for the COTPs for Long Island Sound (COTP-LIS), New York (ACT-NY), and Philadelphia (COTP-PHIL). The geographic areas and conditions are as follows (see Figure 1):

1) "A" Zones - Pre-authorization for Open-Water Burning

Geographic Scope:

Zone "A" is defined as waters under the jurisdiction of RRT II and not classified as "B", "C", or "E" zones, that lie 6 nautical miles (nm) and seaward of the Territorial Sea Baseline (as defined in 33 CFR 2.05-10) along the coast of New Jersey (north of the demarcation between Federal Region II and Region III) and along the south shore of Long Island (New York) west of a line from Montauk Point Light bearing 132 degrees True to the outermost extent of the Exclusive Economic Zone (EEZ).

Advance Approval for Zone "A":

Within Zone "A", the decision to use in-situ burning rests solely with the OSC. No further concurrence or consultation on the part of the OSC is required with EPA, DOC/NOAA, DOI, or the states of New York or New Jersey. However, if threatened or endangered species are present in the burn area, then the trustee agency must be consulted prior to initiating burning operations.

The USCG will immediately notify EPA, DOC/NOAA, DOI, and the states of New York and/or New Jersey of a decision to conduct burning within the "A" zone via each agency's respective RRT representative.

2) "B" Zones - Pre-authorization with Favorable Wind Conditions

Geographic Scope:

Zone "B" is defined as waters under the jurisdiction of RRT II and not classified as "A", "C", or "E" zones, that lie between 3 nm and 6 nm from the Territorial Sea Baseline along the coast of New Jersey (north of the demarcation between Federal Region II and Region III) and along the south shore of Long Island (New York) west of a line from Montauk Point Light bearing 132 degrees True.

Advance Approval for Zone "B":

Within Zone "B", the decision to use in-situ burning rests solely with the OSC if and only if the prevailing wind direction is decidedly seaward and is expected to remain in the seaward direction throughout the duration of the planned in-situ burning operations. If this is the case, no further concurrence or consultation on the part of the OSC is required with EPA, DOC/NOAA, DOI, or the states of New York or New Jersey. If the prevailing wind direction is not decidedly seaward, the OSC is required to follow standard consultation and concurrence procedures. In either case, if threatened or endangered species are present in the burn area, then the trustee agency must be consulted prior to initiating burning operations (see Figure 2).

The USCG will immediately notify EPA, DOC/NOAA, DOI, and the states of New York and/or New Jersey of a decision to conduct burning within the "B" zone via RRT representatives.

3) "C" Zones - Waters Requiring Case-by-Case Approval

Geographic Scope:

Zone "C" is defined as waters under the jurisdiction of RRT II and not classified as "A", "B", or "E" zones, that 1) lie within state territorial boundaries, 2) are designated as marine reserves, National Marine Sanctuaries, National or State Wildlife Refuges, units of the National Park Service, or proposed or designated Critical Habitats, or 3) are considered coastal wetlands, including submerged algal beds and submerged seagrass beds.

If the OSC feels that in-situ burning within the "C" zone would be beneficial, a request for authorization must be submitted to EPA, USCG, DOC/NOAA, DOI, and the states of New York and/or New Jersey, along with the information specified in the checklist in Appendix II. The OSC is granted authority to conduct in-situ burning in "C" zones only after consultation with DOC/NOAA and DOI, and only after concurrence is given by EPA and the affected states. The EPA, USCG, DOC/NOAA, DOI and the affected state(s) will respond to the OSC's request for burning in Zone "C" within four hours of receipt of the information specified in the checklist in Appendix II.

The USCG will immediately notify EPA, DOC/NOAA, DOI, and the states of New York and/or New Jersey of a decision to initiate an approved burn within the "C" zone via each agency's respective RRT representatives.

4) "E" Zones - Exclusion Zones

Geographic Scope:

An "E" zone is defined as an area under the jurisdiction of RRT II and not classified as an "A", "B", or "C" zone, that has been designated by the USCG, EPA, DOC/NOAA, DOI and the states of New York and New Jersey, or the Area Committees as an exclusion zone. These areas will be identified and listed in the appropriate Area Contingency Plans and as attachments to this MOU in the Regional Contingency Plan.

No in-situ burning operations will be conducted in an "E" zone unless 1) in-situ burning is necessary to prevent a clear, immediate, and extreme risk to human health or safety, or 2) an emergency modification of this agreement is made on an incident-specific basis.

PROTOCOLS

As attested by the signatures set forth at the end of this document, the USCG, EPA, DOI, DOC/NOAA, NJ DEP , and NYS DEC agree that the predesignated OSC has the authority and may order the use of in-situ burning on oil discharges using the guidelines found in Subpart J and Appendix M of the Region II RCP and Annex G of the COTP-LIS, ACT-NY, and COTP-PHIL Area Contingency Plans (ACPs) subject to the following conditions:

1. The decision to use in-situ burning on a discharge of oil in accordance with this Agreement rests solely with the pre-designated OSC. This responsibility may not be delegated.

2. The OSC may authorize the use of in-situ burning on a discharge of oil to prevent or substantially reduce the hazard to human life without obtaining concurrence from EPA or the affected states, without following protocols established in this MOU, and without following the guidelines in the RCP and ACPs. If in-situ burning is used in this manner, notification of EPA, USCG, DOC/NOAA, DOI and the affected state(s) shall be made as soon as practicable. Once the risk to human life has subsided, these exceptions no longer apply.

The following protocols assume that risk to human life is not a factor:

3. Prior to any in-situ burn operations, the OSC will review the decision diagram contained in Appendix I.

4. The USCG agrees with EPA, DOI, DOC/NOAA, and the states that if a decision has been made to use in-situ burning under the provisions of this agreement, the OSC will immediately notify EPA, DOI, DOC/NOAA and the states of that decision. This initial notification will include, but is not limited to, the following information to the extent available:

Type and amount of oil discharged
Area affected
The projected area of impact of the oil if not burned
Reasons why in-situ burning has been selected as a mitigation technique
On-scene weather

5. The checklist form in Appendix II shall be completed for all burns and provided to EPA, USCG, DOC/NOAA, DOI, and the affected state(s) in a timely manner for documentation and informational purposes. If the Responsible Party (RP) requests the use of in-situ burning, members of this organization will be responsible for completing the checklist in Appendix II. If the RP is unknown and the request to burn is made by another party, the OSC will be responsible for completing this checklist.

6. Burning will be conducted by trained professionals using recognized techniques and technology. Burning will be conducted in a way that allows for safe and effective control of the burn to the maximum extent feasible, including the ability to rapidly stop the burn if necessary. Containment and control using fire-resistant boom is recognized as the preferred method of burning. All practical efforts to limit the potential for igniting the source or adjacent, uncontained, or uncontrollable slicks will be made.

7. In-situ burning is advised only when the meteorological and sea conditions are operationally favorable for a successful burn. The OSC will give due consideration to the direction of the wind and the possibility of the wind blowing precipitate over population centers or sensitive resources onshore. A safety margin of 45 degrees of arc on either side of predicted wind vectors should be considered for shifts in wind direction (see Figure 2 for Zone "B" requirements). If conditions change to exceed the safety margins during a burn in Zone B the burn will be extinguished.

8. Health and Safety Concerns -

(a) OPERATORS: Assuring workers' health and safety is the responsibility of employers and the OSC who must comply with all Occupational Health and Safety Administration (OSHA) regulations. Prior to any in-situ burn operations, a site safety plan must be prepared.

(b) PUBLIC: Burning should be stopped if it becomes an unacceptable health risk to the general public. If at any time during burning operations exposure limits are observed to exceed federal air quality standards in nearby populated areas, the OSC will require the operations to be immediately cease. The Level of Concern (LOC) for particulates for the general public in Region II is 150 ug/m3 (PM-10) averaged over one hour. Public advisories may be required prior to initiating a burn.

9. In-situ burning will be conducted in accordance with any consultations approved by the U.S. Fish and Wildlife Service and the NOAA National Marine Fisheries Service under Section 7 of the Endangered Species Act. If threatened or endangered species are present in the burn area, then the trustee agency must be consulted prior to initiating burning operations. Measures will be taken to prevent risk to any wildlife, especially endangered or threatened species. Examples of potential protection methods may include moving the location of the burn to an area where listed species are not present, temporary employment of hazing techniques, if effective, and physical removal of listed species individuals under the authority of the trustee agency. If the risk to endangered or threatened species cannot be eliminated or reduced sufficiently, the burn will not be conducted unless a threat to human life exists.

10. The OSC will make every reasonable effort to continuously evaluate the decision to burn, and allow RRT agencies and the affected states the opportunity for comment. Cognizant representatives from trustee agencies, the potentially impacted state(s), and EPA, will have the responsibility and authority to decide when a burn should be discontinued. Those cognizant representatives, who should be identified by their respective agencies prior to commencement of a burn, must have the verbal authority to call for the burn to be discontinued, since production of a written request in the midst of an operational burn would most likely be impractical. The reason and justification for their request, however, should be subsequently documented and submitted to the OSC for the record. Requests to discontinue a burn, when submitted by agencies with trustee authority, will be immediate grounds for discontinuance of burn operations.

11. Monitors representing the USCG, EPA, federal trustee agencies, the affected states, OSHA, and the responsible party will have the opportunity to monitor in-situ burning operations, when feasible:

(a) Monitoring to establish "continue / discontinue" data for input to the OSC will be conducted in accordance with protocols outlined in Appendix III. Unless smoke plumes are predicted to cross over populated or environmentally sensitive areas, an inability to conduct monitoring operations will not be automatic grounds for discontinuing or prohibiting in-situ burn operations. Real-time PM-10 monitoring will be initiated when trajectories indicate potential movement toward populated or environmentally sensitive areas, and will be in place prior to the start of burn operations to gather baseline data.

(b) All burns must incorporate constant visual observations to monitor smoke plume behavior. A trial burn may be conducted to better estimate plume behavior prior to operational burning. The OSC, EPA, DOC/NOAA, DOI, and the affected state(s) should determine under what conditions the burn should be stopped if the plume contacts or threatens to contact the ground in populated or environmentally sensitive areas.

12. Mechanical recovery equipment shall be mobilized on-scene when feasible for backup and complimentary response capability. Provisions should be made for collection of burn residue following the burn(s).

13. If in-situ burning is used, a post incident debriefing will take place within 45 days to gather information concerning its effectiveness and to determine whether any changes to this agreement are necessary. The debriefing will be chaired by the OSC by arranging the time, place, and date of the debrief. The results of the debrief will be included in the OSC report.

AMENDMENTS

This Memorandum of Understanding may be amended in writing in whole or in part as is mutually agreeable to all parties thereto.

Area Committees may submit further defined areas for use/non-use of in-situ burning for consideration and approval by the USCG, EPA, DOC/NOAA, DOI and the states of New York and New Jersey. Approved amendments shall be found in Appendix I of this MOU.

CANCELLATION

This Memorandum of Understanding may be canceled in whole or in part by any party thereto. Cancellation will take place 30 days following delivery of written notification to each of the agencies participating in this Memorandum of Understanding.

Schematic Illustration of Zone B In-Situ Burn Requirements

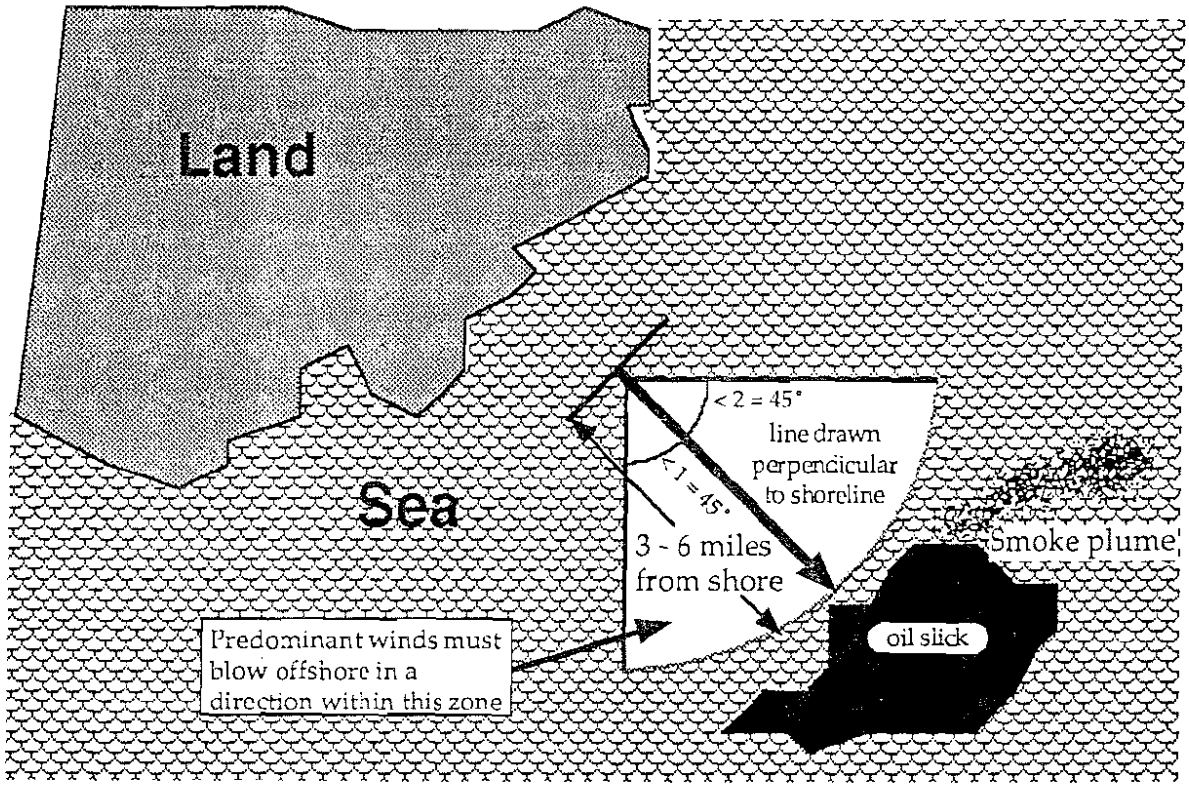

Figure 2

In-Situ Burn Unified Command Decision Verification Checklist

Purpose and Summary:

The following checklist, created with input from the Region II RRT, provides a summary of important information to be considered by the Unified Command, consisting of the federal On-Scene Coordinator (OSC), state On-Scene Coordinator (SOSC), and responsible party representative (RP) when planning for the use of in-situ burning in response to an oil spill in marine waters of Region II. The document is intended to allow Unified Command verification of a decision, rather than an information distribution sheet or an approval form.

Each section of the checklist provides a series of "limiting factors" questions for each of the decision points on the Region II In-Situ Burning Decision Flowchart. Some sections also contain a "worksheet" for important information that may be necessary to answer limiting factor questions; the user is encouraged to attach forms that already contain this information if they are readily available.

Questions in the limiting factors section that are answered with a "Yes/Optimal" support the decision to conduct an in-situ burn. However, spill response involves numerous tradeoffs, and any less-than-ideal conditions that are represented by a "No/Sub-Optimal" answer may be balanced by other benefits of in-situ burning in a given situation. Not every question of the worksheet must be answered. It is acceptable for the Unified Command to make a decision based on incomplete information, provided the information gaps are understood and considered.

In Situ Burn Decision:

Federal On-Scene Coordinator Decision: Approve Signature:_____

State On-Scene Coordinator Decision: _Concur Signature: _____

Responsible Party Decision: _Concur Signature: _____

Under Region II MOU, additional consultation or concurrence is required in Zone C (or Zone B if winds are not from the pre-approved directions).

faxed 4/5/96

United States Department of the Interior

FISH AND WILDLIFE SERVICE
3817 Luker Road
Cortland, New York 13045

April 5, 1996

Mr. Ed Levine
Scientific Support Coordinator
U.S. Department of Commerce
National Oceanic and Atmospheric Administration
Building 110, Box 2
Governors Island, NY 10004-5000

Dear Mr. Levine:

The U.S. Fish and Wildlife Service (Service) has reviewed the draft Biological Assessment (BA) of Effects on Listed Species of Regional Response Team II Memorandum of Understanding (MOU) for Preauthorization of In-Situ Burning of Oil Spills, dated December 4, 1995. The geographic area addressed in the MOU covers four zones located along and offshore from the south shore of Long Island and the coast of New Jersey as described in the draft BA.

Based on our review of the information provided, we concur with the determination that the proposed MOU preauthorizing in-situ burning as an oil spill response technique in designated zones is not likely to adversely affect Federally listed species under our jurisdiction. As described in the draft BA, the proposed MOU provides for further consultation with the Service under specified circumstances prior to conducting in-situ burning. Therefore, except as prescribed in the draft BA and MOU, no further Section 7 consultation under the Endangered Species Act (87 Stat. 884, as amended; 16 U.S.C. 1531 et seq.) is required with the Service. Should the proposed action change, or if additional information on listed or proposed species becomes available, this determination may be reconsidered.

The above comments pertaining to endangered species under our jurisdiction are provided pursuant to the Endangered Species Act.

If you have any questions regarding these comments, please contact Mark Clough at (607) 753-9334.

Sincerely,

Sherry W. Morgan

Boston, MA 02210-2209

Dear Captain Williams:

The Area II Regional Response Team has drafted a Memorandum of Understanding (MOU) for expedited procedures for using in-situ burning as an oil spill countermeasure within marine waters roughly from Montauk, New York to Cape May, New Jersey. Because several species listed as endangered or threatened under the Endangered Species Act (ESA) may occur in the waters described by the MOU, you and the NOAA Scientific Support Coordinator have initiated consultation with the National Marine Fisheries Service (NMFS), pursuant to Section 7 of the ESA, regarding the MOU and potential effects on the listed species. Consultation has included informal talks with NMFS staff, as well as the submission of a biological assessment. Based upon this previous correspondence and the discussion that follows, NMFS concurs that in-situ burning: 1) may mitigate many of the potential adverse effects of spilled oil and 2) is not likely to worsen any of the adverse effects of exposure to the oil and oil fractions. Therefore, NMFS concludes that the MOU and the expedited procedures authorized under the MOU are not likely to adversely affect the ESA-listed species under NMFS jurisdiction.

The following species listed as endangered or threatened under the ESA may occur in the waters described by the MOU:

Species	Listing Status
Blue whale (*Balaenoptera musculus*)	Endangered
Fin whale (*Balaenoptera physalus*)	Endangered
Humpback whale (*Megaptera novaengliae*)	Endangered
Northern right whale (*Eubalaena glacialis*)	Endangered
Sei whale (*Balaenoptera borealis*)	Endangered
Sperm whale (*Physeter macrocephalus*)	Endangered
Green sea turtle (*Chelonia mydas*)	Endangered
Kemp's ridley sea turtle (*Lepidochelys kempii*)	Endangered
Leatherback sea turtle (*Dermochelys coriacea*)	Endangered
Loggerhead sea turtle (*Caretta caretta*)	Threatened
Shortnose sturgeon (*Acipenser brevirostrum*)	Endangered

Also, bottlenose dolphin (*Tursiops truncatus*) and harbor porpoise (*Phocoena phocoena*), which are common in the area, have been proposed for listing under the ESA.

The decision of whether or not to conduct in-situ burning presupposes that oil has been spilled in the marine environment. Noting the statement in the biological assessment that "mechanical removal [of spilled oil] will remain the predominant response tool," NMFS acknowledges that under some conditions collection and removal of oil may not be sufficiently effective or timely to protect marine resources, and responders must rely on innovative countermeasures. In-situ burning can effectively and quickly remove spilled oil from the surface of the water and thereby reduce the potential of listed species directly contacting the oil. Burning would take place only within a fireproof boom, and therefore marine effects are likely to be local. In-situ burning can eliminate most of the volatile fractions of the oil which would be toxic if inhaled by mammals and sea turtles. Most of heat generated by a burn will go up into the atmosphere and only the top few centimeters of the water column will be warmed above the ambient water temperature. Burn residue generally floats and can be retrieved. Listed species may come in contact with residue which is not retrieved. The effects of the contact are unknown; however, since the volume of oil product in the water is so greatly reduced by the burn, the potential for exposure is likewise substantially reduced.

Though this consultation fulfills your responsibilities pursuant to Section 7 of the ESA, the MOU states that spill responders will consult with NMFS should ESA-listed species be observed in the immediate area where a burn will be conducted. NMFS supports that provision (paragraph 9) of the MOU and insists that you contact the agency should ESA-listed species under NMFS jurisdiction be observed. Also, spill responders should be advised that members of the Northeast Marine Mammal Stranding Network are authorized by NMFS to deter, handle, and remove listed species that have become oiled or are at risk of entering the spill and burn area. The enclosed list of contacts for the stranding network may be added to Area Contingency Plans.

In summary, NMFS concurs with the biological assessment's conclusion that the MOU for in-situ burning of spilled oil and the procedures authorized under the MOU are not likely to adversely affect endangered and threatened species under the jurisdiction of NMFS that may occur in the area. Should a need to change the MOU arise or should new information become available that changes the basis for this determination, this consultation should be reinitiated. If you have any questions about this consultation or about the protected species in the region, please contact Daniel Morris or Doug Beach at (508) 281-9328.

Sincerely,

Dr. Andrew A. Rosenberg
Regional Administrator

Annex ZZ

Dispersant Use

Annex ZZ

Use of Dispersants Within Sector Delaware Bay Area of Responsibility

9720 Use of Dispersant within Sector Delaware Bay

[Link to Documentation and Application Form for Dispersant use Section 9724]

The critical scientific issue behind dispersant deployment is whether the environmental effects associated with dispersed oil are preferable to those associated with un-dispersed oil. Dispersing spilled oil does not remove it from the environment and should not preclude the use of other clean-up methods.

Important factors to be considered before reaching a final decision on dispersant use include:

- Is the oil dispersible?
- Are chemical countermeasures necessary and appropriate?
- What are the resources at risk?
  - Where are they located?
  - How will they be affected if chemical countermeasures are used?
  - How will they be affected if chemical countermeasures are not used?
- Are the appropriate dispersants available?
- Is dispersant application equipment available?
- Are weather conditions appropriate for dispersant use?

It is critical to decide whether or not to use dispersants early in the spill response. Dispersants generally need to be applied within 24-hours to be effective. As the oil weathers and the slick spreads, mousse and tarballs form, volatile components evaporate, and dispersant use becomes less effective.

Trial Application

In cases where it is difficult to predict if a dispersant will be effective, it may be advisable to conduct a field trial, prior to requesting approval for a full-scale dispersant operation.

Conditions under which a field trial may be desirable include:

- The oil has weathered and present viscosity and pour point may have become too high to permit efficient dispersion of oil
- The properties of the oil which has been spilled are not known and it is suspected that the oil may be difficult to disperse
- The dispersant which is available has not been used sufficiently or tested adequately to assure that it will disperse the spilled oil effectively
- The spilled oil is likely to impact sensitive resources but such impact is not imminent. That is, sufficient time is available for testing before shoreline impact.

Trial application will only take place on an area of the spill covered by **50 barrels or less** to determine the product's effect on the specific oil under the current set of environmental

and meteorological conditions. Trial application may begin prior to the initial request of the appropriate Regional Response Team (RRT) for operational use of the chemical countermeasures on a greater portion of the spill. Monitoring protocol is waived for trial use applications; however, it must be supervised by a trained observer (i.e. Strike Team or NOAA SSC) and be reported as a qualitative visual observation (pass/fail) and reported to the RRT.

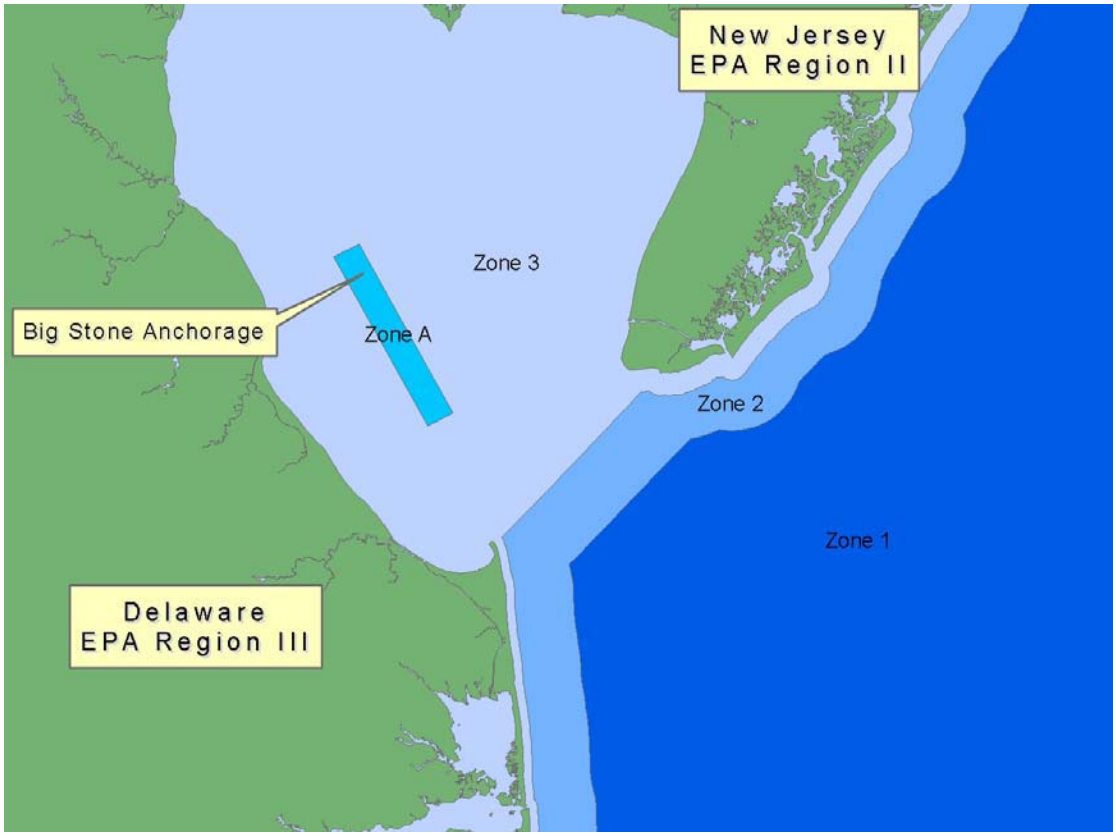
Dispersant Monitoring

The Coast Guard Strike Team should monitor dispersant application operations. The monitoring has two main objectives:

- ❑ To determine the effectiveness of the dispersant
- ❑ To determine the environmental effect of the dispersant.

Dispersant Use Pre-Authorization and Application Zones

Dispersants listed in the NCP Product Schedule may be used in spill response in accordance with the special conditions listed below:



Big Stone Anchorage (Zone A) in the Delaware Bay

Limited Preauthorization

The effects of the circular Delaware Bay current patters in the Big Stone Beach Anchorage toward the channel side of the 15-meter contour are conductive to chemical agent use on spills of **50 barrels or less**.

The use of chemical countermeasures on spills of 50 barrels or less, or 50 barrel or less portions of larger spills, is approved, provided the former is a spill of opportunity and the latter is for trial use only.

The Federal On-scene Coordinator (FOSC) shall notify State and Federal trustees of the decision to deploy dispersants, and prepare and provide a written report detailing the results of the deployment within 60-days of termination of the response.

COTP Sector Delaware Bay Sub-regional Area (Zone 1) - the offshore boundary of the Sector Delaware Bay COTP Zone **more than three miles offshore**, as defined in 33 CFR 3.25(b).

Advanced Preauthorization

The water depth and surrounding topography of this area are suitable for the use of chemical agents. Preauthorization is granted with respect to spills of any size.

Coastal Waters within the COTP Sector Delaware Bay Sub-Regional Area (Zone 2) – Greater than 0.5 miles from shore and water depth greater than 40 feet (12.2 meters)

Concurrence/Consultation Required for Operational Use

Chemical countermeasures may be used in waters that are at least 0.5 nautical miles from any shoreline and where the water depth is greater than 40 feet (12.2 meters)

Before authorizing operational use of dispersants, the FOSC must establish communication with the following for concurrence

- Environmental Protection Agency
- Affected State(s)
- Department of Commerce in Region III
- Department of Interior in Region III

The FOSC may establish a time frame, not less than four hours, in which a non-concurrence position must be communicated.

FOSC must communicate with the following for consultation

- Department of Commerce in Region II
- Department of Interior in Region II

Nearshore Waters within the COTP Sector Delaware Bay Sub-region (Zone 3) – Less than 0.5 miles from shore or water depth less than 40 feet (12.2 meters), beyond the inland waters demarcation line.

Concurrence/Consultation Required for Operational Use

Dispersants are not a primary response tool in this zone, but their use maybe necessary to protect sensitive areas. Before authorizing dispersant use in Zone 3, the FOSC must establish deliberative communication with the following for concurrence

- Environmental Protection Agency
- Affected State(s)
- Department of Commerce in Region III
- Department of Interior in Region III

The FOSC may establish a time frame, not less than four hours, in which a non-concurrence position must be communicated.

FOSC must communicate with the following for consultation

- Department of Commerce in Region II
- Department of Interior in Region II

Notification

If the FOSC decides the use of dispersants is necessary, RRT members representing the EPA, DOI, DOC and affected State(s) will be notified. Notification will include

- Material Safety Data Sheet (MSDS) of the dispersant product chosen
- Date, time and location of the incident
- Type and amount of oil discharged
- Area affected
- The projected area of impact if the oil is not dispersed
- Reasons why mechanical or physical removal of the oil is not feasible, or will not on its own provide the optimal response method
- Dispersant to be used
- On-scene weather, wind and forecasted weather.

The FOSC will consider the advice of the EPA, DOI, DOC and affected State(s) and other information sources, which may be available. The use of dispersants will be discontinued if so requested by the RRT representative of the EPA, affected State(s), DOI or DOC. Such a request may be verbal followed by written documentation.

Only the FOSC can authorize the use of dispersants and it is the FOSC's responsibility to provide the trustees with all required documentation information.

Aerial Observation of Dispersants

Observing dispersant operations:

- Keep the sun behind you, holding the aircraft at an altitude of 500 to 1,000 feet (150 to 300 meters)
- Observe the slick at about a 30-degree angle
- For observers to achieve consensus use standard reporting criteria and be sure that **all observers have been trained to use a common set of guidelines**. Use NOAA's [Checklist for Dispersant Application Observation Section 9742] for reporting standards
- Report the presence of marine mammals, turtles and birds in the area of dispersant application. These species can be adversely affected by contact with dispersants
- The observer will not make operational decisions (where to apply, how much, etc.), these decisions are made by operational units

Identifying Dispersed Oil

- Suspended solids or algal blooms, can resemble dispersed oil.
- The appearance of oil slicks and subsurface plumes is affected by factors such as oil characteristics, time of day (different sun angles), weather, sea state, and the rate at which oil disperses.
- Once dispersant has been applied to a slick, color changes may occur in emulsions (mousse) , produced as the demulsifying action of the dispersant reduces the water content and viscosity of the emulsion. Demulsification also can produce changes in the shape and size of a slick: as demulsification pushes water out, the slick may appear to shrink in area.

Telling When Dispersion Has Occurred

- A visible subsurface plume of dispersed oil indicates that an application of dispersant is working.
- When no plume is visible in the water column, it is difficult to determine whether the dispersant is working, but does not definitively mean that the dispersant is not having an effect.
- Subsurface plumes of dispersed oil typically have a cloudy appearance, and can range in color from brown to white. Some are not visible. When dispersant is working, oil remaining on the water surface also may change color.

- In some cases, you may not be able to see a subsurface plume even when one is present. When the water is turbid, you may not be able to see a plume. Sometimes, remaining surface oil and sheen can mask oil dispersing under the slick, making it hard for you to see the plume.
- A subsurface plume may not form instantaneously once dispersant has been applied to a slick. In some cases, such as when oil is emulsified, it can take several hours for a plume to form. In other cases, a visible plume may not form (you then may wish to use sampling to learn whether dispersion has occurred).
- A change in the appearance of a treated slick, compared with an untreated slick, might indicate that the dispersant is working. A difference in appearance alone is not enough of an indication to be sure that the dispersant is having an effect.
- A clear stretch of water left in the wake of a dispersant application vessel can appear to represent successful dispersion of oil. Areas of clear water can be created as the vessel wave breaks a path through the oil, either physically parting the oil or mechanically dispersing it. Mechanically dispersed oil will recoalesce and float to the surface.
- When initially applied, dispersants sometimes have a herding effect on oil, making a slick appear to be shrinking when, in fact, the dispersant is "pushing" the oil together. This effect results from the surfactant action of dispersants, which exerts a horizontal spreading force on thin oil films. This effect can cause parts of an oil slick to seem to disappear from the sea surface for a short time.

Estimating Slick Thickness, Application Dose, and Dispersant Efficiency

- Dispersed oil plumes are often highly irregular in shape and variable in oil thickness. It can be difficult to accurately estimate dispersant efficiency.
- The appropriate dispersant application dose depends on the thickness of the oil in a slick.
- Slicks are generally not uniform in thickness, and it's not always possible to distinguish among thicker and thinner parts of the same slick.
- Under dosing a slick can cause a dispersant application to be unsuccessful
- Overdosing the slick adds to the expense of treatment and does little extra
- Because over- and under dosing lead to variations in the effectiveness of application, note these variations when observed them.

Documentation Form For Dispersant Use

9724 DOCUMENTATION/APPLICATION FORM FOR DISPERSANT USE

Name of spill incident_____

Responsible Party (if known) _____

Date and time of spill incident _____

I OIL TYPE

1. Spilled product name (if known):_____
2. Viscosity: _____
3. API Gravity:_____
4. Pour Point:_____
5. % Evaporation in 24 hours_____

   48 hours_____
6. Did oil emulsify within the operational period?_____

**Any information from visual overflights of the slick, including estimations of slick thickness, be included here. All additional availability information pertaining to physical of spilled oil should be included here.

II ENVIRONMENTAL CONDITIONS

1. Wind speed_____
2. Wind direction _____
3. Visibility_____
4. Ceiling_____

III DESCRIPTION OF SPILL INCIDENT AND SPILL SITE

Note all relevant details concerning the spill incident and the incident site. Be sure to note (list not inclusive):

- Circumstances (fire, collision, grounding, etc.)
- Time and Date
- Location
  - Including nearest major port
- Type of oil spilled
- Amount of oil spilled
  - Slick thickness
  - Area covered by the oil slick
- Total potential of the spill
- Type of release (intermittent, instantaneous, continuous, etc.)
- Stability of the vessel
- Amount of cargo remaining aboard the vessel
- Sensitive environmental conditions in the vicinity of the vessel
  - Shoreline habitat type in predicted areas of impact
  - Resources at Risk
  - Endangered/threatened species
  - Critical habitats for the above species
  - Marine animals
  - Waterfowl and other bird use
  - Shellfish
  - Finfish
  - Commercial use (aquaculture, water intakes, etc.)
  - Public use area (parks, beaches, marinas, etc.)
  - Areas of historical significance

IV DESCRIPTION OF AREA OVER WHICH DISPERSANTS ARE APPLIED

1. Distance from shoreline: _____
2. Depth of water:_____
3. Jurisdiction (i.e. federal or state):_____
4. Special management zone area _____

_____

5. Safety zone established in operational area:_____

_____

V. AVAILABILITY OF PERSONNEL AND EQUIPMENT

1. Availability of application and spotter aircraft_____
   Source:_____
   Point of contact:_____
   Type: _____
   Travel time to spill:_____
2. Type of aircraft used:_____
3. Aircraft's dispersant load capability:_____
4. Availability of qualified personnel:_____
   Source:_____
   Point of contact:_____
   Travel time to spill:_____
5. Time required for delivery to the aircraft staging area:_____

VI. INFORMATION ON DISPERSANT PRODUCT

1. Name of dispersant:_____
2. Manucturer:_____
3. Amount available:_____
4. Source:_____

** A Material Safety Data Sheet of the product should be attached here.

VII IMPLEMENTATION OF RECOMMENDED MONITORIING PROTOCOLS

1. Was the Atlantic Strike Team's Special Response Operations Program Team deployed?

_____

**A full report documenting the activities and results of any monitoring activities should be attached here.

VIII. SAFETY

1. For safe aerial operations, wind speed should be less than 25 knots, ceiling should be greater than or equal to 1000 feet and dispersant operations should take place during daylight hours

2. Ensure the Site Safety Plan includes the hazards associated with deployment of dispersants.

Guidance For

Aerial Observation of Spills

9740 Guidance for Aerial Observation of an Oil Spill

Aerial overflights of an oil spill provide the Incident Commander/Unified Command with critical information on which to develop initial incident objectives and subsequent objectives. To maximize the effectiveness of aerial observations trained observers or persons with experience evaluating the extent of an oil spill are recommended.

Prior to takeoff the observers should:

- Get a situational brief from the Situation Unit Leader
- Refer to the Oil Spill Observation Checklist for information to be gathered [Link to the Checklist Section 9741]
- Consult the Open-water Oil Identification Job Aid for Aerial Observation from NOAA's Office of Response and Restoration Branch [Link to Job Aid]

Actions once observations begin:

- Record observations
- Ensure that on-scene weather is recorded. To include:
  - Visibility
  - Surface wind speed and direction
  - The pilot can best estimate the surface wind speed and direction
  - Using the Beaufort Scale, an observer can estimate the wind speed from the sea state
  - Current direction can be estimated by comparing the water movement in relation to a stationary object such as a moored buoy, navigation light or, by using kelp or sea grass beds

Aerial Oil Spill

Observation Checklist

9741 Oil Spill Observation Checklist

Record your observations of spilled oil either in a notebook or directly on a chart of the area under observation. Here is a checklist for organizing your observations.

General Information

___ Date

___ Time

___ Case name

___ Observers' names

___ Observers' affiliations

___ Location of oil's source (if known)

___ Stage of tide (flood, ebb, slack)

___ On-scene weather (wind, sea state, visibility)

___ Platform (helicopter, fixed-wing aircraft, boat)

___ Flight path/track line

___ Altitude where observations taken

___ Areas not observed (e.g., foggy locations, restricted air spaces, shallow water areas)

Note: When following a flight path or track line, travel beyond known impacted areas to check for oil beyond these areas and to minimize the number of observations made while facing into the sun.

Note: Include the name and phone number of the person making the observations.

Oil Observations

___ Slick location(s)

___ Slick dimension(s)

___ Orientation of slick(s)

___ Distribution of oil (e.g., as windrows, streamers, pancakes, or patches)

___ Color and appearance (e.g., rainbow, dull or silver sheen, black, or brown in color, or mousse)

___ Percent coverage (see Percentage Coverage Chart)

___ Is oil recoverable (Y/N)? (examples of recoverable oil types include black oil, mousse, and heavy dull- or dark-colored sheens)

Note: Clearly describe the locations where oil is observed, as well as the areas where no oil has been seen.

Other Observations
Response Operations...

___ Skimmer deployment (general locations where skimmers are working. Are they working in the heaviest concentrations of oil?)

___ Boom deployment (general locations of boom(s). Does the boom contain oil? Is oil entraining under the boom?)

___ Source of oil (describe the status of the source. Is oil still being released?)

Environmental Observations...

___ Locations of convergence lines, rip tides, and sediment plumes

___ Locations of kelp beds, sea grass beds, and other features that could be mistaken for oil

___ Wildlife present in area (locations and approximate numbers of birds and marine mammals)

Revised: July 17, 2001
Office of Response and Restoration, National Ocean Service, National Oceanic and Atmospheric Administration

Checklist for

Dispersant Application Observation

9742 Checklist for Dispersant Application Observation

Names of observers (agency): _____

Platform: _____

Date of Application: ___/___/___

Time of application commencement/completion: _____

Weather conditions (air temperature, wind speed, direction): _____

_____

_____

Tide and current: _____

_____

Water temperature, depth, and sea state: _____

_____

Visibility: _____

Altitude (Observation and application platforms): _____

Application method (aerial/vessel) and rate: _____

_____

Type of oil: _____

Oil properties (specific gravity, viscosity, pour point, etc.): _____

_____

Name of dispersant: _____

Location/distance from shore/identified sensitive areas: _____

_____

Surface area of slick: _____

Operational constraints imposed by agencies: _____

_____

_____

Percent of slick treated: _____

Visual appearance of application: _____

_____

Re-coalescence (reappearance of oil): _____

Presence of wildlife (and any impacts, e.g., fish kill): _____

_____

Lessons learned: _____

Aerial

Dispersant Application

Companies

9746 Aerial Dispersant Application (Aircraft and Helicopter)

Airborne Support, Inc. (ASI)
3626 Thunderbird Road
Houma, LA 70363
Tel: (985) 851-6391
Fax: (985) 851-639

Resources:

- 2-Douglas DC-3
- Douglas DC-4
- Turbo-Commander

ASI keeps a reserve of over 50,000 Gallons of Dispersant on site.
Type employed:
Exxon-Nalco Corexit 9527 and Corexit 9500

Response time to Sector Delaware Bay:

- Approximately 10 hours to be on-scene, using Georgetown Airport, Delaware as the landing zone.
- Time assumes a full fuel load at take off and full load of dispersant and weather conditions

United States Air Force Reserve 910th Airlift Wing

Youngstown Air Reserve Station
3976 King Graves Rd., Unit 12
Vienna, Ohio 44473-5912

Resources:

- Four C-130H aircraft
- Equipped with **six** Modular Aerial Spray Systems (MASS)
- Each MASS has a 2,000 gallon capacity
- Flow rate are set at 232 gallons per minute.
- Aircraft flies at 200 knots Ground Speed at about 100 feet
- Covers a swath width of 100 feet for an average application rate of flow rate of 5 gallons/acre (variable 3-15 gallons/acre).
- Total spray-on time for 2,000 gallons lasts about 8 minutes and 30 seconds.

Response time to Sector Delaware Bay

- Worst – case scenario: 48 hours to take off (arrival in 50 hours
- Best – case scenario: 6 hours to take off (arrival in 8 hours)
- Flight time Youngstown, OH to Georgetown, DE approx. 2 hours depending upon WX, payload, etc.

To request 910th Airlift Wing's Assistance

- Contact 910th Airlift Wing: Capt Mark Breidenbaugh, 330-609-1965 or Maj Jeff Shaffer 330-609-1652 (after hours Command Post 330-609-1315) and provide details of spill (location amount, etc.)
- The 910th will provide unit with any specifics that are needed to make the official request for assistance
- Contact the HQ Air Force Air & Space Operations, Directorate of Operations, Training, Air Force National Security Emergency Preparedness (AFNSEP), Fort McPherson, GA
    - Telephone (800) 366 – 0051 Fax (404) 464 – 4282 General information e-mail: afnsep@afnsep.af.mil
- Provide AFNSEP with your request and required information provided by the 910th
- Contact HQ Air Force Reserve Command, Branch of Current Operations, Division of the Directorate of Operations (AFRC/DOOM) with request for assistance and related information
- Inform DOOM that the Coast Guard has contacted ANFSEP
    - SMSGT Mike Flores mike.flores@afrc.af.mil

Gettysburg, Pennsylvania 17325
PH: 717-337-1370 or 1-800-937-4424
FAX: 717-337-1527

Resources:

- Twelve helicopters
- Based in Gettysburg, Pennsylvania
- Hangar in Delaware

NOTE: Investigating aerial dispersant capability and certification for flying offshore missions.

RRT 3

Dispersant Employment Evaluation Form (DEEP)

1. INTRODUCTION AND PURPOSE

The Region III Regional Response Team (RRT) is guided by the Regional Contingency Plan (RCP), which strives to coordinate and integrate response to protect the environment from the damaging effects of oil pollution. The most effective response capability must include a wide array of oil spill containment and cleanup strategies and the personnel and equipment to implement those strategies successfully. The use of chemical dispersants as one potential response tool has been and continues to be a controversial topic. However controversial, the Region III RRT has accepted its responsibility to evaluate the existing knowledge about chemical dispersants in order to formulate an informed policy toward their potential use.

The purpose of the Dispersant Employment Evaluation Plan (DEEP) is to succinctly present the RRT's policy on the potential use of chemical dispersants and provide technical and procedural guidance when a decision on dispersant use is necessary. The DEEP is intended to be a guideline that assists decision makers in their evaluation of the complex and often difficult considerations of dispersant use. Another important aspect of the DEEP is the recognition that as our regional knowledge and experience associated with dispersants changes, the DEEP should be revised to reflect those changes.

The DEEP addresses considerations for dispersant use in marine and estuarine environments only. The potential use of dispersants in freshwater environments should be evaluated as a separate effort for reasons provided in Section 10 of this document.

Federal Region III Regional Response Team's Dispersant Employment Evaluation Plan (DEEP) May 1991

(1DEEPmain)

2. POLICY ON DISPERSANTS

A. RRT Policy

It is the policy of the Region III RRT that it is **preferable** to attempt to remove spilled oil from the environment rather than distribute it throughout the water column. Therefore, the potential use of dispersants in this region will be restricted as follows:

1. Offshore Marine Situations - dispersants may be considered as a response tool in offshore marine situations where significant diffusion is predicted to occur before the dispersed oil reaches areas of less than 40 feet of water. In these situations, the dispersant will not be the only response tool, but strategically employed in those areas where physical containment could not occur in time to protect a sensitive area of concern.

2. Nearshore and Estuarine Situations - in nearshore and estuarine situations, the use of dispersants will be reserved for those situations of **extreme risk*** such as: a) where physical containment could not be effected and dispersants would reduce an imminent threat to an important species or distinct population of fish, wildlife or other biota; or b) to reduce catastrophic economic impacts.

Where any of the above conditions exist, the OSC will consult the concurrence network as described in Section 4 of this document. In all cases of dispersant use, a consistent, logical program of monitoring dispersant effectiveness and effects is required. Monitoring requirements are discussed in Section 9 of this document.

* Where hazards to human life exist, the regulations in subpart J of the NCP apply and the **OSC may authorize dispersant use without regional concurrence network approval.**

B. Summaries of State Policies

The Region III RCP requires that the State(s) with jurisdiction over the affected waters must concur with proposals to use dispersants. The summaries of the dispersant use policies for the States in our region will be included as APPENDICES when made available by the states. A list of these appendices will be noted in this section in future updates of this document.

STATE APPENDIX #

1.
2.

NOTE: STATES MAY REQUIRE CONDITIONAL APPROVAL.

C. Policy Revisions

This policy will become effective upon promulgation by the RRT and it will be reviewed annually, or as necessary, for appropriate changes and updates.

NOTE: On August 1, 1990 - a proposal to incorporate the DEEP into the RCP was presented by the Workgroup and unanimously accepted by the RRT.

3. OPTIMAL SITUATIONS FOR USE

This information is intended to identify those situations where, if mechanical removal were infeasible and the conditions listed below were present, dispersant use probably would be one of the appropriate methods of environmental protection.

Assumptions:

- dispersants are not effective on all types of oil, and even those which are amenable when spilled become more resistant to dispersant treatment in about 24 hours
- the logistics of mounting a major dispersant operation are very complicated and require constant supervision and evaluation
- dispersants can be effective in mitigating environmental damage by reducing heavy oiling of shorelines and certain living resources
- dispersants do not remove the oil but redistribute it into the water column as fine droplets which can be readily diluted
- dispersants are not the preferred countermeasure strategy because they redistribute, not remove, oil from the environment; and because the long-term effects of the dispersant and dispersed oil on marine organisms are unclear and difficult to predict
- in common with all techniques, dispersants are not likely to be 100% effective in preventing shoreline impacts, but may be strategically employed to protect specific areas
- dispersants are one of many countermeasures strategies available to OSCs and they need to be considered along with other strategies, e.g., booms, skimmers, and shoreline cleanup, to optimally mitigate environmental damage

Optimal Conditions

If all or nearly all of these conditions exist, it is possible that dispersant use would be one of the best methods available to the OSC to protect the environment and mitigate damage.

1. offshore/coastal spill from a vessel
2. continuous spill/slow leak
3. oil with a viscosity of < 2,000 centistokes at ambient conditions (= med. fuel oil @ 50-68 degrees F or 10-20 degrees C) provided a rapid response can be implemented
4. spill where water temperature exceeds pour point of oil
5. sea state is about 2 (4' - 6'), that is, sufficiently high to enhance mixing the dispersants, sufficient depth and movement of water to ensure rapid dilution of dispersed oil
6. the likely onshore impacts include extensive marsh areas, wildlife refuges and/or other sensitive areas
7. the likely offshore/nearshore impacts include diving birds and/or other significant populations of other waterfowl, endangered species or other sensitive biota
8. the impacts of dispersed oil in the water column are likely to be short-term and unlikely to affect significant marine resources or endangered species
9. the spill could not be physically controlled in time to prevent significant onshore impacts
10. the dispersant operation can be effected within a few hours of the release (logistics issue - the appropriate type and quantity of dispersant, and suitable method of application can be obtained within the "window" of opportunity)

Federal Region III Regional Response Team's Dispersant Employment Evaluation Plan (DEEP) May 1991.

(3OPTIMALmain)

4. USE DECISION GUIDANCE

A. Minimum Requirements Checklist to Support a Decision to Use Dispersants

This checklist is designed to assist decision makers when a proposal to use dispersants is made. Unless all of these requirements are satisfied, a decision to apply dispersants could be questioned. As indicated by the numerous references below, this checklist must be used in conjunction with other advice and guidance in the DEEP.

1. ____The spilled oil is compositionally and environmentally suited to dispersal, i.e. neither too viscous nor too volatile, water temperature is above the pour point, oil not too weathered. (See Section 7 for guidance)
2. ____The mixing action of the water body is sufficient to diffuse the dispersed oil. (Consult SSC)
3. ____An on-scene field test, which has been approved by the OSC with RRT concurrence, verified that the oil can be dispersed by the available dispersant. This can be accomplished through an actual trial application, which has been approved by the OSC with RRT concurrence, or by using a test kit. (See Section 7 for guidance)
4. ____Efforts to physically contain or remove the spilled oil will not sufficiently protect the primary resources of concern. (Use trajectory information and Section 5)
5. ____The primary resources for protection would be more adversely affected by undispersed oil rather than a mixture of dispersed oil and undispersed oil. (See Sections 5 and 6 for guidance)
6. ____The appropriate dispersant and application equipment can be mobilized efficiently so that the oil could be treated within approximately 24 hours of its exposure to weathering. (See Section 7 for guidance)
7. ____A monitoring plan will be implemented to collect information on dispersant effectiveness and effects. (See Section 9 for guidance)
8. ____The RCP concurrence procedure has been followed and the required approvals from responsible State and Federal authorities have been received. In Region III, concurrence is required from the affected State(s), DOI, DOC, and EPA.

NOTE: A STREAMLINED DISPERSANTS CHECKLIST (previously ANNEX XI of the Region III Regional Contingency Plan) is presented in the DEEP as APPENDIX 1 (5 pages) at the end of this document.

B. Decision Tree

The Decision Tree is a popular method of presenting the broad questions and answers involved in a dispersant use decision. The Decision Tree is not designed to be used in isolation, but instead must be used in conjunction with the other guidance and advisory information in the DEEP.

visual of decision tree in DEEP goes here

* Where hazards to human life exist, subpart J of the NCP allows the OSC to authorize dispersant use without concurrence network approval.

Federal Region III Regional Response Team's Dispersant Employment Evaluation Plan (DEEP) May 1991.

(4DECISIONmain)

6. REGIONAL LIST

These lists are based on the recognized resources of concern in our region and our current knowledge of dispersant effects and effectiveness. It is assumed that dispersants would reduce the quantity of surface oil but not eliminate it entirely. The judgments on reducing adverse impacts are general because of the many incident specific factors that cannot be evaluated in advance. Discussions among the natural resource specialists will be necessary to reach a determination on which resources will be at risk during a given dispersant use decision.

Considerations for Use of Dispersants in RRT Region III and major resources of regional concern are presented in the following tables:

(6BTABLEmain)

7. DISPERSABILITIES PRODUCTS

One crucial factor in every dispersant use decision process is the dispersability of the petroleum product spilled. If the chemical and physical characteristics of the product make dispersant use ineffective or unnecessary, the decision process is quickly concluded. However, there is a large number of petroleum products, primarily crude oils, that can be dispersable under certain environmental conditions. The task of the response community is to rapidly determine if the spilled product is dispersable under the specific environmental conditions actually present at the spill location.

The information provided in this section is designated to speed the response community's evaluation of whether or not the spilled product is dispersable. It is NOT designed to provide a yes or no answer on whether or not a dispersant should be applied. This dispersability information must be combined with results of a field test and site specific environmental condition information before concluding that the spilled product is truly dispersable. The field test may be accomplished by using a field test kit or through a trial application on the spill itself (which has been approved by the OSC with RRT concurrence). Test kits may be commercially manufactured types or "homemade" versions as long as accepted testing procedures are carefully followed.

The dispersability factor definitions were taken from the American Petroleum Institute publication "U.S. Crude and Products Import - 1985" as were the dispersability factors for the finished products. The list of crude oils was developed by the DELBAY Cooperative and is considered representative of the many crude oils transported and stored in our region. If the spilled product in question is not listed, the product's API Gravity and pour point can be used to determine the product's dispersability using Table 7 - 7. (See page 24.)

NOTE: The following six tables of Dispersability Factors are arrranged in the order of NEED to be acted upon the fastest i.e., 3L, 3H, 2H, 2L, 4, 1.

Table 7-7 is a summary table of the previous 6 tables.

Federal Region III Regional Response Team's Dispersant Employment Evaluation Plan (DEEP) May 1991.

(7ABILITYmain)

8. SOURCES OF DISPERSANTS

8. AVAILABLE SOURCES OF DISPERSANTS AND APPLICATION EQUIPMENT

A crucial factor in every dispersant use decision is the ability to deliver the selected dispersant product to the spill site quickly and then properly apply the product to achieve effective dispersal. The information provided in Appendices 2A and 2B is designed to assist the response community once a decision has been made to employ a dispersant as a response measure.

The information provided was assembled by the DELBAY Cooperative through their survey of response resources. The product and organization names are provided to assist response efforts and use of these names does not constitute RRT endorsement of products or services.

APPENDIX 2-B

B. Application Equipment

1. Aircraft

The following three companies have a known dispersant spraying capability. Note that only one

company is in the immediate area (Cordoba). Their involvement, interest, and capability grows out of the efforts of the New York Cooperative, Clean Harbors, to provide an aerial spraying capability. The other two companies each operate a fleet of large fixed wing aircraft and have extensive dispersant spraying experience. They are prepared to respond throughout the U.S. and abroad.

Company Location Phone

Cordoba Helicopter Hightstown, NJ (609) 448-0031

Bigert Aviation Chandler, AZ (602) 821-2400

One ADDS PACK and one 2,500 gallon system installed in a DC-4 aircraft.

Conair Aviation Abbotsford, BC (609) 853-1171

Ten DC-6 fitted for 3,000 U.S. gallon system, capable of delivering up to 20 gallons/acre. Fifteen 360 U.S. gallon systems for Bell 205 Helicopters and six 180 U.S. gallon systems for Bell 206 Helicopters. NOTE: Per phone conversation on 1/29/91 with Rod Boles of Conair, the two Fokker F-27 (not F-17) systems fitted for 7,000 U.S. gallons, were sold to France.

The only boat mounted spraying systems identified on the East Cost, north of Florida were those owned by the Delaware Bay and River Cooperative (one complete self contained system) and the Clean Harbors Cooperative in New York (one complete self contained system).

Similar system are held by other industry cooperatives at more distant locations. Clean Harbors and the Delaware Bay and River Cooperative have mutual assist agreements which allow for quick access to each others equipment.

9. CRITERIA FOR MONITORING

9. CRITERIA FOR MONITORING DISPERSANT USE

Dispersant applications in Region III will be monitored as a general practice. The OSC is responsible for designating monitors. The Atlantic Strike Team will serve as monitors as available. There are two levels of criteria suggested: general and incident specific.

Dispersant use needs to be monitored for two reasons. First, the OSC needs to know how well an application worked to help decide whether to continue and if so, to refine future applications. Second, in the long-run, there is a great need for more field data on dispersants; each use constitutes an opportunity that should not be lost.

NOTE: The Region III MONITORING SUBGROUP of the DISPERSANTS WORKGROUP will be developing additional MONITORING REQUIREMENTS that will be incorporated into the DEEP as an APPENDIX when available.

GENERAL REQUIREMENTS

Records

1. Dispersant brand
2. Equipment and methods used in application
3. Dilution of dispersant prior to application, if any
4. Rate of application (gallons per acre, dispersant to oil ratio)
5. Times and area of application
6. Tracks of vessels or aircraft during application
7. Wind and wave conditions during application

Effectiveness

Visual and photographic documentation by qualified observers of:

1. Oil before and after dispersant application
2. Resurfacing of dispersed oil

Environmental Impacts

Visual and photographic surveys by qualified observers of:

1. The extent of shoreline impact by dispersed and undispersed oil
2. Mortality or abnormal behavior by fish, birds, or mammals

INCIDENT SPECIFIC REQUIREMENTS

Based upon variables such as the location of the spill relative to sensitive resources, the time period during which dispersants would be applied, and other factors, more specific monitoring requirements may be applied. The following are types of incident specific concerns for which detailed monitoring may be necessary.

Records

1. Dispersant brand
2. Equipment and methods used in application
3. Dilution of dispersant prior to application, if any
4. Rate of application (gallons per acre, dispersant to oil ratio)
5. Times and area of application
6. Tracks of vessels or aircraft during application
7. Wind and wave conditions during application

Effectiveness

Sampling of the water beneath the oil slick and the oil and dispersant combination to determine the level of petroleum hydrocarbons in the water. This sampling could include "in-situ" measurements or sample collection for later analysis.

Environmental Impacts

1. Comparison of shoreline areas impacted by oil and oil and dispersant mixtures
2. Analysis of oil concentrations in sediments under dispersed oil
3. Investigation of water column organisms for signs of adverse impact due to dispersed oil
4. Collection and analysis of birds and other wildlife (and perhaps vegetation) affected by dispersants or dispersant and oil mixtures

Federal Region III Regional Response Team's Dispersant Employment Evaluation Plan (DEEP) May 1991.

(9CRITERIAmain)

10. POLICY DEVELOPMENT

10. POLICY DEVELOPMENT AND JUSTIFICATION

The highly industrialized character of our region, and the frequent transport, transfer and storage of petroleum products into the ports of Philadelphia, Baltimore and Norfolk, make the occurrence of oil spills inevitable. The question, therefore, is not "what if" but rather "where, how much and what kind" of oil is spilled. In 1987, the RRT identified the issue of dispersants as one deserving special attention in our region. Shortly thereafter, the Dispersants Workgroup was established to study the body of knowledge on dispersants with the intention of developing the appropriate guidance that the RRT and OSCs need to make and support a decision to employ or not employ dispersants. The justification for either decision took on added importance following the court decision on the French government's response to the Amoco Cadiz oil spill. In that 1988 decision, the court ruled that the French decision to ban the use of dispersants in waters shallower than 50 meters (164 feet), was "Without scientific justification" and "seriously interfered with the success of the dispersant method." This kind of precedent reminded us that the decision on dispersant use must be based upon sound reasoning and the best information available.

The Dispersants Workgroup initiated its efforts by reviewing the various existing regional approaches to dispersant use issues and outlining a strategy for our particular position on dispersant use. In general terms, the Workgroup listed a number of tasks to better identify the effects and effectiveness of dispersants prior to preparing appropriate guidance materials to be adopted as part of the RCP. The Workgroup also decided to focus its attention on the possible use of dispersants in marine and estuarine environments only. The use of dispersants in freshwater should also be investigated as there are significant differences between their use in those environments compared to freshwater environments. For example, in freshwater there are added concerns for impacts to drinking water, normally there is less volume of water for mixing, and there is a much smaller body of data available for decision making.

The Dispersants Workgroup reviewed a great deal of information on sensitive environmental resources, petroleum products routinely handled in our region, historical oil spill data, dispersants types and toxicities, and application techniques. The result of these reviews was the preparation of the Dispersant Employment Evaluation Plan (DEEP) which is composed of a collection of advisory and reference materials to be incorporated into the RCP. These materials serve to educate responders about dispersant use considerations and serve as guidelines to technical specialists who would be consulted during an actual spill response. As part of the DEEP, the Workgroup decided to include a statement of regional policy that would put the question of dispersant use into the broader context of how our region chooses to respond to oil spills.

It is acknowledged that first and foremost, our regional policy must assist the OSC to make decisions efficiently. In addition, this policy should be revised as necessary to recognize new, useful information on dispersant effects and effectiveness gained from research or experience from actual uses on oil spills. Through such an evolution, the regional policy should help the response community make the most effective use of dispersants as one possible oil spill response tool. It is presumed that any dispersant use would be in combination with other response methods, especially the physical containment and removal of the spilled oil.

It is the policy of the RRT that it is preferable to attempt to remove spilled oil from the water body rather than distribute it throughout the water column. The RRT considers that a decision to use dispersants is acceptance of a tradeoff in environmental impacts. In general terms, dispersants would reduce the amount of oil on the surface while increasing the amount of oil in the water column as well as adding dispersant to the water column. It is important to recognize that even under small-scale, controlled conditions, dispersants are nowhere near 100 percent effective. In the field studies presented in the National Academy of Sciences report, the average effectiveness of dispersants was 30 percent

with a range of 0 to 100 percent. The RRT acknowledges that there is no single oil spill response measure that is 100 percent effective. That is why employment of a variety of cleanup methods is usually necessary to achieve maximum success.

When dispersants are used, there will be both surface oil and dispersed oil impacts on the environment. The specific impact tradeoffs can only be identified if we have detailed field and laboratory data to quantify the effects of dispersed oil and undispersed oil on those organisms or habitats within our region. This need for detailed, region specific data is a significant factor in this Region's decision to restrict dispersant use at this time.

Based on the efforts of the Dispersants Workgroup, the RRT concludes that there is insufficient toxicity information about dispersant effects as related to our region's characteristics. In the absence of this information, the RRT does not believe that widespread dispersant use can be justified. The major points of concern regarding this information gap are presented below.

- The available toxicity information is based upon laboratory, not field, measurements;
- much of the toxicity testing on fish and shellfish has been done with crude oils rather than the refined products frequently shipped in our region;
- toxicity is usually reported as lethal concentrations or doses and there is much less information on the sublethal effects of dispersants; and,
- there is insufficient toxicity information for the species of most concern in our region.

Furthermore, after reviewing the description of how dispersants physically function in the environment, the Workgroup is concerned about the diffusion and mixing action (so vital to dispersant performance and dilution) characteristics of Region III's estuarine environments such as the Chesapeake and Delaware Bays. These areas comprise a significant portion of sensitive resources where, historically, most of the region's oil spills have occurred.

The RCP requires, in Subpart A Section II.(A), the effective and immediate action by government agencies to minimize damages from oil discharges. Without the better information on impacts of dispersed oil, and considering the diffusion and mixing action questions, it would not be prudent to recommend widespread use of dispersants in our region. In addition, we need sufficient margin of protection for those special situations where restricted dispersant use is recommended.

The Dispersants Workgroup identified several situations where dispersants might be used while compromising our policy of preferring oil removal to distribution into the water column. In recommending offshore use, the rationale is that there would be sufficient water depth and mixing action to reduce dispersed oil levels below sublethal concentrations quickly before it reached nearshore, sensitive resources. To ensure a sufficient margin of protection, offshore use should only be recommended where significant diffusion would occur before the dispersed oil reaches areas of less than 40 feet of water. The 40 foot depth is selected because studies show that sublethal concentrations do occur at depths of 10 meters (33 feet) and researchers recommend at least 10 meters of depth when using dispersants over sensitive resources such as coral reefs and sea grasses. While recognizing that our region does not have coral reefs, we believe that the region's shellfish resources deserve similar protection.

One potential nearshore, extreme risk situation for dispersant use would be a situation where a sensitive plant or animal population could be irreversibly harmed by large quantities of surface oil. A possible example would be surface oil impacts on the horseshoe crab eggs and shorebirds dependent on them in Delaware Bay during the peak shorebird migration period. At this critical time, significant portions of

the world's population of some shorebirds species may be exposed to the spilled oil, both through ingestion of oiled crab eggs and physical contact with the oil. If physical containment or mechanical removal was not possible or sufficiently effective, careful dispersant use might reduce the magnitude of the adverse impacts.

Federal Region III Regional Response Team's Dispersant Employment Evaluation Plan (DEEP) May 1991.

(10POLICYmain)

11. SOURCES OF INFORMATION

11. SOURCES OF INFORMATION ON DISPERSANTS

Throughout the first two years [1988, 1989] of the Dispersant Workgroup's efforts in developing the DEEP, the members utilized the available literature and other information to take advantage of previous work on dispersants. Listed below are specific sources that were consulted which provided valuable information.

American Petroleum Institute, 1985, U.S. Crude and Product Import

Gundlach, Erich R., 1989 Amoco Cadiz Litigation: Summary of the1988 Court Decision

National Research Council, 1989, Using Oil Spill Dispersants on the Sea

Regional Response Teams, Region I - IV, VI, IX, and Alaska, Regional Contingency Plans

U.S. EPA, 1989, National Contingency Plan Product Schedule

Federal Region III Regional Response Team's Dispersant Employment Evaluation Plan (DEEP) May 1991.

(10POLICYmain)

DEEP APPENDIX 1 CHECKLIST

APPENDIX 1

(Formerly Annex XI of the Regional Contingency Plan)

STREAMLINED DISPERSANTS CHECKLIST

I. COMPILATION OF DATA

A) Spill Data OSC

1. Circumstances (fire, grounding, collision, etc.)
2. Time/Date of incident:
3. Location of spill:
4. Type of oil product:
5. Volume of product released:
6. Total potential of release:
7. Type of release (instantaneous, continuous, intermittent, etc.):

B) Characteristics of the spilled oil OSC

1. Specific gravity:
2. Viscosity:

C) Weather and water conditions/forecasts SCC

1. Air temperature, wind speed, direction:
2. Tide and current information:
3. Sea conditions:
4. Water temperature and salinity:
5. Water depth and depth of the mixed layer:

D) Oil trajectory information SCC NRC

1. 48-hour surface oil trajectory forecast:
    - surface area of slick
    - expected areas of landfill
2. 48-hour dispersed oil trajectory forecast:
    - oil movement in water column
    - surface oil movement and expected land fall
    - concentration of the dispersant/oil mixture in The water column

E) Characteristics of available dispersants and application equipment

1. Characteristics of the dispersants:

- name
- manufacturer
- when available
- location(s)
- amount available

- type of containers
- characteristics:
    - i. toxicity
    - ii. effectiveness
    - iii. reactions
    - iv. applicability to spilled oil
    - v. other
- application methods
- misc.

2. Type of transportation and dispersing equipment:

Company one Company two Company three

- name
- location
- equipment available

F) Information about available dispersant and USCG EPA

dispersing equipment

1. Name of the proposed dispersant on EPA acceptance lists:
2. Location of the area to be treated:
3. Estimated time interval between dispersant application and contact with sensitive environment/resources.
4. Estimated distance between application of dispersants and sensitive environment/ resources.

G) Comparison of the effectiveness OSC

of conventional cleanup methods

vs. the use of dispersants

1. Containment at the source:
2. Shoreline protection strategies:
3. Shoreline cleanup strategies:
4. Time necessary to execute response:

H) Habitats and resources at risk SSC

Dispersant treated spill

Untreated spill

1. Shoreline habitat type and area of impact:
2. Resources:
    - endangered/threatened species (state and Federally designated)
    - critical habitats for the above species
    - marine animals (pupping, migration)

- waterfowl use (nesting, migration)
- shellfish (spawning, harvesting) ( ) indicates seasonal considerations
- finfish (spawning, release migration,harvest)
- commercial use (aquaculture, water intakes etc.)
- public use areas (parks, marinas, etc.)
- other resources of specific significance

II. RECOMMENDATIONS TO THE RRT

A) Possible options:

1. Do not use dispersants.
2. Use dispersants on a trial basis, but not as a control or cleanup technique. (To evaluate for future use on this or other spills)
3. Disperse in limited or selected areas.
4. Disperse to the maximum extent possible with accepted methods and available equipment.

B) Other recommendations/rationale:

III. RRT EVALUATION OF THE CONSEQUENCES OF A DISPERSANT APPLICATION DECISION.

- Will applications of dispersant remove a significant amount of the slick from surface water?
- Can the extent of location of shoreline impacts be altered in a positive manner?
- Can the damage to endangered or threatened species, marine mammals, and waterfowl be lessened?
- Will the damage to habitats and resources resulting from chemical dispersion be less than those resulting without chemical dispersion?
- If recreational, economic and aesthetic considerations are a higher priority than natural resource considerations, what is the most effective means of their protection?

Federal Region III Regional Response Team's Dispersant Employment Evaluation Plan (DEEP) May 1991.

and aerial dispersants equipment.

APPENDIX 2-B

B. Application Equipment

1. Aircraft

The following three companies have a known dispersant spraying capability. Note that only one

company is in the immediate area (Cordoba). Their involvement, interest, and capability grows out of the efforts of the New York Cooperative, Clean Harbors, to provide an aerial spraying capability. The other two companies each operate a fleet of large fixed wing aircraft and have extensive dispersant spraying experience. They are prepared to respond throughout the U.S. and abroad.

Company Location Phone

Cordoba Helicopter Hightstown, NJ (609) 448-0031

Bigert Aviation Chandler, AZ (602) 821-2400

One ADDS PACK and one 2,500 gallon system installed in a DC-4 aircraft.

Conair Aviation Abbotsford, BC (609) 853-1171

Ten DC-6 fitted for 3,000 U.S. gallon system, capable of delivering up to 20 gallons/acre. Fifteen 360 U.S. gallon systems for Bell 205 Helicopters and six 180 U.S. gallon systems for Bell 206 Helicopters. NOTE: Per phone conversation on 1/29/91 with Rod Boles of Conair, the two Fokker F-27 (not F-17) systems fitted for 7,000 U.S. gallons, were sold to France.

The only boat mounted spraying systems identified on the East Cost, north of Florida were those owned by the Delaware Bay and River Cooperative (one complete self contained system) and the Clean Harbors Cooperative in New York (one complete self contained system).

Similar system are held by other industry cooperatives at more distant locations. Clean Harbors and the Delaware Bay and River Cooperative have mutual assist agreements which allow for quick access to each others equipment.

RRT 2

Dispersant MOU

MEMORANDUM OF UNDERSTANDING

Among

U.S. Coast Guard District 1 (USCG)

and

U.S. Environmental Protection Agency Region II (EPA)

and

U.S. Department of the Interior (DOI)

and

U.S. Department of Commerce/
National Oceanic and Atmospheric Administration (DOC/NOAA)

and

State of New Jersey Department of Environmental Protection
and Energy (NJDEPE)

and

New York State Department of Environmental Conservation (NYSDEC)

PURPOSE

This Memorandum of Understanding (MOU) is designed to implement sections of Subpart J of the National Oil and Hazardous Substances Contingency Plan (NCP) and implement the requirements of 33 USC 1321(j)(4)(C)(v), the Federal Water Pollution Control Act (FWPCA), as amended by the Oil Pollution Act of 1990, that the Area Contingency Plan (ACP) shall "describe the procedures to be followed for obtaining an expedited decision regarding the use of dispersants." This MOU provides preauthorization for the use of chemical countermeasures (listed in the NCP Product Schedule) by the USCG On-Scene Coordinator. This pre-approval applies only in designated zones in the Captain of the Port New York (COTP-NY) geographic area of responsibility and the Captain of the Port of Long Island Sound (COTP-LIS) geographic area of responsibility.

This MOU also implements Subpart J (Use of Dispersants and Other Chemicals) and Appendices M and N of the Region II NY/NJ Regional Contingency Plan (RCP).

This MOU will be incorporated into Subpart J of the RCP and preempts any pre-existing MOUs.

AUTHORITY

Section 311(d)(2)(G) of the FWPCA requires that the NCP include a schedule for identifying "dispersants, other chemicals, and other spill mitigating devices and substances, if any, that may be used in carrying out" the NCP. These are referred to as "chemical countermeasures" and are listed on the NCP Product Schedule. The responsibility to maintain the NCP Product Schedule was delegated to the Administrator, Environmental Protection Agency, by Executive Order 12777, and is carried out under Subpart J of the NCP.

Subpart J of the NCP provides that the Federal On-Scene Coordinator (FOSC) with the concurrence of the EPA representative to the (RRT) and the States with jurisdiction over the navigable waters threatened by the oil discharge, and in consultation with DOC and DOI natural resource trustees, may authorize the use of chemical and biological countermeasures on oil discharges; provided however, that such chemical and biological countermeasures are listed in the NCP Product Schedule. Subpart J further authorizes agreements for the advance approval of the use of chemical and biological countermeasures listed in the NCP Product Schedule under specific circumstances.

Commandant, United States Coast Guard, has pre-designated the USCG COTP-NY as the FOSC for oil discharges in the COTP-NY zone (as defined in 33 CFR Part 3 and subject to joint response boundary agreements with EPA), and has delegated to the COTP the authority and responsibility for compliance with the FWPCA.

Commandant, United States Coast Guard, has pre-designated the USCG COTP-LIS as the FOSC for oil discharges in the COTP-LIS zone (as defined in 33 CFR Part 3 and subject to joint response boundary agreements with EPA), and has delegated to the COTP the authority and responsibility for compliance with the FWPCA.

The Governor of the State of New Jersey has designated the Commissioner of NJDEPE the authority and responsibility for providing approval for the use of chemical countermeasures for control of oil spills.

The Governor of the State of New York has designated the Commissioner of NYSDEC the authority and responsibility for providing approval for the use of chemical countermeasures for control of oil spills.

The US DOI and DOC/NOAA are designated Federal trustees of certain natural resources under Subpart G of the NCP and are to be consulted regarding the determination to apply chemical countermeasures to oil discharges in U.S. waters.

This MOU constitutes pre-consultation (for DOC/NOAA and DOI) and pre-concurrence (for USCG, EPA, NYSDEC and NJDEPE) for the use of

chemical countermeasures in the preapproved area (Zone 1) and for the trial application in the specific areas designated within Zone 2.

SCOPE

The USCG, EPA, DOI, DOC/NOAA, NJDEPE, and NYSDEC agree that the primary method of cleaning up oil shall be the physical removal of oil from the environment. These agencies recognize that in certain circumstances timely effective physical containment, collection, and removal of the oil may not be possible, and the utilization of chemical countermeasures, alone or in conjunction with other removal methods, may be considered as a means to minimize substantial threat to public health or welfare, or minimize serious environmental damages.

This MOU establishes advance approval under which NCP product schedule chemicals may be used by the FOSC in certain waters of the COTP-NY and COTP-LIS zones (defined in 33 CFR Part 3). The waters of COTP-NY and COTP-LIS are divided into three zones for the purposes of this MOU (see figure 1). The geographic areas and advance approval conditions are as follows:

Zone 1 - Advance Approval Zone

Geographic scope:
Zone 1 is defined as waters under the jurisdiction of COTP-NY and COTP-LIS that lie 3nm and seaward of the Territorial Sea Baseline (as defined in 33 CFR 2.05-10) along the coast of New Jersey (north of the demarcation of the jurisdiction of COTP Philadelphia) and along the south shore of Long Island (New York) west of a line from Montauk Point Light bearing 132 T to the outermost extent of the Exclusive Economic Zone.

Advance approval for Zone 1:
This MOU provides the FOSC with advance approval to use chemical countermeasures listed in the NCP Product Schedule in Zone 1 following the protocols listed later in this MOU.

Zone 2 - Trial Application Zone

Geographic scope:
Zone 2 is defined as waters under the jurisdiction of COTP-NY and COTP-LIS that lie between 0.5nm and 3nm from the Territorial Sea Baseline along the coast of New Jersey (north of the demarcation of the jurisdiction of COTP-Philadelphia) and along the south shore of Long Island (New York) west of a line from Montauk Point Light bearing 132 T, exclusive of all bays and coves. In addition, specific water bodies are also included in Zone 2, and are as follows:

Hudson River south of Tappan Zee Bridge
Upper New York Bay
The Narrows
Lower New York Bay

Raritan Bay excluding Spermaceti Cove and not within 0.5 nautical miles of Sandy Hook, New Jersey
Arthur Kill
Newark Bay up to mouths of Passaic and Hackensack Rivers
Kill Van Kull
East River south of Throgs Neck Bridge
Long Island Sound within COTP-NY area of responsibility only, excluding Little Bay, Little Neck Bay, Manhasset Bay, Hempstead Harbor, Eastchester Bay, Pelham Bay and not within 0.5nm of the northern shore of Long Island.

Advance approval for Zone 2:
This MOU provides the FOSC with advance approval to use chemical countermeasures listed in the NCP Product Schedule on a trial basis in Zone 2 following the protocols listed later in this MOU, unless otherwise prohibited in local Area Contingency Plans. The trial application will not take place if threatened or endangered species are known to be present. The trial application will be performed on a portion of the spill covered by less than 1,000 gallons to determine the product's efficacy on the specific oil under the current set of environmental and meteorological conditions. The quantity of chemical countermeasures utilized should not exceed 110 gallons. The trial application may begin prior to the initial request to the RCP concurrence network for operational use of the chemical countermeasures on a greater portion of the spill. This initial application will be supervised by a trained observer (USCG Strike Team, NOAA Scientific Support Coordinator, etc.) and be reported as qualitative observation (pass/fail). Results of the trial will be reported to the RRT as soon as they are available. A positive efficacy trial should not mean that the chemical countermeasure may automatically be extensively applied as there are many other factors to be weighed in the decision process. This trial application is solely for the purpose of determining if the time and effort should be expended to seek further clarification of the incident-specific issues and concurrence for operational use. If the trial application fails to produce significant results the request for further use will not be made.

<u>Zone 3 - Exclusion zone</u>
Geographic Scope:
Zone 3 is defined as the waters under the jurisdiction of COTP-NY and COTP-LIS that lie within 0.5 nm of the Territorial Sea Baseline along the coast of New Jersey (north of the demarcation of the jurisdiction of COTP-Philadelphia) and along the south shore of Long Island (New York) west of a line from Montauk Point Light bearing 132 T, including all bays and coves. Zone 3 also includes the Hudson River north of the Tappan Zee Bridge, and Long Island Sound, with the exception of the COTP-NY portion described in Zone 2.

Advance approval for Zone 3:
No advance approval is given in Zone 3. Use of chemical countermeasures is not recommended in this Zone. Any request for the use of chemical countermeasures must be accepted by the RCP concurrence network and must follow the guides in the RCP and ACP.

PROTOCOLS

As attested by the signatures set forth at the end of this document, the USCG, EPA, DOI, DOC/NOAA, NJDEPE, and NYSDEC agree that the predesignated FOSC has the authority and may order the use of chemical countermeasures on oil discharges using the guides found in the Subpart J and Appendix M of the Region II RCP and Annex G of the COTP-NY and COTP-LIS ACPs and subject to the following conditions:

1. The decision to use chemical countermeasures within these guidelines rests solely with the pre-designated USCG FOSC.

2. The FOSC may authorize the use of chemical countermeasures on a release or discharge to prevent or substantially reduce the hazard to human life without obtaining concurrences from EPA, affected states, DOI, DOC/NOAA, without following protocols established in this MOU, and without following the guides in the RCP and ACP. If dispersants are used in this manner, notifications to EPA, affected states, DOI and DOC/NOAA shall be made as soon as practicable. Once the risk to human life has subsided, these exceptions no longer apply.

3. In the preapproved area (Zone 1) NCP Product Schedule chemical countermeasures may be used by the FOSC without further concurrence or consultation with the RCP concurrence network.

4(a) For a trial application in Zone 2 areas designated under "Scope" of this MOU no further concurrence or consultation prior to a decision to apply chemical countermeasures need be initiated by the FOSC provided the procedures outlined in the "RRT OSC Dispersant Decision Process" in Subpart J of the Regional Contingency Plan have been followed.

4(b) For operational use in Zone 2, the FOSC must follow the "RRT OSC Dispersant Decision Process" which includes the concurrence of USCG, EPA, and the affected state(s), and consultation of DOI and DOC/NOAA. The information obtained during the decision process needs to be provided to these agencies.

5. The USCG agrees with EPA, DOI, DOC/NOAA and the states that if a decision has been made to use chemical countermeasures under the provisions of this agreement, the FOSC will immediately notify EPA, DOI, DOC/NOAA and the states of that decision. This initial notification will include, but is not limited to, the following information to the extent available:

   Type and amount of oil discharged
   Area affected
   The projected area of impact of the oil if not dispersed
   Reasons why chemical agent has been selected
   Type of chemical agent to be used
   Application rate and method of application
   On-scene weather

6. Only chemical countermeasures listed on the NCP Product Schedule shall be considered for use.

7. If chemical countermeasures are used as described in this MOU or for the protection of human life, a post incident debriefing will take place within 45 days to gather information concerning the effectiveness of chemical agents use and whether any changes to this agreement are necessary. The debriefing will be chaired by the USCG FOSC arranging the time, place, and date of the debrief. The results of the debrief will be included in the FOSC report.

8. Monitoring will be initiated in accordance with the monitoring protocols developed for each of the different zones.

AMENDMENTS

This Memorandum of Understanding may be amended in whole or in part as is mutually agreeable to all parties thereto.

Area Committees may additionally submit for consideration and approval by the RRT concurrence agencies, further defined areas for use/non-use. Approved amendments shall be found in (future) Appendix I of this MOU.

CANCELLATION

This Memorandum of Understanding may be canceled in whole or in part by any party thereto. Cancellation will take place 30 days following delivery of written notification to each of the agencies participating in this Memorandum of Understanding.

Mr. Richard Gimello
Assistant Commissioner,
Site Remediation Emergency Response Coordinator
Department of Environmental Protection
CN 028, 401 East State St.
Trenton, NJ 08625

Dear Mr. Gimello:

The Regional Response Team in Region II (RRT II) unanimously agreed to amend the Memorandum of Understanding concerning Chemical Countermeasure Preauthorization (MOU) at the 7 December 1995 RRT II meeting.

This amendment, included as Enclosure 1, will extend the southern boundary of the MOU from Tom's River, New Jersey to the boundary between Federal Regions II and III. This change eliminates the artificial boundary that coincides with the division between Coast Guard Districts 1 and 5, instead substituting a boundary that is more consistent with the geography of the area.

Based on discussions with the agencies party to the original MOU, we only need your signature and that of Coast Guard Captain of the Port, Philadelphia to put this amendment into effect. Please return the accepted MOU amendment to LCDR Thomas Walker of my staff. Copies will be distributed to all RRT II members.

If you need further information, please contact LCDR Thomas Walker of my staff at the above address or telephone number.

Sincerely,

for

E. J. WILLIAMS III
Captain, U. S. Coast Guard
Chief, Marine Safety Division
By direction of the Commander,
First Coast Guard District

Subj: CHEMICAL COUNTERMEASURE PREAUTHORIZATION IN REGION II

1. The Regional Response Team in Region II (RRT II) unanimously agreed to amend an existing Memorandum of Understanding concerning Chemical Countermeasure Preauthorization (MOU) at the 7 December 1995 RRT II meeting.

2. This proposed amendment, included as Enclosure 1, would extend the southern boundary of the MOU from Tom's River, New Jersey to the boundary between Federal Regions II and III. This change would give you, as COTP Philadelphia, preapproval to use chemical countermeasures in this part of your zone, subject to the conditions of the original MOU (see Enclosure 2). This is a beneficial change because it both makes chemical countermeasures a more viable tool for spill response and replaces the artificial D1/D5 boundary with a boundary that is better aligned with the geography of the area.

3. Based on discussions with the agencies party to the original MOU, we only need your signature and that of New Jersey DEP to put this amendment into effect. After signing please forward to the State of New Jersey for their signature.

4. Please contact LCDR Walker of my staff if you have any questions.

E. J. WILLIAMS III
By direction

Encl: (1) Amendment to Memorandum of Understanding concerning chemical countermeasure preauthorization
(2) Memorandum of Understanding concerning chemical countermeasure preauthorization

1. Purpose

The Coast Guard plays a vital role in managing or contributing to major local, regional, national, or international all-hazard responses. Lessons learned and best practices from previous events and exercises show that leadership must take effective and credible steps early on in a response in order to establish operational momentum, build interagency coordination, and earn public trust. How the Coast Guard handles the first days of a major event typically sets the tone for the remainder of the response. References (a-p) are some of the key applicable policy and guidance documents that serve to inform readiness and preparedness requirements and activities. This guide presents tools to help ensure unity of effort and to achieve best effect in the first 96 hours.

1.1 Background

Sector Delaware Bay's Contingency Planning & Force Readiness Staff (CPFR) analyzed lessons learned from recent major incidents requiring a large-scale Coast Guard response. The analysis focused on three scenarios: (1) hurricane, (2) oil spill, and (3) ship/bridge allision, and drew upon lessons learned from Hurricanes KATRINA and SANDY, T/V ATHOS I, M/V COSCO BUSAN, DEEPWATER HORIZON, the 2015 Papal Visit, and 2016 Democratic National Convention. While these events differed in size and scope, several recurring themes were discovered:

- Accountability and Mobilization of Personnel. Coast Guard Incident Management Teams (IMT) struggled to account for all attached personnel, especially following hurricanes, due to communications infrastructure damage and the level of chaos in the region. A hurricane in the greater Philadelphia area would present similar challenges. In addition, IMTs found it

difficult to quickly mobilize sufficient additional personnel resources.

- Information Management. Responders struggled with tracking information effectively, and maintaining situational awareness of resources and operations, because of an overwhelming and constantly changing influx of information. Sharing information within the response organization, and ensuring dissemination of accurate information to the public, stakeholders, and Congress proved very difficult in multiple instances. Additionally, incident management personnel faced challenges with discerning the accuracy of initial reports, staying ahead of social media, and responding to spurious information.

- Logistics. IMTs had to overcome significant logistical challenges dealing with Incident Command Post (ICP) location, emergency relocation sites for continuity of operations, information technology infrastructure, food, fuel, and berthing. These topics must be addressed during exercises and training to ensure a smooth rollout during an actual crisis response.

- Watch Rotation. Leadership should consider crew endurance when planning crew rotations, overnight operations, and deliberate crew rest measures. A crisis response demands a full crew effort in which non-urgent leave and TDY will not normally be granted. To ensure safety and effectiveness, personnel tempo should not exceed **14 hours per 24 hour period** (with a target of 12 hours ideally), and 60-72 hours per week during a sustained response. A key issue will be to identify who to send home early on in an event to keep from burning out responders and incident management personnel.

- Cascading Resources. A Type 1 or 2 incident (and in some cases a Type 3 incident) will quickly overwhelm Sector resources. Response leadership should familiarize themselves with available surge capabilities and initiate requests for additional forces early, as appropriate, via the District. The long standing Coast Guard culture of being "forward leaning" and "hitting cases hard and fast" continues to be relevant. Scaling back is always easier than ramping up after initial incident momentum has been expended.

- Volunteers. Historically, volunteers from the general public have not been utilized in oil spills outside the care and processing of oiled wildlife due to the health and safety hazards present during an oil spill incident. Volunteers must be trained, OSHA compliant, safe, supported, and properly coordinated. To be successful, the volunteer program needs a strong **designated volunteer coordinator** and a robust program to ensure positive public opinion of the response. The Use of Volunteers section within the Delaware Bay Area Contingency Plan (ACP) sets forth guidance and protocols for the potential use of volunteers for non-wildlife related work assignments during an oil spill incident.

2. Road Map to Success

2.1 Meeting the demands of the first 96 hours of a major incident starts with the very first decisions made by the Sector Commander/Incident Commander (IC) and/or Unified Command (UC). The initial Incident Action Plan (IAP) will capture key decisions, command priorities and response objectives. The ICS process provides a structure and process to make well informed decisions.

Chapter 4 of reference (f) provides the IC/UC with standard key decisions, priorities, and objectives that are common to most response types the Coast Guard will encounter. When developing response priorities, incident leadership should consider **p**ersonnel/**p**ublic safety, **e**nvironmental concerns, **p**roperty at risk, **s**ecurity, and **e**conomic impact (**PEPSE**), as well as public and political reaction to the incident and perception of the response.

In evaluating the context of the situation at hand, response leadership should take a few moments to ask themselves the following questions:

- What have we not seen before; what is completely foreign to us?
- What have we seen before; what is familiar to us?
- What do we know?
- What are we still learning?

Next, response leadership should consider:

- What must we do?
- What can we do?
- What are we trying to accomplish?
- What resources do we need to bring to bear?
- What critical steps must we take?
- What are the restrictions or limitations (legal, procedural, etc)?
- What are the critical notifications that must be made?

This thought process will not only serve to put one in the right mindset with respect to leadership and decision-making styles, but it will help to frame initial response priorities.

2.2 Routine Missions

Depending on the scale and/or severity of the event, Sector Delaware Bay may have to alter or curtail routine missions to support the operational tempo of the response. If this happens, Sector personnel must quickly work with state and local counterparts to notify customers, stakeholders, affected partner agencies, and elected officials. The Sector Commander may consider temporarily suspending or curtailing the following missions if such suspension does not pose undue operational risk:

- Activities not mandated by regulation or statute such as voluntary uninspected passenger or towing vessel examinations.
- Mid-period, annual, or periodic inspections that exceed regulatory requirements.
- Oversight of new construction done under class authorization (except safety, firefighting and environmental oversight).
- Safety inspections at bulk liquid, dry bulk, and liquefied gas facilities, except those that pose a high risk to the port.
- Priority III and IV Port State Control and International Ship and Port Security (ISPS) III boardings.
- Formal marine casualty investigations for informal investigations and informal investigations for data collection upon approval from D5(dp).

- Formal suspension and revocation hearings; pursue settlement agreements instead.
- Container inspections; except for explosives, hazmat, fireworks, etc.
- Marine event support; place burden on event organizers and local agencies to the largest extent possible.
- Transfer monitors.
- Unannounced government-led vessel or facility response plan exercises and all other planned unit exercises/drills.
- Inspections such as Ready for Operations (RFO), Operational Safety Inspections, etc
- Request relief from external inspections/audits (STAN, EKMS, etc).
- Living Marine Resources/Recreational Boat Safety boardings and select PWCS activity.
- SOPP/OPAR reporting/review.

2.3 Information Management

- Strategic Messaging. Working with state, local, and responsible party counterparts, leadership should employ robust, aggressive, and targeted strategic messaging to gain the confidence of the public and elected officials during a response. Review the guidance listed in the PIO Toolkit with the PIO to develop the FOSC/UC Strategic Messages. Strategic messaging, not to be confused with routine public affairs outreach, builds upon strong relationships with key agency leadership, the media, and elected officials, cultivated by Sector leaders on a routine basis. These relationships will facilitate streamlined communication focused on risk communication, safety and environmental issues, and public safety/security during a response.

- Media Outreach. Media outreach must be rapid and aggressive during a major response, and should focus on demonstrating and conveying the capability of the federal government, through the network of partners, to manage the response. Coast Guard leadership cannot miss the opportunity in the first hours to deliver a strong message focused on winning public confidence. Failure to make this effort may result in competing media coverage that could send contradictory or misleading information. Even in situations where information is incomplete, response leadership must make it a priority to issue a press release outlining:

  - Who is in charge;
  - What we know;
  - What we don't know (or are learning);
  - Current actions;
  - Agencies involved;
  - Preliminary specific messaging; and
  - Time and place for a press conference.

  Coast Guard led operations should be aggressive in conducting daily press conferences that:

  - Include key stakeholder spokespeople to convey response unity;
  - Outline the maximum potential of the incident;
  - Deliver coordinated safety messages and response goals; and
  - Demonstrate organization, control of situation, pre-planning, inter-agency coordination

and amount of assets and personnel engaged in the response.

Additionally, consider:

- Knowledge of and potential participation in (or requests for information to support) other stakeholder press events;
- Embedding media with Coast Guard responders and/or providing access to the ICP.
- Establishing a visible Coast Guard presence.
- Allowing media escorted access to the ICP in order to capture the level of commitment required by crisis response, while still ensuring operational security.

- Risk Communication. Working with state, local, and responsible party counterparts, detailing *PEPSE* through the media following a major event will ease public scrutiny. Consider using recognized (and trusted) local or regional officials, or national experts (i.e. NOAA Scientific Support Coordinators, academic experts, etc.) to deliver such messages. Strategy sessions for risk communications should be scheduled. Additionally, risk/crisis communications specialists from the Coast Guard Public Affairs program should be engaged and mobilized early on. These specialist can help with strategic messaging, strategic insight into communications tools, social media monitoring, rumor control, etc.

- Congressional/Elected Official/Political Appointee Outreach. Elected officials, including Congressional delegates, expect to be included in communications protocols for major responses. Often, they only require periodic operational briefs, but some may expect to visit the ICP and to be shown the on-scene response effort. Working with state, local, and responsible party counterparts, response leadership should ensure that their staff conduct elected official briefings early on in the response once they have gained reliable situational awareness (ideally, within the first 12 hours). The message should follow the same guidelines of normal public information protocols. Including elected officials early on will likely garner critical support from the political community. If response leadership does not maintain an aggressive political outreach program, they run the risk of having to publicly defend response actions in addition to trying to fill an information gap. Incident management staff should establish a political info sharing cycle during the 24-96 hour period.

- Town Hall Meetings. Although normally done beyond the initial 96-hour response period for prolonged events, town hall meetings with state and local officials and responsible party, as part of a coordinated media plan and organized by interagency public information representatives (i.e. Joint Information Center), have proven to be an effective method to reach out to the impacted community in a sensitive manner, particularly with pollution incidents. While a simple presentation format works well, a "College Fair" style format is also effective. The College Fair format requires multiple stations in a large open setting, which allows the public to access information they want. The College Fair format requires more labor, but can serve to better answer specific (and challenging) questions in a palatable manner more geared to the attendee and less confrontational to the responder. As an example, stations for a environmental incident may include:

    - Risk communication station (specific hazards of pollutant)
    - Response organization station (Unified Command and response structure)

- Response strategies and goals (sensitive area protection, booming, fishing closures, economic concerns, etc.)
- Regulatory station (OPA-90 history and applicability)
- Investigation station (investigative role, functions, timeline, purpose)

- Web-based media. During an incident, the public will use television, internet, and social media for news to fulfill a never-ending demand for information. A portion of the public may view the incident as an **opportunity** to place political blame on elected officials and the sitting Administration. Others may consider the incident part of a government conspiracy. Failure to tell our story using these mediums will result in an information void. In addition to a televised press conference(s) within 24 hours of a major crisis, Coast Guard-led responses should incorporate an incident specific web site that allows collaboration between all members of the UC. Working with state, local, and responsible party counterparts, PIOs should also use social media, including Facebook and Twitter, to deliver publicly available information such as scheduled press conferences, major response milestones, major successes, etc.

- Common Operating Picture. To help create multi-agency situational awareness, all involved responding agencies should use a Common Operating Picture (COP) to visually display and maintain situational awareness in the ICP. The COP should utilize the Situation Unit (SITU) as the official and sole source of response information. Consider also utilizing the following COP technologies:

  - Environmental Response Management Application (ERMA) - This is the desired COP tool for pollution incidents. ERMA has proven very valuable through employment at the Spill of National Significance (SONS) 2010 Exercise as well as Deepwater Horizon.
  - Web Emergency Operations Center (WebEOC)
  - Homeland Security Information Network (HSIN) Connect

  Additional resources available to support COP development include:

  - Incident Management Software System (IMSS)
  - CG One View
  - Enterprise Geographical Information System (E-GIS)
  - Marine Information for Safety and Law Enforcement (MISLE)
  - Automated Information System (AIS)
  - Ship Arrival Notification System (SANS)
  - Vessel Monitoring System (VMS)
  - Web-based port or waterway cameras
  - Common Assessment and Reporting Tool (CART)
  - Watchkeeper

- Operational External Communications. Depending on the nature of the event and targeted audience, various tools exist for communicating with maritime interests, including:

  - Alert Warning System (for brief immediate information sharing)
  - Homeport (for more detailed internal and external secure information sharing)
  - Marine Safety Information Bulletins (MSIB)

- Maritime Exchange
- Safety Marine Information Broadcasts (SMIB)
- Delaware Bay MTSRU Port Stakeholder Conference Calls
- Adobe Connect

o Information Safeguarding. Information management includes collecting data from a variety of sources, organizing and processing the data, and disseminating information throughout the response to support current and future operating cycles. Information management also involves communicating vetted data up and down the chain of command in order to maintain consistent situational awareness. During a response, leadership must take great care to avoid sharing sensitive information (regardless of classification) with non-affiliated personnel. Such information sharing includes casual discussion of sensitive information in public spaces, texting or e-mailing non-affiliated personnel, and posting information and/or photographs on personal social media websites or other similar electronic forums. It may also include sharing sensitive information with personnel from non-governmental organizations (NGOs) who are serving in a liaison role. Leadership should consider issuing policy regarding personal social media usage during protracted responses. Additionally, information and data retention protocols and controls must be addressed in anticipation of post-event litigation.

o Battle Rhythm. Within the first six to ten hours, leadership should establish (or recommend) a deliberate daily cycle of formal situation reporting for the chain of command. The UC should coordinate to ensure inclusion of each of the UCs' supervising entities in a single formal situation reporting timeline, using a single format, if possible. The best method for determining the desired reporting criteria (metrics, etc.) and frequency involves reverse engineering the criteria and frequency requirements from the highest ranking entity in the reporting chain for a particular response (i.e. potentially from the White House or DHS downward). Based upon LANTAREA's and District Five's default battle rhythm applied to hurricanes, the Sector should anticipate a minimum of two formal situation reports due daily, with the potential for a third based upon any significant overnight developments. The required format for these reports should be clarified early on in the response, and may depend on the circumstances of the event, but will likely be in the form of either a DHS Senior Leader Brief or ICS 209. Additionally, graphics, slide decks or photos may also be required to better or more quickly convey details to senior officials. Template DHS Senior Leader Briefs and additional resources may be found on the D5 IMT Portal Site, https://cg.portal.uscg.mil/units/d5/district-five-incident-management-branch, and the LANTAREA IMT Portal Site, https://cg.portal.uscg.mil/units/lantarea/LANT3/LANT35/LANT35IM.
In establishing or recommending the frequency of reports, the UC should consider the schedule of meetings in the ICS Operational Planning Cycle so that the most current information is available to report out.

Situation reporting should contain the following critical information at a minimum:

- Current situation.
- Whether the situation is improving or degrading.
- Resource gaps.
- Resources or critical assets/infrastructure at risk.
- Port or national security implications/economic impact.
- Key metrics (oil spilled, oil recovered, ships diverted, passengers rescued, miles of

waterway/beaches affected, etc.).
- Political considerations.
- Press status/media relations.
- Wildlife impacted.
- Status of key stakeholders (RP, LE agencies, investigations, etc).

o Informal Communication. Upper levels of the chain of command (i.e. District Commander) may require additional, discreet informal communication with the Sector Commander, especially early on in the response, in order to fill any gaps in the normal battle rhythm reporting scheme. The Sector Commander or IC should consider establishing an informal telephone or e-mail reporting system with his/her chain of command that covers key incident challenges, goals, and accomplishments at least twice daily. To avoid unrealistic reporting expectations, operational commanders should strive to deliver timely information while managing expectations on statistical compilation, milestone reporting, etc. Furthermore, the Sector Commander/IC should rely on statistical data supported by the response's established documentation system rather than other tactical reports to avoid inconsistent reporting. Similar to formal reporting, the content and schedule of these informal communications will be influenced by subsequent informal briefings occurring further up the chain of command (i.e. District Commander to LANTAREA Commander, etc). Often a simple e-mail with applicable (well selected) attachments from the Sector Commander/IC up the chain of command serves to best inform critical parties. To ensure early alignment during the initial stages of an incident, the Sector Commander should plan to brief the District Commander (ideally within the first 30-45 minutes of a major incident) and coordinated through the respective Sector and District Command Centers. Enclosure (4) contains a sample script for an initial "quick call" made by the Sector Commander to the District Commander.

Suggested Informal Communication Reports	
Informal communications serve to deliver messages to permit senior level consultation and advocacy for the field. Reports should focus on whether situations are improving or degrading, resource gaps/needs, resources at risk, and any national defense concerns.	
Morning Report	Evening Report
• Overnight accomplishments • Forecasted major events • Incident metrics • Resource needs • Challenges • Goals for the day • Local/national media reporting	• Accomplishments for the day • Incident metrics • Resource needs • Challenges • Goals for the evening

Sample Consolidated Battle Rhythm				
Time	Call Focus / Deliverable	Frequency	Participants / Audience	Internal/ External
0400	Formal SITREP *(confirm case by case)*	Daily	Sector to District	Internal
	Morning Command Situation Brief	Daily	Sector IMT to Sector Commander/UC	Internal
	Morning Informal Communication w/ District Commander	Daily	Sector Commander to District Commander	Internal
	Objectives Meeting	Daily/Weekly	See IMH	Internal
	Command and General Staff Meeting	Daily/Weekly	See IMH	External
1000	Formal SITREP	Daily	Sector to District	Internal
	Tactics Meeting	Daily/Weekly	See IMH	Internal
	RRT Conference Call (if needed)	Daily/weekly	UC, FOSC to RRT via D5 IMPA	External
	Port Coordination Team	Daily	Sector to MTSRU Port Coordination Team	External
	Press Conference	Daily	UAC/IC	External
	Planning Meeting	Daily/Weekly	See IMH	Internal
	Operations Briefing	Daily/Weekly	See IMH	Internal
	Evening Informal Report	Daily	Sector Commander to District Commander	Internal
2200	Formal SITREP	Daily	Sector to District	Internal

2.4 Logistics

- Contingency Logistical Support. The Office of Contingency and Deployable Logistics (DOL-4) coordinates the overall DCMS logistics response effort to any contingency across the Coast Guard. DOL-41, the DCMS Watch, is co-located with the LANTAREA Command Center and serves as a 24/7 single point of contact for emergent mission support issues, including requests for Deployable Support Elements and Emergency Response Teams. Requests may be forwarded to the DCMS Watch via the D5 Command Center or

IMT. References (l-m) further describe resources, capabilities and equipment available to support contingency responses. Additionally, DOL-4's CG Portal site contains helpful fact sheets, references and contacts: https://cg.portal.uscg.mil/units/dol/dol-4.

- Incident Command Post (ICP) Locations. A large multi-agency response will quickly overwhelm the capabilities found within Sector Delaware Bay's General Greene room (holds approx. 40-50 people), which is typically Sector Delaware Bay's initial ICP site. Following the T/V Athos I incident in 2004, the Sector Delaware Bay CP/FR staff, with input from the Area Committee, decided that maintaining a list of alternative pre-designated ICP sites was not feasible, due to the varying nature of conferences, contracts, and events at possible locations. In lieu of a pre-designated list, CP/FR in conjunction with the Logistics Department should ensure that a full ICP can be supported within the Sector Delaware Bay multipurpose room for the first 96 hours of an incident.

  During the latter part of the first 96 hours, or when the full nature and extent of the incident is known, plans should be made to move to a new ICP site. The Sector Delaware Bay ACP contains a copy of the T/S ATHOS I ICP Move Plan (section 9796), which can be referenced as a guide to develop requirements for moving the ICP from Sector Delaware Bay to an incident's new ICP.

Major Incident Initial Command Briefing Script
Sector Commander to District Commander/Chief of Staff

(This is an initial guide and contingent upon unique requirements/desires of the next senior official)

1. What is the initial assessment?

2. What are the immediate plans/initial objectives? (pull from ICS-201 or pre-scripted ICS-202)

   Examples:
   - *Provide for the safety and welfare of citizens and response personnel.*
   - *Identify impacts to MTS infrastructure and cargo flow.*
   - *Conduct damage/stability assessment of vessel.*
   - *Develop and implement salvage and tow plan.*
   - *Implement agency and maritime community security plans.*
   - *Establish and continue enforcement of safety and security zones.*
   - *Initiate actions to stop or control the source, and minimize the total volume of product released.*
   - *Contain, treat, and recover spilled materials from the water's surface.*
   - *Identify and protect environmentally sensitive areas.*
   - *Establish an IMT.*
   - *Inform the public, stakeholders, and the media of response activities…*

3. What assets are on scene; who is On Scene Commander & Maritime Firefighting Coordinator (if req'd). Competency/Capacity/Sustainment?

4. Are there any limiting factors/constraints (what don't I have now or will I "run out of" first)?

5. Are there any resources that D5 can/should move right now? (i.e. Strike Team, MSST, MSRT, Cutters, CST, helos, Fixed Wing, Crisis Communications Team, PIAT, IMAT)

6. What CG missions/units/members/families are affected and how bad?

7. How many members of public are affected (roughly)? Is there a need for a public health advisory?

8. Are MARSEC or Force Protection changes being considered or requested? (if yes, ensure this is highlighted in CIC reporting)

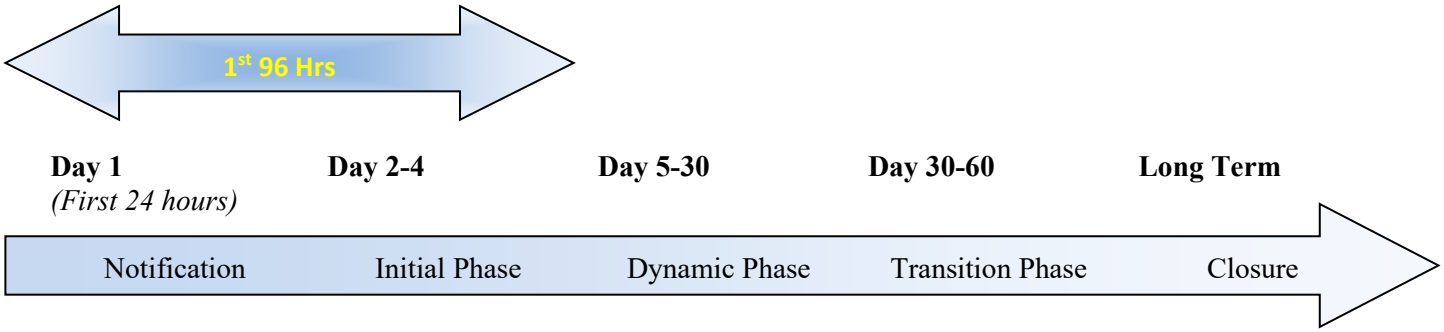
9. What is the most significant worry/concern with the incident?

10. Is there anything D5 can do for the Sector right now?

11. When should the next informal call occur? (be cognizant of CIC reporting timelines)

Enclosure (1)

Response Timeline



Notification	Initial Phase	Dynamic Phase	Transition Phase	Closure
• Make internal/ external briefings • Obtain situational assessments • Ensure initial safety of public is addressed • Assure preservation of CG personnel, assets, & capability • Establish UC and strategic goals • Assign CG roles • Develop/ implement unified media outreach plan & put out initial press release • Enact pre-scripted plans (ACP/AMSP) & pre-designated COP tools • Seek additional CG support resources • Conduct initial briefings of elected officials • Complete ESA Consultations	• Begin transition to ICS/ICP • Coordinate info sharing cycle with elected officials • Establish incident-specific website • Establish/refine COP • Execute media outreach plan & embed media into operations, if feasible • Establish liaisons in applicable EOCs • Carry out pre-scripted plans • Establish or update battle rhythm • Establish resource needs for sustained response & ordering process • Obtain Crisis Communications support & monitor the public narrative; ensure rumor control	• Sustained crisis management • Full Unified / Area Command Ops • If the incident is large-scale, evaluate transfer to an IMT in order to resume normal Sector missions • Employ novel/original practices as necessary • Ensure document retention process & controls in place	• Force "right sizing" • Force scale-down • Demobilization • Recognize / reward crew performance	• After action reports • Incident Specific Preparedness Review (ISPR) • Case studies • Continuous improvement on lessons learned • Incorporate scientific / academic research • Identify funding needs/opportunities and/or FY budget requests

Enclosure (2)

First 96-Hours Checklist

Once leaders have determined the context of the situation and initial priorities, they can better utilize the checklist that follows. This checklist complements the USCG Incident Management Handbook, ICS Job Aids, and other guiding documents, and like these references, it does not address all potential action items or situations. During the first 96 hours, responders will likely encounter unfamiliar scenarios and conditions requiring adaptive behavior, new procedures, and novel tactics. Responders should view the checklist in this light, keeping in mind that action items may not apply in all circumstances.

Color Legend

Sector Command Center	
Unified Command	
Planning	
Operations	
Logistics	
PIO	
LOFR	
Safety Officer	

Hour +1 **(Day 1)**

UC	Identify Unified Command members and conduct an initial conference call or meeting.
	Consider briefing D5 commander and/or Chief of Staff (see script in Enclosure 1).
SCC	Ask the following evaluation questions: • What has happened? • What have we not seen before; what is completely foreign to us? • What have we seen before; what is familiar to us? • What do we know? • What are we still learning? • What are we doing? • What resources do we need to bring to bear? • What are our immediate future plans? • What are the restrictions or limitations? • What are the critical notifications that must be made?
	Classify the incident (Act of terrorism, major marine casualty, flood, etc.)
	Coordinate partner agency/NRC notifications.
	Make critical federal, state and local stakeholder notifications per QRC.
	Initiate Critical Incident reporting (DAD-SAFE) and/or Maritime Operations for Threat Response (MOTR). Establish reporting timeframes and briefing thresholds.
	Evaluate immediate responder risks.
	Develop SMIB and broadcast.
	Coordinate appropriate COTP orders and Safety or Security Zones.
	Assess on-scene situation using Operational Risk Management.
	Activate/recall an initial Incident Management Team.
	Activate COOP Plan, if necessary.
	Contact ESDD Philadelphia and/or D5 C4IT for IT support to ICP.
LOGS	Evaluate need to initiate an Order to Account (CGPAAS).

Hour +2 **(Day 1)**

UC	Determine port impacts and need/potential for closures or restrictions.
Planning	Determine need for Coast Guard deployable specialized forces per RFF process. Initial/anticipated requests may be made verbally via CIC reporting and/or via the D5 Command Center. (AST, PIAT, IMAT, D5 DRAT, MSST, MSRT, SERT)
	Determine need for OGA deployable specialized forces and request as necessary (DOD Civil Support Team, DOD Explosive Ordnance Division, CDC, etc)
	Contact Scientific Support Coordinator if not already done by SCC or Response.
PIO	Engage PADET/D5 to issue initial press release (refer to Initial Media Plan, PIO Toolkit and templates).

Hour +5 **(Day 1)**

UC	Evaluate MARSEC level.
	Establish Key Asset and Critical Infrastructure protection priorities.
	Determine need for DCMS/DOL support.
	Request D5 Governmental Affairs assistance with managing/liaising with impacted Governor & Congressional staffs.
	Ensure ESA consultations have been initiated or completed.
SCC	Prepare to transition incident out of Command Center. Prepare ICS 201.
Planning	Prioritize sensitive areas for protection.
	Update appropriate MISLE Cases.
	Post MSIB on Homeport.
	Monitor and post to event created on WebEOC as necessary.
	Establish reporting protocol via HSIN.
	Develop CART entry; update waterway status as necessary.
	Establish Common Operating Picture.
	Identify high risk/high consequence vessels/cargoes, in-port or arriving.
	Notify MTSRU members and conduct a conference call.
	Determine the need to activate Reserve forces. Recall Reserve forces as necessary.
	Update waterway status on Homeport as necessary.
	Establish Battle Rhythm Communication Plan.
OPS	Initiate or complete ESA consultations with NOAA SSC and FWS.
	Deploy VOSS.
	Establish use of force policy.
	Establish use of force policy.
LOGS	Consult initial IMT members and SCC to determine incident transition plan and timing.
	Conduct USCG asset/infrastructure damage survey.
LOFR	Establish Agency Reps (AREP) at activated State EOC's (NJ, PA or DE).
PIO	Schedule/plan for press conference. Establish prep time and key messages with FOSC.
SOFR	Establish Response Safety Plan.

Hour +10 **(Day 1)**

UC	Cancel/curtail non-essential missions/tasks – ensure public/partner notification.
Planning	Engage with NMFS and State Fisheries agencies to open dialogue regarding closures (if applicable).
	Stand up MTSRU and begin cargo prioritization.
LOGS	Update internal forces using AWS.

LOFR	Conduct briefings of elected officials/staff; coordinate with D5 external affairs.
	Assess requirements/locations for CG Agency Reps (state/county EOCs, etc).
PIO	Monitor media reports and social media; assess need to conduct rumor control.

Hour +24 (Day 1)

Planning	Establish appropriate (written) safety and security zones.
	Activate Volunteer Plan as appropriate.
	Monitor critical port cargo/energy inventories (daily).
	Adjust battle rhythm/reporting/meeting timelines etc.
PIO	Initiate daily press release and press conference protocol (refer to Initial Media Plan).
	Utilize incident-specific website for public release for information.
	Prepare to embed media on/near-scene.

Hour +48 (Day 2)

Planning	Refine vessel traffic management plan.
OPS	Engage with State Energy Offices – establish daily critical energy dashboard, if needed.
	Conduct Waterway Assessments and ATON verifications (post wx event).
LOGS	Manage emergent personnel tempo not to exceed 14 hours in 24. Submit request for additional forces if necessary.
PIO	Embed media on/near-scene.

Hour +72 (Day 3)

LOGS	Consolidate Coast Guard damage reports to D5.
PIO	Develop VIP engagement site brief plan within first 72 hours.

Hour +96 (Day 4)

UC	Consider Town Hall Meeting with partners/UC/public within 96 hours of event.
	Adjust Battle Rhythm accordingly.
LOGS	Support VIP site visit.

Notification Matrix

The following matrix identifies key notifications that the IC, AC, or National Incident Command (NIC) / Principal Federal Official (PFO) have responsibility for making.

Audience	Coast Guard Authority	Incident Command
Executive	COMDT/AREA	NIC/PFO
Cabinet	COMDT/AREA	NIC/PFO
S-1	COMDT/AREA	NIC/PFO
International Partner Coordination	D5	UAC
NIC	D5	UAC
Governors	D5	UAC
Congressional Reps	D5/Sector GAO	UAC
FEMA	D5	UAC
EPA Region II, III	D5/RRT Coordinator	UAC
State OSC	Sector CC/Response	IC
DAD SAFE (NCC)	Sector CC	IC
NRC	Sector CC	IC
Strike Team	Sector CC via D5 CC	IC
PIAT	Sector CC via D5 CC	IC
SERT	Sector CC via D5 CC	IC
MSST / MSRT	Sector CC via D5 CC	IC
Area Maritime Security Committee	Sector CPFR	IC
Area Committee	Sector CPFR	IC
Port Stakeholders via Maritime Exchange	Sector CPFR/Prevention	IC
City/State Elected Representatives	Sector GAO/LOFR	IC
Affected Municipalities	Sector LOFR	IC
City/State EMA Director/EOC(s)	Sector LOFR/CPFR	IC
State/Local LE and Fire Services	Sector Response	IC
CBP Port Director	Sector Commander	IC
FBI SAC	Sector Commander	IC
Port Authorities	Sector Prevention	IC
CDC	Sector Response	IC
State Surgeon General	Sector Response	IC
Department of the Interior	Sector Response	IC
State Energy and Pollution Response Agencies	Sector Response	IC
Army Corps of Engineers	Sector Prevention	IC
Nat'l Marine Fisheries Service	Sector Response	IC
Civil Support Team	Sector Response	IC
DOD Naval Explosive Ordnance Division	Sector Response	IC

Enclosure (4)

Joint Coast Guard and NJDEP and/or PADEP and/or DNREC Initial Media Plan for an Oil Spill Incident

(NOTE: City/County may participate too)

Objective for the First 96 Hours

Day 1

- Develop an incident-specific media plan (PIO/JIC).
- Distribute an initial release with basic information on the response.
- Determine whether to establish a Joint Information Center (JIC).
- If a JIC is activated, send out a media advisory with phone numbers and other pertinent numbers including how to report oiled wildlife, oil sighting, third party claims, volunteer hotline, and other public information hotlines.
- Coordinate with the PADET, District Public Affairs, PIAT and/or state agency resources to launch an incident-specific website. De-conflict with NOAA (SSC).
- Agree to info distribution/release protocol.
- Send a media advisory announcing the first press conference, staging area/command post information, website link, etc.
- Send the second news release out just prior to the press conference.
- Prior to the press conference, review the guidance in the PIO Toolkit.
- At the press conference, provide an overview of the incident and response efforts to date. Address public health advisories, response organizations, resources deployed, environmental/wildlife impacts, closures, policies and plans, and potential opportunities to use affiliated/unaffiliated volunteers.
- Evaluate opportunities for disseminating information on a variety of levels such as social networking tools (i.e. Twitter, Facebook, etc.).

Day 2

- Use the Day 1 Media Plan as a baseline and expand to meet the needs of the targeted operational period. Include:
  - JIC hours of operation.
  - Appropriate protocols for the situation (i.e. Congressional/VIP site visits, etc.).
  - ICS-207 (Incident Organization Chart) information.
  - List of products to be produced.
- Produce fact sheets as appropriate (product, fate of oil, spill countermeasures).
- Assist with establishment of volunteer hotline (or obtain the information about the hotline).

Day 3

- Establish a schedule for holding future press conferences and disseminating news releases (1100 and 1500 each day works well with news cycles).
- Evaluate the effectiveness of social media for dissemination of information, including the use of social media as a data collection tool.
- Continue posting specific information on websites and disseminating information through the media.
- Consider establishing an email address as a means for the public to ask questions.

Enclosure (5)

Day 4

- Prepare and release success stories and photos of the response efforts.
- Provide the media with photo opportunities and tours of activities, site cleanup, command post operations, etc.
- Continue JIC operations until no longer needed and then demobilize as directed.

News Release Checklists

1st News Release

- Announce formation of the UC.
- Summarize the incident.
- Provide basic information (contact phone numbers for media).
- Include exclusion zone, safety zone, and security zone information as applicable.
- Include evacuations if applicable.
- Include links to PIER or to appropriate incident specific or state agency web-site, Twitter, and Facebook.
- Include a tag line for JIC hours of operation.
- Include information about air monitoring.
- Include wildlife impacts (animals collected, and animals released after care) and oiled wildlife reporting hotline.

2nd News Release

- Announce formation of the JIC.

3rd News Release

- Announce the time and location of the press conference.

4th News Release

- Include information about air monitoring.
- Include wildlife impacts (animals collected, and animals released after care) and oiled wildlife reporting hotline.

Future Press Releases (update all info as it becomes available)

- Summarize the incident.
- Provide basic information (contact phone numbers for media).
- Include exclusion zone information if applicable.
- Include evacuations if applicable.
- Include links to PIER or to appropriate incident specific or state agency web-site, Twitter, and Facebook.
- Include a tag line for JIC hours of operation.
- Include information about air monitoring.
- Include wildlife impacts (observed/reported/monitoring for) and wildlife hotline information.
- Contact info/sources for more information.

Social Media Protocol

The Coast Guard will partner with members of the Unified Command to maintain social media coverage during incident response. Prior to the establishment of a joint information center or formal/approved media plan, Sector PIO(s) should work closely with the Public Affairs Detachment and/or D5 Public Affairs to release vetted information via applicable official Coast Guard social media accounts.

Types of information that may be appropriate for social media releases include:

- Initial confirmed information and response actions.
- Establishment of the UC.
- Re-direction to social media thread (i.e. Twitter), and/or the appropriate incident specific UC or state agency web-sites being used for response communications.
- Links to news releases and fact sheets.
- Exclusion zone, safety zone, and security zone information as applicable.
- Evacuation information, if applicable.
- Air monitoring information.
- Wildlife impacts (animals collected, and animals released after care) and oiled wildlife reporting hotline.

Elected Official Site Visit Protocol

While the guidance below focuses on a site visit by the Governor, these protocols can be used for most elected official site visits. Clearly, the UC/AC/National Incident Command would need to consider additional measures for a Presidential or Vice-Presidential site visit.

Initial Contact

- Designate a single point of contact (typically the Liaison Officer) for the Governor's office.
- The Governor's office scheduler should call and follow up via e-mail. The first schedule presented almost always changes.
- Coordinate security with the State On Scene Coordinator (SOSC) and with the applicable state police.
- The Liaison Officer and PIO should coordinate planning for the site visit

Preparation

- Pre-arrival concerns:
  - Press staging, cameras, and media presence.
  - Press availability needs:
    - Portable PA system.
    - Break-out box.
    - Appropriate backdrop (work with PIO for proper location).
  - Site control for media:
    - The Liaison Officer, PIO, and site security should develop a press credential and/or check-in protocol.
    - Site security should protect the integrity of the operation during visit.
    - Provide media escorts as necessary.
- Arrival:
  - The Governor will expect to be met upon arrival by a senior official(s) involved in the response. The Federal On Scene Coordinator (FOSC)/SOSC, Area Commander, or Principal Federal Official (PFO) is the best choice to greet the Governor.
  - Have necessary transportation and parking ready (coordinate with Logistics).
  - Walk to the briefing area (if able to get close to ICP).
  - Provide the UC with information on security arrangements for the Governor's visit.
- Briefings:
  - Pre-briefing:
    - UC should answer questions. The presence of local government representatives may need to be considered by the UC based on event circumstances and as per the ACP.
  - Formal briefing (arrange with Governor's team as to preference):
    - Provide a guided tour of the incident command post.
    - Include section chiefs and agency representatives. Ensure the Wildlife Branch/Environmental Unit Leader is/are present.
    - Provide a spill response site tour as appropriate.
  - Public Briefing/Press Conference
    - Work with the scheduler/Governor point of contact if the Governor prefers a more public briefing/press conference. The Liaison Officer should coordinate closely with the PIOs for this type of event.
    - Arrange for pool reporter(s) to be present.
    - Take B-roll (arrange with PIO).
    - Press conference specifics will depend on Governor's preferences, so work closely with the Liaison Officer and Governor's people.

**** Note: The Liaison Officer or the Sector/D5 Government Affairs Officer is the primary point of contact with elected officials, but he/she must share info with the PIO.***

Briefing Area Setup

- Display a map with an overview of the area (provided by GIS expert or Situation Unit Leader).
  - Provide a briefing packet with critical information. Include source of spill, amount, actions taken to date, amount recovered, public health concerns, air monitoring, number of

skimmers/vessels/responders in the field, number/type ordered (and source), spill countermeasures deployed/considered, etc.

- Have technical specialists on alert to attend if necessary.
- Ensure the room has enough space for the Governor, the Governor's security, and agency representatives if allowed. Coordinate with Logistics to ensure enough chairs will be available.

First 96-Hours Public Information Officer (PIO) Toolkit

Key Messages

Ensure the PIO prepares FOSC for any interviews, press conferences, or Town Halls. Preparation should develop the opening statement that covers the Who/What/When/Where/Why/How. Preparation should also include going over questions that are likely to be asked that highlights five good things, five bad things, and five 'ugly' things. Ensure the FOSC knows the target audience and develops key messages to communicate to that audience. Ensure the FOSC is familiar with the three keys to answering questions in an interview:

1. **A**nswer – address the specific question (however NEVER repeat the negative part of the question)
2. **B**ridge – redirect to your message ("What's important to remember is…", "However…", "I do want to highlight…", "The key issue is…")
3. **C**ommunicate – communicate your message

Key Messages (FOSC)

- As the Federal On-Scene Coordinator, my role is to work with all the agencies involved, the responsible party and local government representatives to ensure that everything possible is done to ensure a coordinated and effective response effort.
- There are three key elements of this response effort (ensure the three elements are agreed upon by the UC if there are more ICs than just the FOSC; it is recommended to have three supporting facts for each key element; consider selecting from the below key messages to support the three):

    1. First, an aggressive and effective response has been initiated and will be sustained as long as necessary. Foremost concern is to ensure public safety and safety of our responders. The response effort includes a variety of response equipment, including _____.
    2. Second, every effort will be made to minimize damage to the environment including protection of sensitive environmental areas, removal of as much oil from the water as possible, and taking care of wildlife. We have an effective tool called the Area Contingency Plan to guide the multi-agency effort during the early stages of the response. This plan has been created by federal, state, local and industry experts and has been exercised numerous times over the years.
    3. The third element of this response is to determine why this occurred in the first place so we can prevent similar events in the future. If we can determine what went wrong and take preventive measures hopefully we can reduce the possibilities of similar future responses (note that since investigations take time, this may not be encompassed in the first three key elements identified by the FOSC/UC).

Enclosure (6)

Key Messages (Oil Spills)

- In response to the_____oil spill, a unified command has been established to oversee and direct cleanup activities. Representatives from the United States Coast Guard, the state, and responsible party _will be working together in this effort.
- The unified command's top priorities are to protect public health and safety, limit environmental impacts and contain and clean up the spill as quickly and efficiently as possible.
- The oil is a hazardous material and can present significant health hazards, so the public is asked to stay away from area beaches and do not attempt to rescue wildlife.
- We are currently evaluating the situation and determining how much oil/material has been released. In this regard, some of our key objectives are to ensure the source of the spill has been secured to prevent further release, and that we mobilize sufficient resources to the scene to recover oil, and prevent the spill from causing further damage.
- Initial estimates of the amount of oil/chemical spilled are almost always inaccurate. But, to be safe, we are prepared to respond to the maximum potential that could be released.
- We ask the public not to attempt to rescue oiled birds or other wildlife on their own. They should instead report any sighting of oiled wildlife to_____.
- The public is further advised to avoid contact with the oil and to keep pets on leashes away from beaches where the product has accumulated.
- The cause of the incident is under investigation.

Key Messages (Public Safety)

- The safety of the public and incident responders is our number one priority.
- The public is advised to avoid contact with the oil and to keep pets on leashes away from beaches where the product has accumulated.
- People should not attempt to rescue oiled wildlife. Untrained individuals who attempt to rescue wildlife may cause more harm than good and may injure themselves in the process. If oiled animals are scared back into the water by pets or people, their chances of survival decrease dramatically.
- If someone comes in contact with the oil, he/she should wash it off with warm water and soap. For any serious injury or illness, seek medical attention.
- Air monitoring is/will be conducted to identify atmospheric hazards for spill responders. That data will be regularly provided to the Unified Command and local public health officials, who will determine whether risks to public health exist.
- The oil is/is not expected to pose any threat to the public. Air monitoring has determined that the air quality is/is not currently below OSHA occupational exposure limits.
- The local public health department is responsible for alerting the public if there is a health hazard. People may smell spilled petroleum product, even when there is no threat to public health. Some may experience headaches and/or nausea, as well. If discomfort, such as headaches, develops the affected person should consult his/her personal physician.
- The local Office of Emergency Management will handle the evacuation of communities threatened during a spill. If the OES decides there is a risk to public health, they will tell local radio and television stations to notify the public via the Emergency Broadcast System or emergency alerts via cell phone (i.e. Ready Philadelphia). Local law enforcement personnel would direct the evacuation, and possibly make public address announcements from vehicles being driven through the affected area.

Key Messages (Cleanup Methods and Considerations)

- It is important that only trained personnel conduct oil spill cleanup. Oil is a hazardous substance and highly toxic if handled improperly. It is important to stay off oiled beaches and keep children and pets at a safe distance from a spill site. If someone comes in contact with the oil, he/she should wash it off with warm water and soap. For any serious injury or illness, seek medical attention.
- Initial spill response will generally focus on stopping the oil leak first, conducting on-water containment and recovery, and then shoreline protection. Efforts will be made to get oil off the water first so that continued re-oiling of shorelines is minimized.
- The main tools used to contain and recover spilled oil are booms and skimmers. Boom is a plastic barrier that floats on top of the water with a skirt that hangs below that helps to keep oil contained or keep it away from sensitive areas. Boom is most effective in calm waters. If seas are too rough or currents are too fast, the oil will escape containment. Skimmers are equipped to skim oil off the surface of the water and store it in large tanks. Absorbent materials are also used to collect oil.
- Oil evaporates and disperses into the water, in a process called weathering. *Refer to "fate of oil" graphic.*
- Oil that is not recovered on water is likely to wash up on the shoreline causing further damage to wildlife and the environment. As a preventative measure, responders may place boom around sensitive areas to keep the oil at bay.
- The Area Contingency Plan, developed by the Coast Guard and State Environmental Protection Agencies, has geographic response strategies that identify environmentally sensitive sites. During an incident a decision will be made, using spill movement data and local expert observations, about which of the sites are in imminent danger and will, therefore, receive the earliest efforts at protection.
- Once shorelines become oiled, cleanup crews must determine the best methods to remove the oil from the environment without causing further damage. Much research has gone into developing these strategies. Different sites require different approaches. For instance, using a high-pressure wash on a rocky slope may simply push the oil further into the crevices, so instead hand scrubbing may be the best method. For sandy beaches, using shovels and small excavation equipment may be the most effective approach. The public should not attempt to employ their own strategies.
- Trained crews are instructed in how to dispose of the oil and oily materials. The recovered oil must be carefully quantified to determine how much was removed from the environment. Then it is transported to a hazardous materials landfill or recycled. When oil is disposed of improperly such as; household or public receptacles this may lead to contamination of municipal water supplies.
- Local beaches may remain closed during these cleanup activities. The local health department and/or the governing agency have the authority to close beaches for public safety reasons.

Key Messages (Volunteers)

- An aggressive cleanup operation is underway to secure the source, recover spilled oil and protect environmentally sensitive sites and wildlife that may impacted.

- There has been a tremendous outpouring of support and offers to help from the community. We appreciate the public's desire to volunteer and understand their concern.
- The Unified Command will make the decision on whether and how to safely use affiliated and/or unaffiliated volunteers. It will depend on a variety of factors including the type of oil spilled, the location and size of the spill, and most importantly the safety of volunteers.
- In order to keep the public informed about the status of the cleanup and to provide information on possible volunteer opportunities, a **Volunteer Hotline** has been established at (###) ###-####.
- At this time, a decision has not been made to use volunteers, and the public is asked to stay off beaches where oil has accumulated and to not attempt to rescue oiled wildlife.
- A volunteer can either be pre-trained or come forward during a spill event with no prior oil spill volunteer experience. Each spill response is unique, and the skills needed may be somewhat different each time.
- Volunteers must first register before participating in a spill response. They must be at least 18 years, in good health, capable of lifting 25-35 pounds and able to follow both written and oral directions. They must also be willing to attend required training.
- Volunteering does not necessarily mean cleaning up oil. Oil is a toxic substance and dangerous if handled or disposed of improperly. Only Hazardous Waste Operations and Emergency Management Response (HAZWOPER) trained personnel are authorized to conduct oil spill cleanup.
  - The best way to become a volunteer is to contact your local community volunteer center, nonprofit environmental group, local humane society, service organization, faith-based organization, or government agency volunteer program. Some of these organizations train volunteers to be long-term environmental monitors or to work in various types of disaster management.

Question & Answer (Q&A)

Tactics and Techniques

o Always… o Stick to the facts o Use your messages o Be concise o Stay in your lane o Speak plainly o Provide periodic updates o Correct mistakes o Be honest, direct, and courteous o Speak in sound bites o Use quotable quotes	o Never… o Go "off the record" o Over-answer o Use jargon and acronyms o Repeat negatives o Lie, bluff, or exaggerate o Speculate o Fake it if you don't know it

Q&A (Spill Response)

Q: How many gallons of oil are in a barrel?
A: 42

Q: How does this spill compare to the ATHOS I?
A: The M/T ATHOS I spilled approximately 250,000 gallons of heavy crude oil into the Delaware River, after striking a submerged object on 26 November 2004. Response operations led to the recovery of 8,498 gallons of oil, 221,910 gallons of oily water mixture, and 19, 197 tons of oily contaminated debris. More than 1,800 responders were involved in the response operation.

Q: How big is this spill compared to the 1989 Exxon Valdez, Alaska spill?
A: The Exxon Valdez spilled nearly 11 million gallons of crude oil, of the 42 million gallons onboard. That spill led to the Oil Pollution Act of 1990, which gave us many of the procedures, plans, and authorities we have today. No two responses are alike and caution should be taken when trying to compare them solely by the amount of product released.

Q: What is the Unified Command System? Who has authority?
A: When a significant event takes place the state, federal and local agencies establish a unified command to oversee the response. The unified command consists of the U.S. Coast Guard (the lead federal agency for marine spills) or the U.S. Environmental Protection Agency (lead federal agency for inland spills), State, and the responsible party. The incident commanders work together to plan and direct the response, using the best available technology. Experts from all of the entities involved work together in the planning, operations, logistics and finance sections, and fill command staff positions at the incident command post.

Q: Who investigates the spill?
A: The Coast Guard is investigating this incident and may assess fines and penalties according to state and federal laws and regulations. These investigations may lead to administrative penalties, or to civil and/or criminal charges.

Q: How do local government agencies fit in?
A: The state liaison officer, who is part of the unified command, establishes a multi-agency committee made up of local government stakeholders. Through the liaison officer, local government concerns and offers of assistance are reported to the incident commanders. If necessary a local representative may serve in the unified command as the local incident commander.

Q: How do you know where the oil came from if nobody confesses to spilling it?
A: The Coast Guard Marine Safety Laboratory in New London, Connecticut, as well as private analytical laboratories, use gas chromatography and mass spectrometry to produce a "fingerprint" of oil taken from the water or oiled habitat. Oil samples are also taken from vessels, pipelines or facilities that were in the area at the time of the spill. Matching or chemically consistent fingerprints between spill and source samples allow us to identify the responsible party.

Q: What is boom?
A: Boom is a floating physical barrier with a skirt underneath the water used to contain or divert oil spills. Boom floats on the surface of the water, but parts may extend above and below it. Because oil primarily floats on water, the boom is used to collect or direct floating oil. Boom is not a perfect containment device. Waves can carry oil over a boom and a current may force oil under it. Tidal shifts, debris, or ice can cause the boom to get hung up and limit its effectiveness. Boom is more effective directing oil which moves at a slight angle to the line of boom than as a barrier blocking

the oil's movement.

Q: How is boom allocated?
A: Boom is allocated based on priorities established by the Unified Command (UC). The UC is guided by protection strategies pre-identified in the Delaware Bay Area Contingency Plan (ACP) and then refined by spill trajectory modeling using real-time tide, wind, and current data following an incident. The main focus of spill response contingency planning is the identification and protection of environmental, cultural, and economic sites that have been identified by the Area Committee. Strategies such as containment or exclusion booming are included in the ACP and are designed to: 1) protect human health and safety, 2) protect identified environmental resources of concern, and 3) protect economic resources of concern.

Q: What are dispersants? How do they work?
A: Dispersants are chemicals, primarily surfactants, which are applied to spilled oil early in a spill in order to break down the oil into small particles and move the particles of oil into the water column, where they will eventually be broken down by bacteria and other microorganisms into carbon and oxygen. The primary goal of dispersant use is to move the oil from the surface waters, where the oil can pose a threat to sea birds and marine mammals for up to several weeks, to the water column, where the impact to marine resources are typically measured in days.

Q: What is in-situ burning?
A: In-situ burning means burning something in place — where it is. In some cases, this may be the most effective way to remove oil from the environment and protect sensitive ecosystems. But, like all response methods, it has drawbacks. Burning oil creates a noxious plume of smoke and airborne particulate matter, so this method of removing oil from water would only be considered in an area and under weather conditions in which the smoke would not affect human populations.

For a burn to work, the oil must be a certain thickness on the water to ignite, and it must be ignited within a few hours of being spilled, before the high-end, volatile chemicals evaporate. Not all oil is burnable. Specialized equipment must be readily available, and weather and oceanographic conditions must be favorable.

Q: Can you use biological agents? What are they, and how do they work?
A: Biological agents, approved by the EPA and the State, can be used during spill response. Biological agents (i.e. bioremediation) are used primarily as a final or "polishing" process to remove the remaining oil following initial cleanup activities or in areas where the more commonly used cleanup procedures are not applicable. Biological cleanup agents are typically chemical fertilizers that are applied to an oiled area to stimulate the growth of existing oil degrading bacteria. These bacteria will in turn breakdown the oil into carbon and oxygen. The efficacy of this process will depend on the type of oil spilled and environmental conditions.

Q: What should the public do if they see oil in a place where it shouldn't be (a spill)?
A: Spills can be reported to the US Coast Guard's National Response Center by calling 800-424-8802. For DE report the spill by calling (toll-free) 800-662-8802. For NJ report the spill by calling (toll-free) 877-827-6337. For PA report it by telephoning 484-250-5900. Agency websites: http://www.dnrec.delaware.gov, http://www.state.nj.us/dep and http://www.dep.pa.gov.

Q&A (Habitat and Wildlife)

Q: How does oil affect fish and wildlife?
A: Fish and wildlife can be harmed when their bodies contact oil. For aquatic birds and furred marine mammals, oil may cause feathers and fur to lose the ability to trap air and keep water out. These animals are then susceptible to hypothermia and reduced buoyancy. Aquatic birds that are oiled will often attempt to come ashore to escape the cold water. When oil coats fish and invertebrates, it can lead to smothering or tissue damage. There are also toxic effects from ingesting or inhaling petroleum products. Depending on the amount and type of oil ingested, fish and wildlife may die or experience a variety of toxicological effects including immune and reproductive system effects and disrupted organ function. In addition to direct effects on fish and wildlife, oil can also contaminate and persist for long periods in the habitats upon which these animals rely.

Q: What process does the animal go through after capture?
A: The bird or other animal is handled very carefully, in an attempt to limit stress while being evaluated for its ability to survive; then it is stabilized. Oiled wildlife must be kept warm, as oil ruins the normal ability of fur and feathers to retain body heat. The animal is first stabilized in the field, and then medically evaluated once it arrives at a facility. Sick or injured animals are provided veterinary care at this point. Once the animal is medically stable (usually 24-48 hours after arrival) it will be washed with warm water and an oil-dispersing detergent, dried and held in captivity until it is healthy enough to be released to the wild. On average, this entire process lasts a minimum of 7-10 days.

Q: How successful is rehabilitation?
A: That depends on several variables, such as the animal's species, physical condition prior to oiling, the time of year and weather conditions in which it was oiled, the length of time between initial contact with oil and the animal's capture, the type of oil, and whether there is an oiled wildlife care facility with trained veterinary staff nearby when it was captured.

Q: Can people volunteer to help?
A: Yes, there are a variety of jobs that volunteers can safely do in response to an oil spill. Hazardous materials training may be required for some of these jobs. Each incident is unique, however, and whether or not volunteers are used during a spill response is the decision of the unified command.

Q&A (Public Health and Safety)

Q: What about public health?
A: The public is advised to avoid contact with the oil and to keep pets on leashes away from beaches where the product has accumulated. In addition, they should not to attempt to rescue oiled wildlife. Untrained individuals who attempt to rescue wildlife may cause more harm than good and may injure themselves in the process. If oiled animals are scared back into the water by pets or people, their chances of survival decrease dramatically. If someone comes in contact with the oil, he/she should wash it off with warm water and soap, baby oil, or a widely used, safe cleaning compound such as the cleaning paste sold at auto parts stores.

The safety officer in the Unified Command will set up air monitoring equipment, as needed, to identify atmospheric hazards for spill responders. He will provide the data collected to the Unified Command and to the local public health department, which will determine whether the human population is endangered. The local public health department is responsible for alerting the public if there is a health hazard. People may smell spilled petroleum product, even when there is no threat to public health. Some may experience headaches and/or nausea, as well. If discomfort, such as headaches, develops the affected person should consult his/her personal physician.

Q: Who would handle an evacuation of the community?
A: This is extremely rare; however, the local Office of Emergency Services would handle the evacuation of communities threatened during a spill. If the OES decides there is a risk to public health, they will tell local radio and television stations to notify the public via the Emergency Broadcast System and viable cell phone alerts. Examples of alert apps in the area include "Ready Philadelphia," and mobile alerts offered by New Jersey and Delaware offices of emergency management. Local law enforcement personnel would direct the evacuation, and possibly make public address announcements from vehicles being driven through the affected area.

Q: What should people do if they think they've been exposed to toxins?
A: Contact your local Public Health Department, and then get medical attention from your personal physician, just as you would for any illness or injury. Anyone without a personal physician will be advised on further action by the health department staff.

Q. What if you can't find a Responsible Party?
A. In the case of a "mystery spill" – where the spiller can't be identified, located, or is insolvent– a rapid response will be funded by either the State or Federal Oil Spill Liability Trust Fund. In many cases, the state fund can be reimbursed by the federal fund if not, and the amount is significant, a mechanism will be activated for the oil industry to replenish the account. Since the Oil Spill Prevention and Response Act of 1990 were enacted, the account has never had to be replenished with a higher fee.

Q&A (Dispersants)

Q: Why are dispersants used on an oil spill?
A: Dispersants are used to reduce the environmental impact created by oil slicks on the water surface. Dispersants accelerate the weathering and biological breakdown of oil at sea and reduces the impact of oil on sensitive near shore environments.

Dispersants are also highly effective in reducing exposure of sea birds and marine mammals to oil as most sea birds are oiled by slicks on the surface of the sea or in near shore coastal habitats. Undispersed slicks and residual oils are a persistent threat to near shore birds, mammals, and intertidal communities due to the toxicity of, and contact with oil. Dispersed oil is less "sticky" than undispersed oil; therefore, the adhesion and absorption onto surfaces and sediments of dispersed oil is greatly reduced compared with the original oil slick.

In a spill incident, environmental trade-offs of protection and sacrifice will occur. These decisions are not taken lightly by response authorities and will be based on the best available advice and

scientific data to achieve a net environmental benefit.

Q: What are oil spill dispersants?
A: Dispersants are a class of chemicals specifically designed to remove oil from the water surface. These chemicals reduce the interfacial tension between the oil and water and help the creation of small oil droplets, which move into the water column facilitating quicker natural biological breakdown (biodegradation) and dispersion. By decreasing the size of the oil droplets, and dispersing the droplets in the water column, the oil surface area exposed to the water increases and natural breakdown of the oil is enhanced. This removes the threat of the oil from the water surface to within the water column.

Dispersion is a natural process that occurs in surface slicks as wind and wave action break up the surface slick. However, naturally dispersed oil droplets tend to re-coalesce and return to the water surface and reform as surface slicks. The addition of chemical dispersants allows the wind and wave action to then carry the small oil droplets away and dilute the concentration of the droplets in the water column; these dispersed oil droplets are then targeted by indigenous oil-consuming microbes where they are broken down into the ultimate components, carbon dioxide and water.

Q: On what basis is the decision made to use dispersants in a spill incident?
A: The main basis for decision making in determining whether oil spill dispersant will be used is whether the application of the chemical dispersant to the spilled oil be effective and minimize the overall environmental impact of the oil spill. Time is a key determinant.

Except for the impact on marine birds and mammals, the most damaging effect of oil spills is when the oil strands on shorelines or enters restricted shallow waters like estuaries. Dispersants are a prime and vital response tool to stop oil coming ashore or from entering sensitive near shore environments especially when weather and sea conditions do not allow the use of oil containment and recovery equipment.

Dispersant use may be authorized by the Region II or III Regional Response Team in these circumstances when there is a possibility of an impact of oil on a more sensitive near shore habitat, or wildlife impacts are possible. For example, when an approaching oil slick may impact sensitive marine mammal breeding areas, or endangered species such as migratory birds. RRT Regions II and III have pre-authorized a small area in the Delaware Bay where dispersants can be used for testing on an oil spill to determine efficacy.

Q: What are the negative effects of dispersants on the environment?
A: The acute toxicity of dispersed oil generally does not reside in the dispersant but in the more toxic fractions of the oil. Dispersing oil into the water in situations where there is little water movement or exchange, such as shallow embayment's, increases exposure of subsurface, benthic organisms and fish to the toxic components of the oil.

Fish and other marine life in the larvae stage or juvenile stages are more prone to the toxicity effects of oil and dispersants. Therefore it is unlikely dispersants will be used near commercial fisheries, important breeding grounds, fish nurseries, shellfish aquaculture, etc., unless it is to protect a more important environmental resource.

Sea grasses and coral reef communities are particularly sensitive to dispersed oil because instead of

the oil "floating over" the reefs and submerged sea grass beds the oil/dispersant mixture in the water column will come into direct contact with these sensitive ecosystems. Generally there is reluctance by spill responders to use dispersants in shallow waters less than 30 feet deep, although there may be situations where using dispersants could prevent impacts to near shore habitats and wildlife.

Q: Who authorizes the use of dispersants during an oil spill response?
A: Under the Oil Pollution Act of 1990, the Regional Response Team is vested with the authority over dispersant use for marine oil spills. The National Contingency Plan (NCP) provides that the Federal On-scene Coordinator, with concurrence from the EPA and the State representatives, may authorize the use of dispersants.

Criteria detailed in the Sector Delaware Bay Area Contingency Plan must be met before the Federal On-scene Coordinator can authorize dispersant use. If it is determined that a spill does not meet the pre-approval, then the final decision for a dispersant-use determination rests with the RRT.

Q: How effective are oil spill dispersants?
A: Chemical dispersants aid the natural dispersion of oil by reducing the oil/water interfacial tension and, along with the natural motion of the sea, allow the breakup of oil on the water into very fine droplets.

Effectiveness of oil dispersion by chemical dispersants at sea is governed by a range of conditions and include the type and chemistry of the oil, degree of weathering of the oil (time), the thickness of the oil slick, type of dispersant, droplet size and application ratio, prevailing sea conditions (wave mixing energy), and sea temperature and salinity.

Q: Will dispersants work on all types of oils?
A: No, dispersants will not work on all oil spills. The first rule in combating oil spills with dispersants is that the oil must be amenable to dispersant use. It is also well understood by oil spill response agencies that dispersants are only effective on certain types of oils and the first priority is always to determine the spilled oil's physical and chemical properties in order to assess combat options. Non-dispersible oils include: 1) non-spreading oils (pour point is higher than sea temperature), 2) highly viscous oils (> 2000 Centistokes (cSt) - a measurement of the mobility of oil), 3) a water-in-oil emulsion has formed (mousse).

A "rule of thumb" is a dispersant may have a reasonable success rate if the oil is continuing to flow or spread as a fluid (not just sheening). Unfortunately this "rule of thumb" is only partly correct. The properties of these oils are determined by their chemical compositions which vary widely. For the purposes of determining the use of dispersants at various sea temperatures the important properties are: 1) the specific gravity (or API gravity), 2) pour point, and 3) viscosity.

Q: How quickly do we need to apply dispersants to an oil spill?
A: As quickly as possible! There is only a limited "window of opportunity" to use chemical dispersant in an oil spill incident. This is primarily due to the changing properties of the spilled oil due to weathering of the oil, but is also governed by the location and speed of movement of the slick onto the foreshores or into estuarine environments. This window of opportunity may be as little as only a few hours or if the conditions are favorable, a day or two.

Q: What are the health and safety issues associated with the use of chemical dispersants? A: Response workers must be careful to ensure that personnel do not get sprayed by the dispersants, or come in contract with any of the overspray. Vessels must only be deployed under safe sea conditions.

Coast Guard Responds to Spill Incident

Date: _____
Contact:_____

News Release

Coast Guard responds to TYPE spill in LOCATION

PHILADELPHIA — Coast Guard crews are responding to a report of a TYPE spill near LOCATION, TIME/DATE.

REPORTING SOURCE notified Coast Guard Sector Delaware Bay of the spill, which took place at LOCATION. Initial reports indicate the spill is coming from a VSL/FACILITY/SUSPECTED SOURCE due to SUSPECTED CAUSE.

The SUSPECTED SOURCE was reportedly CARRYING/TRANSFERRING nearly MAX POTENTIAL gallons of PRODUCT, but it is not known how much of the product was discharged.

Coast Guard Sector Delaware Bay pollution responders and state environmental officials are on scene investigating the impact of the spill. A broadcast notice to mariners is in place advising mariners to transit the area with caution due to pollution.

The cause of the incident is under investigation. Drug and alcohol tests will be performed.

News Release

RESPONSE TYPE spill response continues in LOCATION

PHILADELPHIA — Members of the unified command continue to coordinate PRODUCT spill recovery operations in LOCATION, DATE.

Responders have recovered more than ----- gallons of oily water mixture and -- yards of solid soiled waste. More than ----- feet of containment boom and -- responders have been deployed to conduct shoreline assessments and recover as much product as possible.

Shipping traffic is still required to maintain minimum safe speed from ------ to ------ to minimize the impact to clean-up operations. The unified command will continue to closely monitor the situation and will adjust restrictions to commercial and recreational boating traffic accordingly.

The unified command consists of representatives from the UC MEMBER AGENCIES.

WHAT HAPPENED, WHERE at approximately TIME/DATE.

There have been no reports of impacted wildlife.
Address public safety concerns/messaging.

The cause of the incident is under investigation. Drug and alcohol tests will be performed.

Unified Command Approves Dispersants

Joint Information Center

(Unified Command logos/names here)

News Release

Unified Command has approved the use of dispersants for the RESPONSE NAME

PHILADELPHIA — The Unified Command has approved the use of the chemical dispersant Name in order to break up the oil slick and protect shoreline habitat, seabirds and marine mammals from becoming oiled due to the PRODUCT spill recovery operations in LOCATION, DATE.

Dispersants break down oil into smaller particles helping it to disperse and sink below the surface. Before dispersants are used a range of criteria must be met:

- The application of dispersants must be 3 – 200 miles off shore and not within a National Marine Sanctuary.
- The application of dispersants must provide an environmental benefit for species at risk and/or species of special concern.
- The application of dispersants must be done safely and in accordance with standard marine and aviation practices.

Federal and state trustee agencies identified the LIST OF SPECIES as species of special concern and of significant risk of injury from this oil spill, especially if the spill were allowed to spread and hit sensitive habitats and shorelines.

Wildlife and resource agencies believe that these species will be benefited by the use of dispersants and will monitor the operations as appropriate for these species.

(PROVIDE ANY INFORMATION, AS NECESSARY ON FISHERIES AND PLANS FOR ANY SEAFOOD TAINTING PANELS)

The unified command consists of representatives from the UC AGENCIES.

THERE HAVE BEEN NO REPORTS OF IMPACTED WILDLIFE.

The cause of the incident is under investigation. Drug and alcohol tests will be performed.

###

Fishing Activity Suspended

Date: _____

Contact: _____

Joint Information Center

(Unified Command logos/names here)

News Release

Fishing activity suspended due to SPILL RESPONSE in LOCATION

PHILADELPHIA — Members of the unified command have suspended all fishing for human consumption in the areas affected by the INCIDENT NAME until at least DATE, or when state health officials have determined that fishing can safely be reopened.

The AGENCIES are collecting samples of fish and shellfish from the area impacted by the spill. Samples of FISH are being collected from various locations in WATER BODY and along the coast. The samples will be tested for toxic chemicals that are found in the oil, which can accumulate to dangerous levels in fish and shellfish. The main toxins of concern in the oil that was released are a group of chemicals called polycyclic aromatic hydrocarbons. Long-term exposure to high levels of PAHs is associated with an increased risk of developing cancer.

AGENCY's safety guidelines call for avoiding consumption of any fish or shellfish from WATER BODY until analysis of the collected samples is completed. Visible oil or oily smell are obvious indications of contamination, but fish and shellfish from the spill area could still pose a potential risk even if there are no visible signs of contamination.

In addition, health officials are asking people to stay away from shore areas until cleanup efforts are completed. After beaches are reopened, people who find oil deposits along the shore should report them to cleanup officials by telephoning CONTACT.

Safety advice for beaches in the spill area:

- Avoid direct contact with spilled oil, which can cause skin irritation. Prolonged contact can cause rashes.
- If you get oil or tar on your skin, wash it off with soap and water, and be certain to wash your hands before eating.
- If you get oil on your clothing, wash it in the usual way. There is no need to use harsh detergents, solvents or other chemicals to wash oil from skin or clothing.
- Do not burn driftwood or other debris that may be contaminated with oil.
- Use common sense. Do not swim in water with an oil slick and do not swallow water from the area. Oil-contaminated water can cause choking and lead to severe pneumonia if it gets into the lungs.

- Avoid prolonged exposure to fumes in closed spaces.
- Fish and shellfish caught from waters outside the spill area remain as safe to eat as before the spill, but marine life from the spill area should be avoided until the evaluation of its safety is completed.

THERE HAVE BEEN NO REPORTS OF IMPACTED WILDLIFE.

The cause of the incident is under investigation.

###

Volunteer Hotline Established

Joint Information Center

(Unified Command logos/names here)

Date: _____
Contact:_____

News Release

RESPONSE NAME Volunteer Hotline Established

PHILADELPHIA — The unified command has activated a volunteer hotline at 000-000-0000 for people who would like to contribute to the spill recovery operations near LOCATION, DATE.

The Volunteer Hotline will provide updates on the spill response and will allow potential volunteers to provide their contact information, availability, and applicable skills.

"We appreciate the public's outpouring of support and their desire to help out in the unfortunate event," said NAME, POSITION. "We are doing everything we can to minimize impacts to the environment and protect the wildlife that lives here. At this time, we are evaluating how we may best use volunteers in our response in a way that is both safe for the volunteers and productive."

Volunteers have been used in previous oil spill responses, with activities coordinated through the unified command. By calling the Volunteer Hotline number, prospective volunteers will get the most up-to-date information on whether their time and skills will be needed.

Volunteers and others should stay away from the spill site and not attempt to rescue oiled wildlife, as this may hamper clean-up efforts and increase the danger to both wildlife and humans. Oil is a toxic substance and only those with hazardous materials training are authorized to clean up oil. For the safety of both the public and the animals, only trained wildlife specialists will handle oiled wildlife.

The public can help at this time by reporting any oiled animals to 000-000-0000 (potentially Tristate Bird Rescue). This facility uses modern equipment and facilities and has trained staff to care for the oiled wildlife. Personnel experienced in animal capture and handling will respond at the earliest opportunity, presenting the best chance for wildlife survival.

The public's cooperation is greatly appreciated.

For more information on volunteering, visit WEBSITE.

###

Fact Sheet Checklists

Fact sheets produced and/or released by the PIO/JIC may include the following:

1st Fact Sheet

- Facts about the incident as known.
- Exclusion zones and evacuations.
- Total spill potential, expressed in gallons.
- MSIB information.
- Air monitoring information.
- Wildlife impacts/hotline number.
- Claims line (if established).
- Equipment/resources deployed.
- Number of personnel responding.
- Contact phone numbers for media.

Subsequent Fact Sheets

- Amount and type of product spilled.
- Location and time of the spill.
- Cause of the spill.
- Vessel information.
- Injuries or casualties.
- Responsible party.
- Trajectory of the oil.
- Public safety message.
- Evacuations.
- Air monitoring information.
- Environmental impacts.
- Beach closures.
- Wildlife impacts.
- Fishery closures.
- Cleanup contractors.
- Agencies responding.
- Actions taken.
- Resources applied and numbers.
- Personnel deployed.
- Future actions.
- Special considerations (dispersant use, port of refuge).
- Status of the investigation.
- Third party claim line.
- Oiled wildlife hotline.
- Volunteer hotline.
- Cost of the spill.
- Amount of product recovered.

News Release

FACT SHEET: RESPONSE TYPE spill response near LOCATION

PHILADELPHIA — Members of the unified command continue to coordinate PRODUCT TYPE spill recovery operations in LOCATION, DATE.

INCIDENT SUMMARY. Emergency response operations will continue and are being closely monitored until long term salvage or oil pollution mitigation plans can be finalized.

Unified Command:

- Members consist of the WHO.
- Agencies contributing to the response include WHO ELSE.

Current activity:

- Responders continue oil/water mixture removal from the SUSPECTED SOURCE.
- Crews continue to tend the hard boom while removing and replacing the sorbent boom used to collect the oil.
- Responders deployed skimmers.
- Responders place recovered oil into a tank where it will decant, settle and separate, for later quantification.
- Number of wildlife affected, being treated, released.

Quantities:

- VESSEL had a maximum capacity of ------ gallons aboard at the time of the incident.
- ------ gallons of oil/water mixture recovered to date.
- The Oil Spill Liability Trust Fund is currently at $--- million. More information on the OSLTF is available at http://www.uscg.mil/npfc/About_NPFC/osltf.asp.

Equipment and personnel on scene:

- ----- boats, and aircraft
- ----- skimmers
- ----- skiffs
- ---- holding tank for recovered oil
- ---- vacuum truck
- ---- personnel from -------
- ---- on scene recovery capacity compared to state requirements---- and federal requirements----
  * Note: Only use this metric if the on scene capacity is greater than state and federal requirements.

Safety:

- Coast Guard Sector Delaware Bay is requesting all vessel traffic inbound and outbound of ----- travel with no wake as a safety measure for responders working in and on the water.

Wildlife:

- 000 wildlife impacts have been reported at this time. Crews will monitor for oiled wildlife for the duration of the spill cleanup. Anyone seeing oiled wildlife should report it to 000-000-0000.

Fishery Closure:

- LOCATION

Ship Facts:

- Built in ----.
- Length -----
- Beam ____
- Draft -----
- ----- Flagged
- Max capacity of the tanks is approximately ------ gallons.

Unified Command

Joint Information Center

(Unified Command logos/names here)

Date: _____
Contact: _____

News Release

FACT SHEET: Unified Command

PHILADELPHIA — A Unified Command (UC) is indispensable to response activities and requires a clear understanding of the roles and responsibilities of each participating organization. Success requires unity of effort, which respects the chain of command of each participating organization, while harnessing seamless coordination across jurisdictions in support of common objectives.

Use of the Incident Command System (ICS) is an important element across multijurisdictional or multiagency incident management activities. It provides a structure to enable agencies with different legal, jurisdictional, and functional responsibilities to coordinate, plan, and interact effectively on scene. As a team effort, the UC is made up of Incident Commanders (IC) from agencies with jurisdictional authority and/or functional responsibility for the incident, as well as staff for coordinating planning, operations, finance, and support. This allows each agency or IC to provide joint support through mutually developed incident objectives and strategies established at the command level. Each participating agency maintains its own authority, responsibility, and accountability, while the UC provides a forum for these agencies to make consensus decisions.

The need for UC arises when incidents:

- Cross geographic boundaries (e.g., two states, international boundaries);
- Involve various governmental levels (e.g., federal, state, local);
- Impact functional responsibilities (e.g., Search and Rescue, fire, oil spill, EMS); or
- Some combination of the above.

The UC is responsible for:
(1) developing a single set of objectives;
(2) using a collective, strategic approach;
(3) improving information flow and coordination;
(4) creating common understanding of joint priorities and restrictions;
(5) ensuring that no agency's legal authorities are compromised or neglected; and
(6) optimizing the combined efforts of all agencies under a single plan.

UC representatives must be able to:

- Agree on incident objectives and priorities;
- Have the capability to sustain a 24-hour-7-day-a week commitment to the incident;
- Have the authority to commit agency or company resources to the incident;
- Have the authority to spend agency or company funds;
- Agree on constraints/limitations, priorities, decisions and procedures;
- Agree on an incident response organization;
- Agree on the appropriate Command and General Staff position assignments to ensure clear direction for on-scene tactical resources;
- Commit to speak with "one voice" through the Public Information Officer (PIO) or Joint Information Center (JIC), if established;
- Agree on managing sensitive information and operational security issues;
- Agree on logistical support including resource ordering procedures; and
- Agree on cost-sharing and cost accounting procedures, as appropriate.

In general, a successful UC is a team. A UC is to skillfully use the strengths of each IC and acknowledges each representative's unique capabilities and authorities. A UC has a shared understanding of the situation and agrees on common objectives to bring the incident to closure. A UC is open to different perspectives and knows that contentious issues may arise, but that ICS inherently relies on the UC framework to provide the forum to resolve problems and find solutions.

###

Boom

Joint Information Center

(Unified Command logos/names here)

Date: _____
Contact: _____

News Release

FACT SHEET: Boom

PHILADELPHIA — Spilled oil may be contained or diverted by using a floating physical barrier called boom. Boom floats on the surface, but parts may extend above and below it. Because oil primarily floats on water, the boom is utilized to collect or direct floating oil.

Boom length is measured in feet, and it is not unusual for thousands of feet of boom to be deployed for even a modest spill. Boom sizes are described in inches of freeboard and skirt. A 6-by-12 boom has a six-inch-high freeboard and 12-inch-deep skirt. Boom typically is manufactured in high-visibility colors, such as white, yellow or orange, for easy tracking by response teams and for the safety of vessels operating nearby.

Boom is not a perfect containment device. Waves can carry oil over a boom and a current may force oil under it. Debris or ice can also limit the effectiveness of boom. Boom is more effective directing oil which moves at a slight angle to the line of boom than as a barrier blocking the slick's movement. Such circumstances may require replacing light boom with boom having higher freeboard and deeper skirt. Multiple lines of boom are more effective at containing oil than a single line.

Limitations on the use of boom include the time required to get it to the scene, load it on boats, carry it to the spill and deploy it. Boom also has to be stored within reasonable traveling distance of a potential spill. Once used, boom has to be de-contaminated of the waste oil or chemical before it can be stored. If sorbent boom is used, it has to be disposed of safely once it has been contaminated with oil or chemical waste. Some types of boom have operational limitations, such as the loss of ballast or buoyancy if the water- or air-filled sections are breached by abrasion or handling.

A single string of boom often will serve several purposes simultaneously. Typical tasks for boom include:

- Encirclement – laying one or more barriers of boom around the source of the spill to keep it from spreading or around a section of slick to hold it in place for recovery. Tankers transferring cargo may be encircled by boom as a precaution, even though there is no spill.
- Diversion – setting one or more lines of boom at angles into or across a moving slick’s path to guide it toward an area where it can be confined and recovered, or to let it safely pass a sensitive area. Diversion is primarily used near shore on rivers. It is most effective where currents are weak and there is little wave action.
- Collection – towing boom in a “V,” “U,” “J,” or teardrop configuration through or around a slick to gather oil together for recovery or burning.

- Recovery – placing sorbent boom where it will contact floating oil and absorb or adsorb some of it for later recovery, or similarly using weir boom to catch oil and transport it to a skimmer.
- Exclusion – stringing boom around un-oiled areas to keep oil out. The exclusion booming may also divert moving oil away from a sensitive area.

Although different types of boom may look different, virtually all boom has five common components:

- Flotation device – keeps the boom at the water's surface, where floating pollutants are.
- Freeboard – the part that rises above the water's surface and prevents waves from washing pollutants over the top.
- Skirt – similar to freeboard but below the surface, the skirt prevents the current from washing floating pollutants under the boom.
- Ballast – this is the weight at the bottom of the skirt that keeps it hanging vertically against a current.
- Tension line or strength member – cables, chains or lines extending the length of the skirt or freeboard and, like the main boom cable, chain or boom, attached at the end.

In general, boom with a high freeboard and short skirt is called fence boom, because it prevents the pollutant from moving across the surface. A boom with a longer skirt and shorter freeboard is a curtain boom, and is good to prevent pollutants from moving just below the surface. Some boom includes both characteristics.

Similar to fence and curtain boom is tubular containment boom, such as Texas Boom. Tubular boom has at least two sections…one or more air-filled tubes above the water, for flotation and to keep oil from crossing the boom on waves, and one or more water-filled tubes below the water for ballast and to keep oil from passing beneath the boom.

Sorbent boom made of absorbent or adsorbent material to collect and hold oil within the boom itself. It's most effective with thin layers of pollutants and light winds or currents. Once soaked to capacity, the boom can be recovered and the collected oil squeezed out. Once soaked, it is heavier than simple barrier boom and so needs extra effort to remove from the water.

Recovery boom, such as three-weir boom, has four sections. An air-filled tube extending above the water for buoyancy and to keep oil from passing over the boom. A water-filled tube extending below the surface for ballast and to keep oil from passing beneath the boom. A discharge tube which collects oil from inlets between the air- and water-filled tubes and moves it the length of the boom to a recovery device. A smaller air-filled tube to keep the discharge tube afloat. Recovery boom not only holds floating pollutants in place, but is an active part in recovering pollutants from the water.

A frequent problem in the use of boom is the fact that each end of the boom must be anchored in place. On a small stream, it can be anchored to trees or rocks on land; in a harbor, it may be attached to piers or seawalls. On open water, however, the ends must be literally anchored, using lines attached to weights on the lake or sea bottom, or they must be attached to boats. The use of a boat to anchor one end of a boom means that boat cannot be used for any other assignment, and boats may be in short supply.

Oil Types

Joint Information Center

(Unified Command logos/names here)

Date: _____
Contact: _____

News Release

FACT SHEET: Oil Types

PHILADELPHIA — Oil spills along coasts affect many parts of the environment, such as water, ocean bottom, shoreline sea birds, marine mammals, shellfish, and people.

Major oil spills most commonly involve oils shipped in large quantities at sea, such as crude oil/petroleum, No. 1 and No. 2 fuel oils, diesel oil, Bunker C oil, kerosene, and jet fuel. Oils are compounds, complex mixtures that vary widely in composition.

Oils can be described as belonging to one of five groups:

- I very light oils (jet fuel, gasoline);
- II light oils (diesel, No. 2 fuel oil, light crude, home heating);
- III medium oils (most crude oils);
- IV heavy oils (heavy crude oils, No. 6 fuel oil, Bunker C);
- V group (very heavy oils).

The different types of oils behave in different ways during a spill, so the response to a spill varies, depending on the type of oil and quantity released.

Most oil has a density less than water and floats. The natural tendency of oil is to spread in a thin layer on the surface of the water as a sheen or film. Such sheens are extremely difficult to recover and do not remain for long periods; however, they do represent a continued threat to fish and wildlife, particularly nesting birds. Under turbulent conditions, oil is more likely to disperse into the upper layers of the water.

Oil changes rapidly once it is spilled into water. These changes are enhanced by the processes of evaporation, dilution and emulsification (when water incorporates into the oil, forming a stable mixture). Some changes help dissipate spilled oil, but others can make it linger in the water, on the bottom, or on the shore. Evaporation tends to

remove the more toxic components and reduces the toxicity of spilled oil. Emulsification, on the other hand, can slow degradation of spilled oil.

Weathering describes the physical, chemical, and biological changes that happen to crude oil and refined petroleum products once they begin to interact with the watery environment. Ultimately, the more toxic elements of oil products spilled in the marine, estuarine, or freshwater environment are broken down. Exposure to air, sunlight, wave and tidal action, and certain microscopic organisms degrades and/or disperses oil. The rate of degradation and dispersion depends on many factors like the type of oil, weather, temperature, and the type of shoreline and bottom.

Very light oils are highly volatile, which means they evaporate quickly, usually completely within one to two days after a spill. These oils are also flammable and contain high concentrations of soluble toxic compounds. Very light oils can mix with water and kill aquatic life that lives in the upper layers. Cleanup is usually not necessary, or possible, with spills of very light oil.

Light oils are moderately volatile, but can leave a residue of up to one-third of the amount spilled after a few days. These oils contain moderate concentrations of soluble toxic compounds. Light oils leave a film or layer on intertidal resources with the potential of long-term contamination. Cleanup can be very effective on spills of light oil.

Medium oils are less volatile, leaving a residue of about two-thirds of the amount spilled after 24 hours. These oils are less likely to mix with water, and oil contamination of intertidal areas can be severe and long-term. The impact of medium oils on waterfowl and fur-bearing mammals can also be severe. Cleanup is most effective with spills of medium oil if conducted quickly.

Heavy oils have far less evaporation or dilution potential, and they weather more slowly. These oils do not readily mix with water. Spills of heavy oils can cause severe contamination of intertidal areas and possible long-term contamination of sediments. Heavy oils have severe impacts on waterfowl and furbearing mammals. Shoreline cleanup in spills of this type is difficult and long-term under most conditions.

Group V oils, mostly very heavy oils, can float, sink, or hang in the water. These oils can become oil drops and mix in the water, or accumulate on the bottom, or mix with sand and then sink. As a rule, these oils are less toxic than lighter oils, however they pose significant problems to responders because they are extremely difficult to track or predict.

Spill response teams of federal, state and local agencies, organizations and industry representatives have prepared contingency plans for oil spill emergencies.

###

Tarball

Joint Information Center

(Unified Command logos/names here)

Date: _____
Contact: _____

News Release

FACT SHEET: Tarball

-

PHILADELPHIA — Tarballs are remnants of oil spills or natural oil seeps in the Ocean. When crude oil from a seep, spill, or a heavier refined product floats on the ocean surface, its physical characteristics change.

During the first few hours of a spill or natural release, the oil spreads into a thin slick. Winds and waves tear the slick into smaller patches that are scattered over a much wider area. Various physical, chemical, and biological processes change the appearance of the oil. These processes are generally called "weathering."

Initially, the lighter components of the oil evaporate much like a small gasoline spill. In the cases of heavier types of oil, such as crude oil, much of the oil remains behind. At the same time, some crude oils mix with water to form an emulsion that often looks like chocolate pudding. This emulsion is much thicker and stickier than the original oil. Winds and waves continue to stretch and tear the oil patches into smaller pieces, or tarballs. While some tarballs may be as large as pancakes, most are coin-sized. Tarballs are very persistent in the marine environment and can travel hundreds of miles.

Weathering processes eventually create a tarball that is hard and crusty on the outside and soft and gooey on the inside, not unlike a toasted marshmallow. Turbulence in the water or beach activity from people or animals may break open tarballs, exposing their softer, more fluid centers. Scientists have not been very successful at creating weathered tarballs in the laboratory and measuring the thickness of the crusty outer layer. Therefore, we don't know how much energy is needed to rupture a tarball. We do know that temperature has an important effect on the stickiness of tarballs. As air and water temperatures increase, tarballs become more fluid and, therefore, sticky— similar to an asphalt road warmed by the summer sun. Another factor influencing stickiness is the amount of particulates and sediments present in the water or on the shoreline, which can adhere to tarballs. The more sand and debris attached to a tarball, the more difficult it is to break the tarball open. These factors make it extremely difficult to predict how long a tarball will remain sticky.

For most people, an occasional brief contact with a small amount of oil, while not recommended, will do no harm. However, some people are especially sensitive to chemicals, including the hydrocarbons found in crude oil and petroleum products. In general, we recommend that contact with oil be avoided. If contact occurs, wash the area with soap and water, baby oil, or a widely used, safe cleaning compound such as the cleaning paste sold at auto parts stores. Avoid using solvents, gasoline, kerosene, diesel fuel, or similar products on the skin. These products, when applied to skin, present a greater health hazard than the smeared tarball itself.

There is no magic trick to making tarballs disappear. Once tarballs hit the beaches, they may be picked up by hand or by beach-cleaning machinery. If the impact is severe, the top layer of sand containing the tarballs may be removed and replaced with clean sand. The number of tarballs found on the beach depends on several factors: tanker traffic, wind patterns, sea currents, whether an oil spill or seep occurred recently, and how often the beach is cleaned.

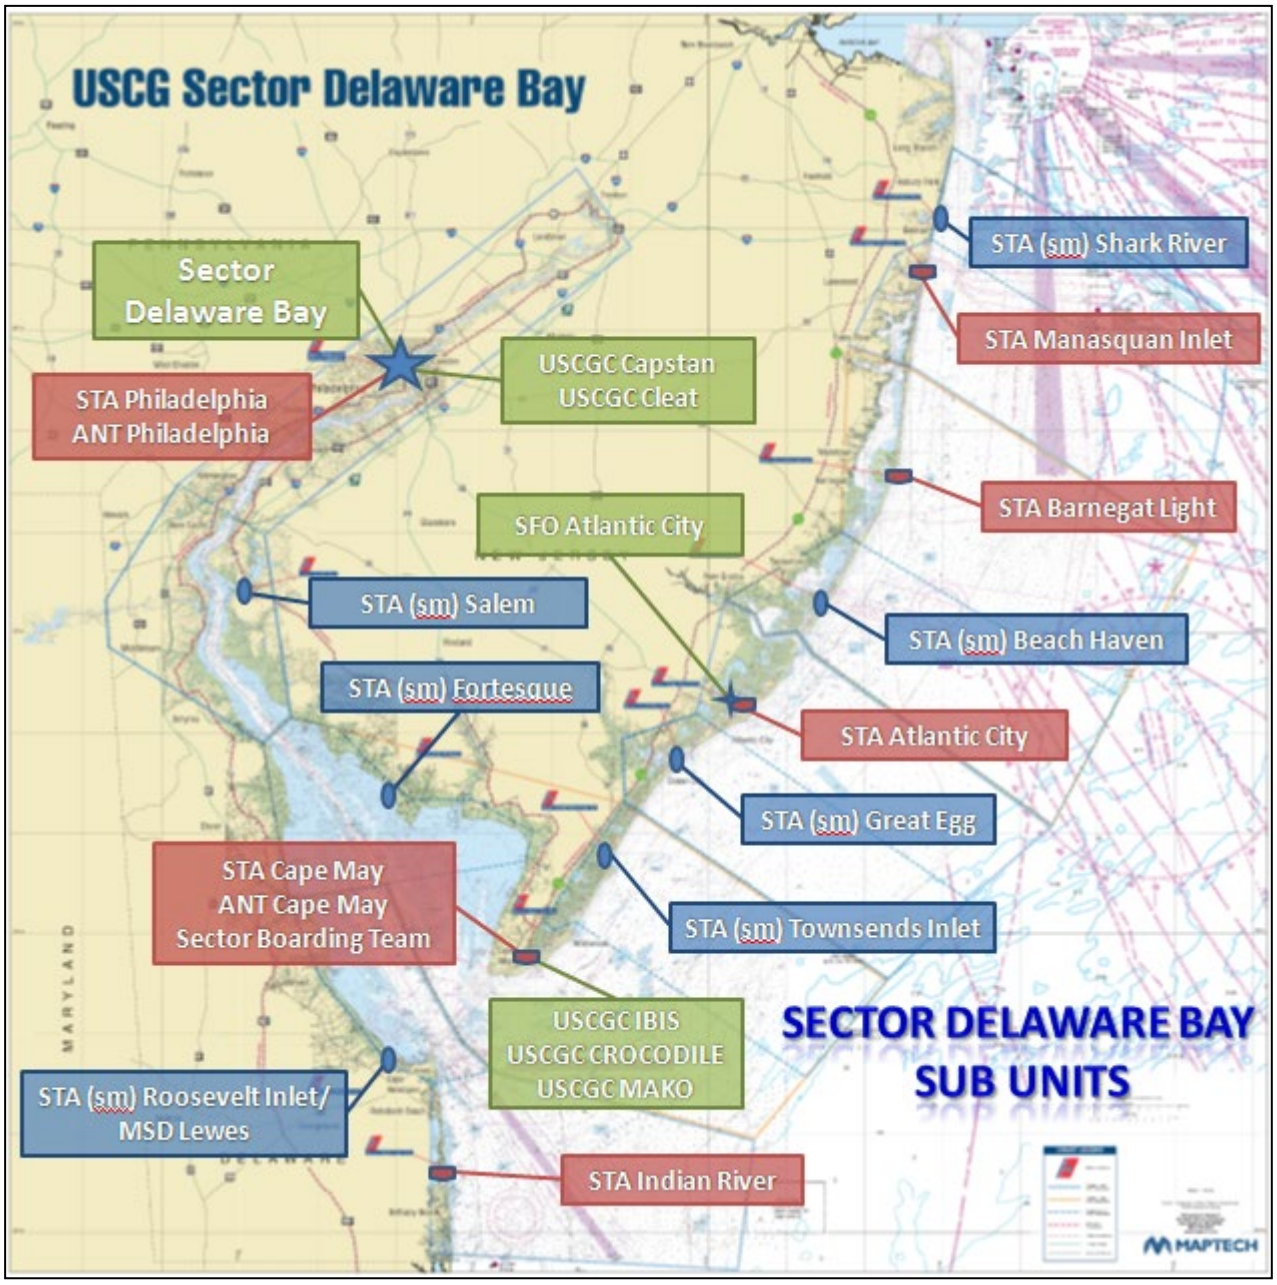
Sector Delaware Bay Units



Enclosure (9)

Transition from a Responsible Party Managed Spill to a Federally Managed Spill

9721 TRANSITIONING FROM A RESPONSIBLE PARTY MANAGED RESPONSE TO A FEDERAL RESPONSE

To ensure a seamless transition in managing spill response operations from a responsible party (RP) managed response to a Federal managed response the Federal On-scene Coordinator should consider the following actions:

Federal On-scene Coordinator

- Draft a Letter of Federal Assumption [Link to sample Letter Section 9722]

Finance Section

- MLCLANT (A-fcp) will assume the duties and responsibilities as the incident's Finance Section Chief (FSC)
- If directed by the FOSC, make the necessary contracting arrangements to retain the commercial spill management team
- The FSC will evaluate and determine the best method of contracting existing spill response clean-up companies
- The FSC will keep the National Pollution Funds Center (NPFC) informed of financial issues
- The FSC will coordinate with NPFC to determine the best method for handling claims generally and specifically claims dealing with the decontamination of private craft
- The FSC will determine and order required staff to maintain oversight of & direct operations of the finance section

Logistics

- Identify and Coast Guard Logistics Section Chief
- Order in a Coast Guard Supply Unit Leader
- The Logistics Section Chief will work with the FSC to establish a resource ordering process and coordinate closely with the commercial spill management team's Logistics Section Chief to ensure a smooth transition
- The newly designated Coast Guard Logistics Section Chief will assume approval authority for resource decisions in addition to oversight

Operations

- Determine if Strike Team and/or Sector Delaware Bay Personnel will be designated as Division/Group Supervisors or contractors will be used in that capacity. If contractors are used as Division/Group Supervisors, implement the following protocols for the Federal On-scene Coordinator Representatives (FOSCRs) to follow [Link to FOSCR Protocol Section 9723]
- Order in Coast Guard personnel to support extended operations commitment

- Strike Team and or Sector Delaware Bay Personnel will ensure that submission of Form 5136s are completed daily and submitted by 1800
- Strike Team and/or Sector Del. Bay Personnel will be located at every established staging area and decontamination area and will complete a Form 5136 daily

Planning

- Obtain a full accounting of response resources including overhead personnel
- Establish a visual resource tracking system and evaluate potential areas for demobilization

Documentation

- The Documentation Unit Leader will ensure that the decision to transition is documented and placed in the historic record.

Example of Federal Assumption Letter

9722 Example of Letter of Federal Assumption

In the event that the Responsible Party notifies the Coast Guard that they are no longer going to finance spill removal operations a Letter of Federal Assumption should be sent back to the RP. Below is a sample letter.

Dear,

On 26 November 2004, the Cypriot-flagged tank vessel ATHOS I struck a submerged object as the vessel approached the CITGO Asphalt Refining Company in West Deptford, New Jersey, releasing 265,000 gallons of Venezuelan crude oil into the Delaware River. On 26 November 2004, my office issued a Notice of Federal Interest designating the vessel's owner, Frescati Shipping Company Limited, as the Responsible Party.

I understand that the Responsible Party, having exceeded the statutory limits of liability as set forth in 33 USC 2704, requests that the federal government assume responsibility for the continued response efforts. Per our discussions, effective 21 March 2005, the U.S. Coast Guard will assume financial responsibility for the clean up. I further understand that the Responsible Party will pay for all costs, including all reasonable or required amounts owed to contractors, for work performed before 21 March 2005. With regard to your concern about opening yourself up to the defense of non-cooperation against any effort to recoup sums over the statutory cap, it is the National Pollution Funds Center's view that the fact that a responsible party stops paying for a response, in good faith reliance on its having paid or incurred removal costs and damages in excess of its liability limit, is not in itself a failure to provide all reasonable cooperation and assistance within the meaning of the Oil Pollution Act sections 1003 and 1004. Whether a responsible party has provided all reasonable cooperation and assistance will be determined on a case-by-case basis in light of all the relevant circumstances.

I would like to take this opportunity to extend my personal thanks to the Responsible Party for their professionalism over the past three months and for helping to facilitate a smooth and seamless transition to a federally funded response, allowing us to continue clean up operations uninterrupted. Please contact [ ] or me if you have any questions.

Sincerely,

Orders to

Federal On Scene Coordinator Representatives

“What to Look For”

9723 Protocols for Federal On-Scene Coordinator Representatives (sample)

Now that the response to the M/V ATHOS I incident has been federalized, the Coast Guard has assumed responsibility for not only the financial and operational oversight, but also the health and safety of the responders. In order to provide the best stewardship and protection of government interests, there must be an increased level in federal oversight of operations and incident management. This policy outlines the roles and responsibilities of the Federal On-Scene Coordinator Representatives.

ROLES

A Federal On-Scene Coordinator Representatives (FOSCR) is the designated representative of the Federal On-Scene Coordinator, per the National Contingency Plan (NCP). In this capacity, the FOSCR has the responsibility to ensure coordination, direction and to review the work of others involved in the response to ensure compliance with the NCP and lead agency-approved plans applicable to the response. It is the responsibility of the FOSCR to ensure the job is done safely, efficiently, and in accordance with the direction and plans of the Unified Command.

Each day, the FOSCR will report in to the designated location and receive the day's assignment. Obtain a copy of the relevant ICS204 and any other mission-specific instructions in order to best understand the tasking of each operational element. The ICS204 will outline what resources, both personnel and equipment, are assigned to each staging area/division/group. It is the responsibility of the FOSCR to verify the use of the assigned resources in the field. Using the guidance below, conduct daily "contractor oversight," forwarding any unresolved questions or issues to the Deputy Operations Section Chief.

RESPONSIBILITIES

1. At the beginning of each work shift, before departing for assigned location, obtain current copies of all applicable operational plans, including current ICS204.
2. Review all plans, ensuring familiarity with UC-approved operations.
3. Arrive at assigned location and check in with Task Force Leader. Discuss understood operational assignment.
4. Collect copy of "daily" (CG5136) from contractors and verify accuracy. Ensure all personnel and equipment listed on "daily" are on scene and actively employed. Compare resources to those listed on ICS204. Note any discrepancies. See Key Items section for examples of items to look for.
5. Maintain ICS214 (Unit Log) to note all interactions with field personnel.
6. Upon completion of day's shift, return to ICP. Make sure all "dailies" are signed and make 3 copies. Give the original to the Cost Unit Leader and provide copies to the Time Unit Leader, the Documentation Unit Leader and the relevant response contractor.
7. Make copies of the ICS214 and provide copies to Documentation Unit Leader and the Deputy Operations Section Chief.
8. Check out with Deputy Operations Section Chief, being sure to note any unresolved issues, concerns, or problems from the field.

KEY ITEMS

Below, is a general list of items to be watchful for when conducting contractor oversight. The list is not exclusive, add appropriate items as necessary.

1. First and foremost: all issues shall be discussed *immediately* with the Task Force Leader to gain a mutually agreeable resolution. Do not depart until the situation has been corrected or resolution has been obtained through the Deputy Operations Section Chief.

2. The following is a list of key points requiring verification of FOSCRs
    a. Verify with Task Force Leaders that any newly reporting field personnel have current HAZWOPER training. The Site Safety Officer maintains records of all responder HAZWOPER certificates.
    b. Look for use of PPE appropriate to operations and Site Safety Plan. Correct any safety issues immediately.
    c. Verify equipment and personnel resources used in the field are listed on the ICS204 and the CG5136. Note all discrepancies on the CG5136 and your ICS214.
    d. Verify that equipment and personnel resources listed on the CG5136 are being effectively used for operations. Discuss discrepancies with Task Force Leader and note all unresolved discrepancies on the CG5136 and your ICS214.
    e. Verify efficiency of operations/equipment/personnel use. If resources are not being used effectively, note on ICS214 and discuss with Task Force Leader.
    f. Monitor field activities for safe practices and operations conducted IAW approved Site Safety Plan. Immediately correct unsafe practices through discussions with Task Force Leader and note on ICS214. Consult Safety Officer if necessary.
    g. Record progress of field crews. If an alternate strategy for oil removal is identified, discuss with Task Force Supervisor, note on ICS214 and make recommendation to Deputy Operations Section Chief.
    h. Routinely walk assigned response area with Task Force Leader to evaluate progress. Discuss recommendations and concerns about progress, operational assignments, resource allocation and influences of tides/weather on productivity with the Task Force Leader. Coordinate with Task Force Leaders on end points for cleaning areas, ensuring proper oil removal techniques as specified in the MAT work orders (attached to the 204's) are being utilized.
    i. Be familiar with sensitive areas in assigned divisions and ensure field crews do not enter areas without required authorization (see Cleanup Methods and Endpoints).
    j. For questions about clean-up procedures, waste handling/disposal, decontamination, etc, consult copies of current, UC-approved operational plans. If issue is not clearly resolved by reviewing plans, discuss with Task Force Supervisor. Contact Deputy Operations Section Chief to discuss unresolved issues.
    k. Sharps are to be disposed on in the red containers in the possession of each Task Force Leader.

3. Documentation requirements:
    a. Completed CG5136, with signature. Make required copies and file as outlined in #6 under Responsibilities.

b. FOSCRs are to note all interactions with the Task Force Leaders on their ICS214s in order to properly document all instructions, corrections, and discussions.
c. It is particularly important to note any issues that require Deputy Operations Section Chief intervention, including the all circumstances relating to the incident and final disposition of the issue.
d. If an alternate strategy for oil removal is identified, discuss with Task Force Supervisor, note on ICS214 and make recommendation to Deputy Operations Section Chief.
e. Document all issues concerning site safety on an ICS SSP form H. Have Task Force Leader sign. Forward the original to the Site Safety Officer and a copy to the Documentation Unit Leader.

4. If at any time you are uncertain about any issues, including whether there is a legitimate reason for concern or if you notice an infraction but are not confident in the remediation action to pursue, contact the Deputy Operations Section Chief

APPLICABLE INCIDENT PLANS

All FOSCR should ensure they have current copies of all UC-approved plans in their possession prior to departing for day's assignment.

Guidance for the Transition From

Coast Guard FOSC

to

EPA OCS

9760 Guidance for Transitioning On-scene Coordinator Responsibilities from the Coast Guard to the Environmental Protection Agency

Introduction

The Coast Guard and Environmental Protection Agency can request transferring On-Scene Coordinator (OSC) responsibilities to the other agency for releases and/or discharges which occur within its zone.

Purpose

To ensure a consistent and orderly transfer of On-Scene Coordinator's (OSC) responsibility and authority from Commanding Officer Sector Delaware Bay to the Environmental Protection Agency Regions II or III.

Circumstances when the Coast Guard can Transfer OSC to the EPA

The most common circumstances in which the Coast Guard OSC would transfer OSC responsibilities to the EPA for action are if:

- The release originates from a Hazardous Waste Management Facility.
- The release does not require an immediate removal action
- A time critical response that evolves into or is determined to be a remediation action as a result of a site assessment
- A removal has been secured before cleanup is complete. The Coast Guard OSC should consult with the EPA regional officials and affected state to discuss adding the site to the National Priorities List for further cleanup
- Coast Guard policy requires that removal be secured when prompt action is no longer necessary and substantial remediation methods must be used to completely remove the remaining contamination.

When requesting a transfer of the OSC authority a "Memorandum Transferring Federal On-Scene Coordinator Responsibility" shall document the transfer of authority. [Link to example Agreement Section 9761]

Guidance for ensuring a smooth transition

To ensure that the transfer of OSC responsibilities is conducted in an orderly manner the following steps should be undertaken:

- Ensure that the appropriate EPA regional office has been contacted and requested to provide an EPA agency representative to the Incident Command/Unified Command
    - The EPA Regional Response Center contact numbers are:
        - Region II 732-548-8730
        - Region III 215-814-9016
- Ensure the EPA Agency Representative is provided with all pertinent incident information. Review guidance in Section *2120 Transfer of Command* of the

Base Plan to ensure a smooth transition [Link to Transfer of Command Section 2120]

- If the incident is complex, discuss with the EPA Agency Representative about placing EPA personnel in Operations and Planning
- Document decision to Transfer OSC responsibility
- Ensure that a "Statement of Agreement Transferring Federal On-Scene Coordinator Responsibility" is signed.

Statement of Agreement

To

Transfer From

Coast Guard to EPA Form

9761 Statement of Agreement to Transfer Federal On-Scene Coordinator (OSC) Authority Between the U.S. Coast Guard (USCG) and U.S. Environmental Protection Agency (EPA) - Region 2/3

This agreement documents the transfer of OSC responsibility for the discharge or release[1]

at (location): _____

from (source): _____

on or about (time): _____, (date): _____ 20_____

and otherwise identified as (case name or number) _____

This transfer of authority is (check one):

❑ from USCG _____ to EPA Region _____
(Sector Delaware Bay) (Region number)

—OR—

❑ from EPA Region _____ to USCG _____
(Region number) (Sector Delaware Bay)

It is hereby agreed:

That this transfer of responsibilities to the accepting OSC is COMPLETE and will include all associated investigation, cleanup or removal, disposal, public relations, incidental paperwork and filing of required reports.

That this transfer will further remain in effect until such time as the accepting OSC has determined that there is no further danger to the public health or welfare.

That this agreement does not preclude continued mutual support between the Coast Guard and EPA as deemed appropriate for this incident.

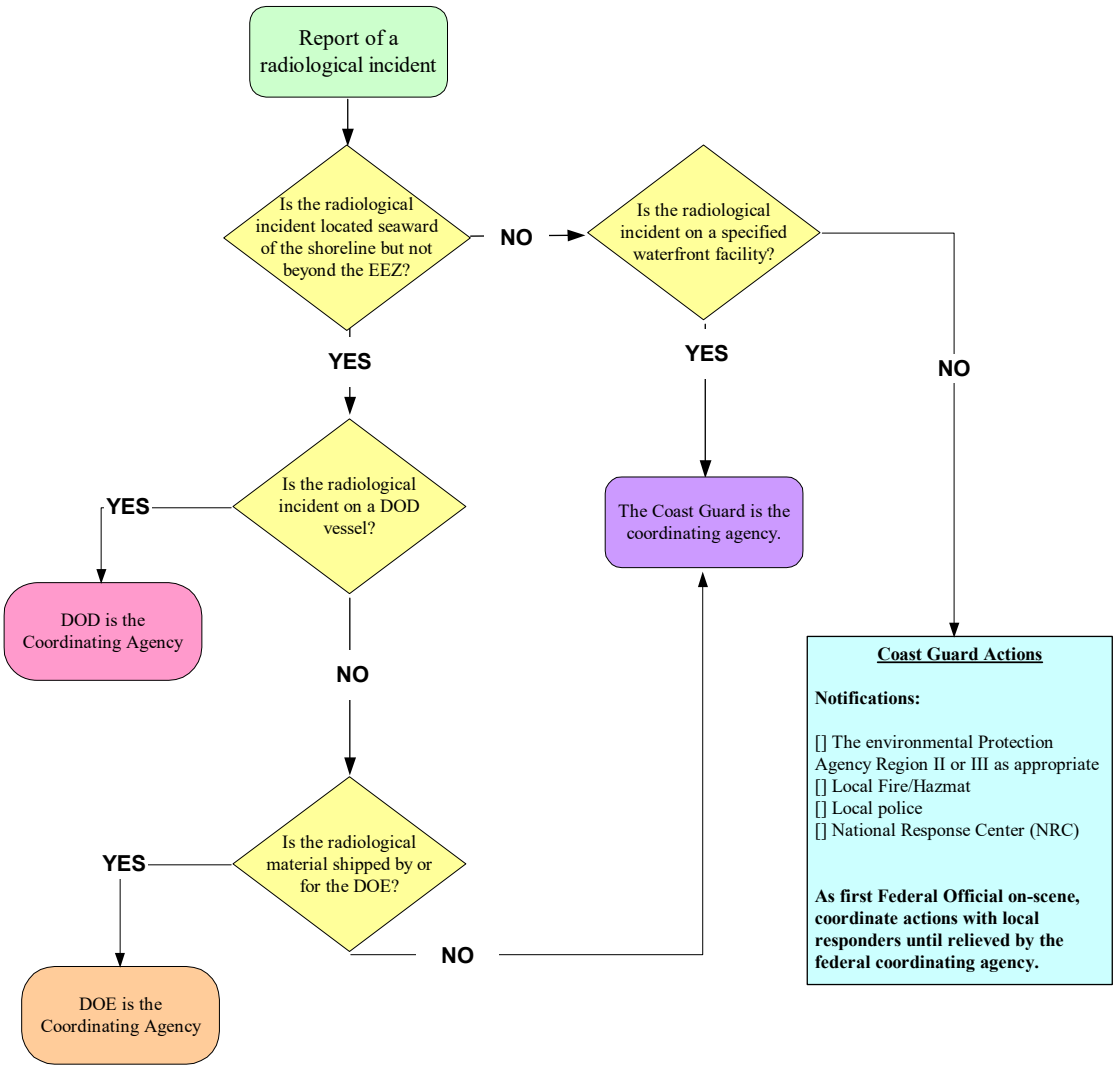
9780 Determining if the Coast Guard is the Coordinating Agency (has jurisdiction)



FOSC's Considerations for a Federally Managed Spill

9799 FEDERALLY MANAGED SPILL RESPONSES

To ensure a properly managed federal response the Federal On-scene Coordinator should consider the following actions:

Federal On-scene Coordinator

- ❑ Assume federal responsibility for response. [Link to Incident Command Job Aid]

Finance Section

- ❑ MLCLANT (A-fcp) will assume the duties and responsibilities as the incident's Finance Section Chief (FSC)
- ❑ The FSC will evaluate and determine the best method of contracting existing Oil Spill Response Organizations [Link to List of Sector Delaware Bay OSROs with BOAs]
  [Link To OSRO response equipment within 300 miles of Sector Delaware Bay]
  An on line list of OSROs with BOAs is available at
  http://webapps.mlca.uscg.mil/fdiv/fcp-2.html
- ❑ The FSC will keep the National Pollution Funds Center (NPFC) informed of financial issues
- ❑ The FSC will coordinate with NPFC to determine the best method for handling claims generally and specifically claims dealing with the decontamination of private craft
- ❑ The FSC will determine and order required staff to maintain oversight of & direct operations of the finance section

Logistics

- ❑ Identify and Coast Guard Logistics Section Chief
- ❑ Order in a Coast Guard Supply Unit Leader
- ❑ The Logistics Section Chief will work with the FSC to establish a resource ordering process and coordinate closely with the commercial spill management team's Logistics Section Chief to ensure a smooth transition
- ❑ The newly designated Coast Guard Logistics Section Chief will assume approval authority for resource decisions in addition to oversight

Operations

- ❑ Evaluate and select the Oil Spill Response Organization that can provide an appropriate response [Link to List of Sector Delaware Bay OSROs with BOAs]
  [Link To OSRO response equipment within 300 miles of Sector Delaware Bay]
  An on line list of OSROs with BOAs is available at
  http://webapps.mlca.uscg.mil/fdiv/fcp-2.html

- ❑ Ensure an Authorization to Proceed document is sent to selected OSRO(s).

- Determine if Strike Team and/or Sector Delaware Bay personnel will be designated as Division/Group Supervisors or contractors will be used in that capacity. If contractors are used as Division/Group Supervisors, implement the following protocols for the Federal On-scene Coordinator Representatives (FOSCRs) to follow [Link to FOSCR Protocol Section 9723]
- Order in Coast Guard personnel to support extended operations commitment
- Strike Team and or Sector Delaware Bay personnel will ensure that submission of Form 5136s are completed daily and submitted by 1800
- Strike Team and/or Sector Delaware Bay Personnel will be located at every established staging area and decontamination area and will complete a Form 5136 daily

Planning

- Obtain a full accounting of response resources including overhead personnel
- Establish a visual resource tracking system and evaluate potential areas for demobilization

Documentation

- The Documentation Unit Leader will ensure that all required documentation be placed in the historic record.

Annex ZZB

Alternate Response Tool Evaluation System

ARTES Guide

Alternative Response Tool Evaluation System (ARTES)

The Alternative Response Tool Evaluation System (ARTES) was designed by workgroups of Regional Response Team (RRT) II and III. It provides On-Scene Coordinators (OSCs) with a method for evaluating non-conventional, alternative response countermeasures that may be considered for use at an oil or chemical spill. The ARTES may also be used for evaluating proposed conventional countermeasures.

During a spill, OSCs may be approached by vendors, responsible party representatives, Special Teams personnel, or members of their staff requesting that a non-conventional alternative cleanup countermeasure be considered. This type of countermeasure could be another viable "tool" for the OSC to use during a spill. The ARTES provides an evaluation program that will help the OSC and RRT decide whether to implement alternative cleanup tools. The ARTES evaluates a response tool on its technical merits and not economic factors.

It should be fully understood and noted that an OSC need not wait for the ARTES recommendation when deciding whether to use a response tool. ARTES is designed to help, not hinder, the OSC. It should also be understood that completion of an ARTES evaluation does not mean that a product is pre-approved, recommended, licensed, certified or authorized for use on an incident. The ARTES is solely designed to evaluate a products appropriateness for use during a specific incident under specific circumstances, or as a pre-evaluation to identify likely conditions which favorable outcomes are anticipated by using a product.

The ARTES may be used both before and during an incident. If an OSC would like to consider using an alternative response tool for pre-spill planning, the ARTES may help evaluate the tool. ARTES uses an Alternative Response Tool Team (ARTT) to rapidly evaluate a tool and provide feedback to the OSC in the form of a recommendation. This enables the OSC to make a well-informed decision on the use of an alternative tool.

One of the advantages of ARTES is that it provides a management system for addressing the numerous proposals submitted by vendors during a spill. Needs of a spill change as the response progresses. ARTES requires evaluations only on an as-needed basis. That is, once an operational need is identified, then an evaluation can be initiated. Having a record of proposals on file will enable the OSC to address alternatives for any future needs. Subjecting all proposals to the same degree of evaluation ensures that vendors are considered on a "level playing field."

ALTERNATIVE RESPONSE TOOL EVALUATION SYSTEM (ARTES)

I. PURPOSE

The Alternative Response Tool Evaluation System (ARTES) is designed to provide On-Scene Coordinators (OSCs) with a method for evaluating non-conventional, alternative response countermeasures that may be considered for use at an oil or chemical spill. An OSC may use the ARTES for evaluating proposed conventional alternative countermeasures as well. During a spill, OSCs may be approached by vendors, responsible party representatives, Special Teams personnel, or members of their staff requesting that a non-conventional alternative cleanup countermeasure be considered. This type of countermeasure could be another viable "tool" for the OSC to use during a spill. The ARTES provides an evaluation program that will help the OSC and Regional Response Team (RRT) decide whether to use alternative cleanup tools. The ARTES evaluates a response tool on its technical merits and not economic factors.

It should be fully understood and noted that an OSC need not wait for the ARTES recommendation when deciding whether to use a response tool. ARTES is designed to help, not hinder, the OSC.

II. SCOPE

A. ARTES Can be Used Both Before and During an Incident (Figure 1)

1. If an OSC would like to consider using an alternative response tool for pre-spill planning, the ARTES may help evaluate the tool. The OSC is strongly encouraged to seek Area Committee input and then incorporate this input, if appropriate, into a formal request for evaluation to the RRT Spill Response Countermeasures Workgroup (SRCW). The SRCW then forms a Response Tool Subcommittee (RTS), which, in turn, uses the ARTES to evaluate the tool and provide feedback to the OSC. Not all tools will require RRT approval. Those that do, however, will be presented before the RRT concurrently by the RTS and OSC to obtain approval.

2. During a spill OSCs may be considering the use of an alternative response tool either by their own volition or through input from their staff, vendors, responsible party representatives, or members of the Special Teams. ARTES uses an Alternative Response Tool Team (ARTT) to rapidly evaluate a tool and provide feedback to the OSC in the form of a recommendation. This enables the OSC to make a well-informed decision on the use of an alternative tool.

3. One of the advantages of ARTES is that it provides a management system for addressing the numerous proposals submitted by vendors during a spill. The OSC can direct all proposals to the ARTT, which is then responsible for prioritizing them

according to need and developing a file on each proposal. Needs of a spill change as the response progresses. Having a record of proposals on file will enable the OSC to address alternatives for any future needs. Subjecting all proposals to some degree of evaluation ensures that vendors are considered on a "level playing field."

Figure 1

III. PROCEDURES FOR FORMING AN RTS AND AN ARTT:

A. The Response Tool Subcommittee (RTS)

1. If an OSC would like the SRCW to evaluate a response tool, a written request for evaluation is submitted. The SRCW will convene the RTS.

2. The RTS should consist of persons knowledgeable about spill response tools and countermeasures. It should include state representation for those states included in the OSC's area of responsibility.

3. Once the RTS is activated, they shall begin the ARTES process.

B. The Alternative Response Tool Team (ARTT)

1. During a spill, the OSC may elect to set up an Alternative Response Tool Team. Whether the OSC needs to set up an ARTT depends on a number of factors. However, the major guideline for setting up the ARTT is when evaluation of recommended tools becomes such a burden to the OSC that operational decisions are impeded.

2. The ARTT should be composed of personnel knowledgeable about response tools. It can range from one to several personnel, depending on the size of the incident. Provisions may need to be made for 24-hour operations. Examples of personnel who could participate as a member of the ARTT include:

    a. NOAA Scientific Support Team
    b. National Strike Force
    c. EPA Environmental Response Team
    d. Coast Guard Research and Development Center
    e. Navy Supervisor of Salvage
    f. Oil and Hazardous Materials Simulated Environmental Test Tank
    g. OSC staff
    h. State representative
    i. Responsible Party representative
    j. Cleanup contractor representative

3. It is recommended that the ARTT be located in the Planning Section of the Unified Command organization.

4. The ARTT is not designed to relieve the responsible party of the obligation to evaluate and approve response tools for cleanup operations under the RP's supervision. The OSC is encouraged to forward all proposals for alternative response tools to the responsible party unless they require RRT approval. Those response tools requiring RRT approval may be subjected to ARTES.

IV. THE ALTERNATIVE RESPONSE TOOL EVALUATION SYSTEM PROCESS

A. Determining the Need for Evaluation

1. OSCs who request an evaluation of a tool for a spill of opportunity will express that need by submitting a written request for evaluation to the Spill Countermeasures Workgroup.

2. During a spill incident it is important for the ARTT to conduct a needs survey to determine the present and future needs of the OSC.

    a. The ARTT will circulate the Operational Needs Survey (ART-ONS; Enclosure 1), through the Unified Command structure. The survey should pass through the Operations Section, Planning Section, and the OSC. It is best that the survey be hand-carried by a member of the ARTT. The survey could also be completed during Section Chief staff meetings.

    b. How often the Needs Survey is conducted will depend on the size of the spill. For large incidents the survey should be circulated daily.

B. Prioritizing Alternative Response Tool Proposals (ARTP) According to Need

1. The SRCW is responsible for prioritizing OSC requests for an alternative response tool evaluation for future spills.

2. During major pollution incidents it may become necessary to use a prioritization system due to the large volumes of ARTPs submitted. The ARTT will use the data from the Operational Needs Survey to prioritize all ARTPs into one of four categories:

    a. Could meet immediate operational need; classify as Type A ARTP.
    b. Could meet future operational need; classify as Type B ARTP.
    c. Could possibly improve operations; classify as Type C ARTP.
    d. All other ARTPs; classify as Type D ARTP.

3. The ARTPs should be placed in four separate files according to this classification.

4. Each ARTP should be logged into a log book and/or a computer database. The log should include the date and time the ARTP was submitted, a brief description of the ARTP, the name of the solicitor, and designation according to type of response need addressed.

C. Collecting All Necessary Data to Conduct a Thorough Evaluation

1. Starting with the highest-priority ARTPs (Type A), the RTS or ARTT shall ask the solicitor to complete the Proposal Worksheet (PWS; Enclosure 2). The purpose of this worksheet is to collect as much data as possible on a response tool so that a complete evaluation can be performed. Instructions for completing the PWS are included in Enclosure 2. All the information identified in the PWS must be collected. If information is not available on a particular subject, it must be so stated on the worksheet.

2. The RTS or ARTT should work closely with the Alternative Response Tool solicitor to obtain the information needed to complete the worksheet. The data collected must be deemed acceptable by the RTS or ARTT before an evaluation can be done. The PWS is not all-encompassing. The RTS or ARTT may request additional information as needed. Once the PWS and attachments are received, the RTS or ARTT will review the data and complete the Data Collection Worksheet (DCW; Enclosure 3).

3. The Data Collection Worksheet may serve as the cover sheet for the RTS's or ARTT's evaluation report.

D. Conducting the Evaluation

1. Starting with Type A ARTPs, the RTS or ARTT will conduct a detailed review of the data submitted in accordance with the Alternative Response Tool-Data Collection Worksheet. The RTS or ARTT will rely on their response experience when evaluating ARTPs.

2. The RTS Chairperson or the ARTT Leader shall spearhead the evaluation. It is not the intention of this instruction to dictate how the evaluation is to be conducted. It is recommended that the RTS/ARTT members review the ARTPs in detail then convene for general discussion on the advantages and disadvantages of the ARTP. When evaluating the ARTP, the RTS or ARTT should consider all the factors listed on the data collection worksheet and any additional factors not listed that may be a concern. During a spill, key considerations are the effectiveness and effects of the response tool under the spill conditions (physical setting, oil type and degree of weathering, shoreline type, ecological sensitivity, etc.). Urgency of need will dictate the length of time to conduct an evaluation. If a pressing need for an alternative response tool develops, the ARTT may be encouraged to make a swift evaluation.

3. An optional Alternative Response Tool Evaluation Summary Worksheet (ESW) (enclosure 4), has been developed to assist the RTS or ARTT in categorizing an ARTP in summary fashion. The ESW uses a rating system to determine how well the ARTP meets certain operational criteria. An average rating is computed which enables the RTS or ARTT to compare the ARTP with other ARTPs and to select the best alternative. Instructions for completing the ESW are included in enclosure 4.

4. Type D ARTPs need not be evaluated if there is no need as identified by the Operational Needs Survey. However, they should be kept on file for consideration as needs change.

E. Preparing the Final Recommendation

A recommendation report should be prepared once an ARTP has been evaluated. In time-critical situations a written report may not be feasible. In these cases a verbal report would suffice. However, a written report should be completed when time is available. The Alternative Response Tool Evaluation Summary Worksheet can be used as a cover sheet for the recommendation report.

F. Presenting the Recommendation

1. The RTS:
   a. The RTS presents their recommendation to the SRCW, who reviews the recommendation report and either:
      (1) Accept the report and prepare it's presentation for the RRT. If the SRCW accepts the report, they must pass judgment on the recommendation. They may agree or disagree with the recommendation. If they disagree, they must provide written arguments and attach them to the report.
      (2) Return the report to the RTS for a secondary review because of incomplete information or for a consideration that was overlooked.

   b. Once the SRCW has accepted the report, the report is brought before the RRT for consideration.

   c. If the RRT accepts the alternative response tool for use at future spills it should be noted that this acceptance is not a formal pre-authorization of the response tool.

2. The ARTT:

a. Once the ARTT has produced their recommendation report on a response tool, they may present their report by two methods: at a Unified Command Section Chiefs meeting, or hand-carried through the Unified Command structure. The method of presenting the report will depend on the need of the response tool.

(1) *Immediate operational need (Type A ARTP)*
Present the report to the Planning Section Chief. Recommend that the Planning Section Chief meet with the Operations Section Chief as soon as possible. The Planning Section Chief should have the ARTT leader accompany him/her when presenting the report. Hand-carry the report to the Operations Section Chief. Once the Operations Section Chief reviews and accepts the report, the report should be routed to the Unified Command Staff.

(2) *Future operational need (Type B ARTP)*
Present the report to the Planning Section Chief. Once the Planning Section Chief reviews and accepts the report, the report should be presented to the Unified Command. Since the response tool addresses a future operational need, the recommendation report may not need to be hand-carried to the Unified Command but may be presented at a Unified Command Section Chiefs meeting.

(3) *May improve response operations (Type C ARTP)*
Present the report to the Planning Section Chief. Since there is no immediate or future operational need, this alternative response tool can be presented at a future Unified Command Section Chiefs meeting for consideration by the Unified Command.

G. Filing ARTPs, Data and Recommendation Reports

1. When an OSC has approved or disapproved the ARTP, it shall be noted on the recommendation report before filing the report.

2. All information collected and developed by the ARTES process should be filed in an organized fashion and secured from release to unauthorized personnel.

It should be fully understood and noted that an OSC need not wait for the ARTES recommendation when deciding on whether

or not to use a response tool. ARTES is designed to help, not hinder, the OSC.

ALTERNATIVE RESPONSE TOOL - SUMMARY EVALUATION WORKSHEET (SEW)

The Summary Evaluation Worksheet is a scoring worksheet, to be filled out by the ARTES review committee, with a copy sent to the solicitor or vendor and another archived with the DRAT.

INSTRUCTIONS FOR COMPLETING THE SEW

1.In Items A through C, ensure that no spaces are left blank.

2.In Item D, for each evaluation factor in the Summary Evaluation Matrix, check the best rating description. Check Non-Applicable (N/A) if a given evaluation factor doesn't apply to the tool/product under review.

3. Compute an average score for the response tool/product by totaling the numbers checked for all applicable factors (ignore any checked N/A values), then dividing this total by the total number of applicable factors (the factors for which you did not check N/A). Write this score in the Average Score space.

3.In Items E and F, write in relevant comments and the RTS's or ARTT s final recommendations.

INSTRUCTIONS FOR USING THE COMPLETED SEW

1.Review the average scores of each Alternative Response Tool Proposal (ARTP) evaluated to select the best alternative. While generally, the ARTP with the highest average score is likely to be the one selected, two caveats apply:

- Average scores are useful only for comparing similar technologies.
- ARTPs that receive a score of 1 or 2 in any factor should be carefully scrutinized. In most cases, ARTPs that score a 1 or 2 in any factor will not be considered as an alternative.

2.The RTS or ARTT should check YES or NO to make their final recommendation, and also may choose to discuss their recommendation in Item E (Comments).

DEFINITIONS

TOXICITY: Data for exposure concentrations and duration consistent with expected use patterns should be assembled since they may be more appropriate than standard test data (e.g., LC_{50}). These standard toxicity tests have been designed for testing readily soluble materials. Products which are sparingly soluble, chemical-treating agents will present methodological problems as to how to prepare a test solution. These problems may lead to highly variable test results depending on how individual laboratories interpret test procedures. Use of readily available toxicity data may be misleading, so all information should be used with caution.

APPLICATION: When determining the degree of difficulty in putting a response tool into action, one must consider sophistication of the application system, the level of operator training required, and the available stockpile of the response tool. Sophisticated response tools that have application systems with multiple mechanical and power components and that require a high degree of training are least desirable and therefore "extremely difficult" to use. Those response tools that are used in bulk or that are not available in sufficient quantities to aid in the response, are also least desirable.

PRE-TEST PROCEDURES: If insufficient information is submitted or data are not available, evaluators may require additional testing of the tool to augment the evaluation. This may also be a requirement of use under specific conditions at the time of a spill. The evaluators will need to determine whether this is a necessity and, if so, the degree of difficulty associated with this requirement.

HISTORICAL USE: This is a measure of the documented success of the response tool under actual spill situations, based on the availability of data. This data can be in the form of photo and video documentation, third-party letters of support, and independent scientific field tests. Those response tools having any negative data, i.e., information that indicates the response tool as being adverse to response operations, would get the lowest rating. Response tools having little or no data to support historical success would receive the next lowest rating.

RECOVERY POTENTIAL: This is a measure of the response tool's ability to remove the pollutant of concern. This entails a review of the tool's recovery efficiency (percentage of pollutant recovered in a mixture) and recovery rate (rate at which pollutant is recovered (usually expressed in volume/unit time)). The response tool should be evaluated on its enhancement of recovery efficiency and rate.

TIME OF ARRIVAL ON SCENE: Each response tool is assumed to have an optimal window of opportunity for use. It is preferable for a response tool to arrive on scene well in advance of its window of opportunity to allow for field-testing and troubleshooting if required.

REQUIRED OUTSIDE SUPPORT: The evaluators must determine what auxiliary support the response tool requires, such as special fuels, respirators, hoses, boats, and eductors. An ideal response tool is one that comes with all the support equipment needed to put the tool into service.

DISPOSAL: Federal, state, and local permits and requirements differ for various waste products. All conditions for removal, storage, and final disposition must be met.

OPERATIONAL PARAMETERS: The performance of the response tool under current spill conditions needs to be assessed. "Spill conditions" in this context refer to the parameters that make up the spill operating environment, for example, sea state, wind, wave, currents, and temperature. For evaluations conducted before a spill, N/A would be selected for this factor. However, the evaluation team will need to define the best operating spill conditions for the response tool and write their findings in the comments section of this worksheet.

TECHNICAL MONITORING: The evaluators will need to determine the necessity for environmental monitoring and/or sampling and, if required, the degree of difficulty to perform the prescribed tasks. These tasks may include measurements in the air, water, and/or sediment, for biological, chemical, and/or physical components.

ENVIRONMENTAL IMPACTS: As opposed to specific toxicity issues, some of the factors to be considered here are possible smothering effects, adherence to feathers and fur, fate and degradation time for unrecovered product, effects on surrounding habitats, and effects of setting up and operating equipment.

PowerPoint Explaining

ARTES

Explaining the Relationship Between

the NCP Product Schedule,

Selection Guide for Oil Spill Applied Technologies,

And ARTES

History and Background

- **Past spill experiences shapes our current decision-making about countermeasures e.g., *Torrey Canyon*, *Ixtoc I* blowout, *Exxon Valdez, etc.***

History, Cont.d

- Use of “non-traditional” response technologies (e.g., early dispersants) ⇒ perceived damages
- Their use resulted in changes in Federal regulations:
  - National Contingency Plan, and
  - the Oil Pollution Act of 1990

High Comfort Level

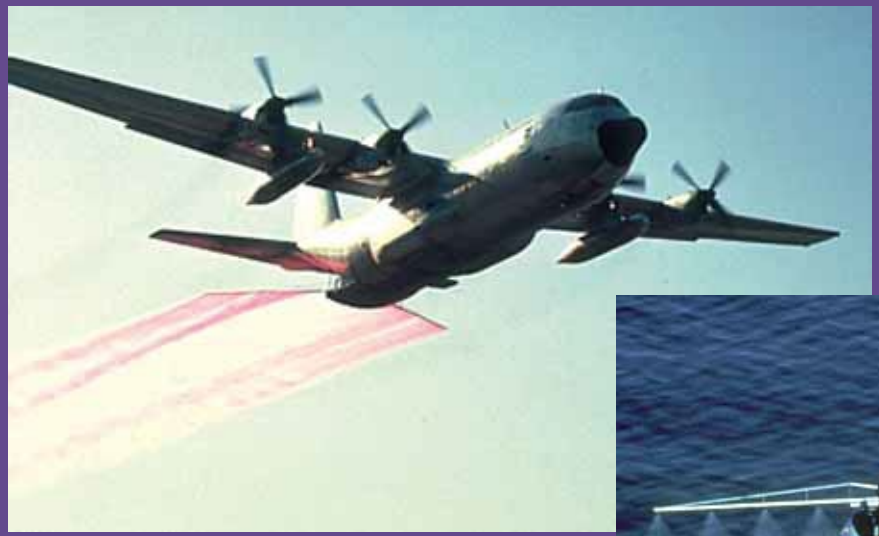
- Traditional countermeasures are a known entity

Applied Oil Spill Technologies, Defined

- a.k.a. – “non-traditional” countermeasures
- Countermeasures that are infrequently if ever used; little experience/knowledge about when these countermeasures could be useful and environmentally beneficial
- Includes:
  - Dispersants
  - Bioremediation Agents
  - Surface Washing Agents
  - Shoreline Pre-treatment Agents
  - Surface Collecting Agents
  - Solidifiers
  - Elasticity Modifiers
  - Emulsion Treating Agents
  - Other Miscellaneous Agents

Discomfort with Applied Technologies

- Decision-maker's wary of non-traditional response technologies



Why?

- Lack of experience with the various products/strategies
- Perceived problems with their use:
  - Liability?
  - Result in additional environmental damage?
  - Lack of experienced application/recovery personnel
  - Difficult to interpret product information
  - Vendors

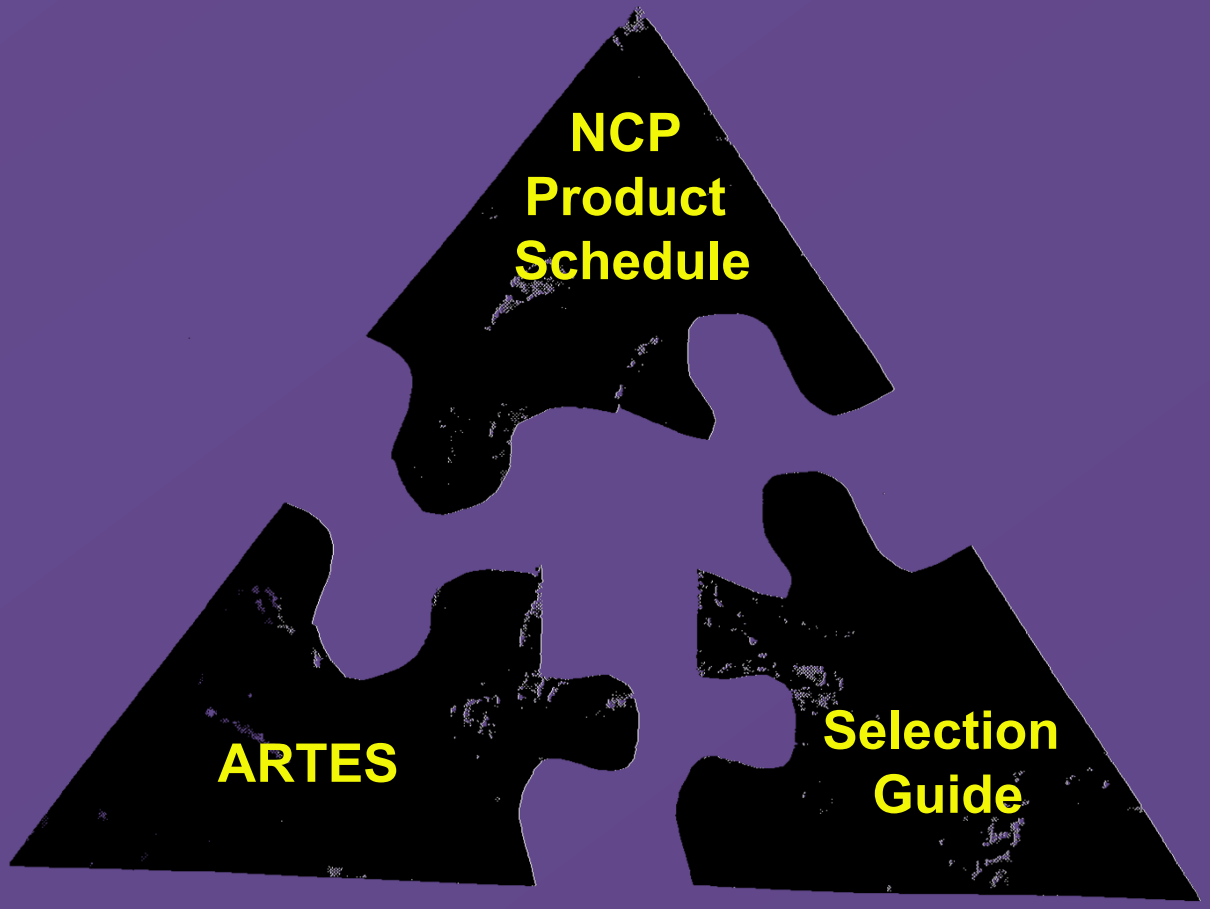
Applied Technologies Today

- Dispersants significantly changed from past formulations
- Standardized effectiveness and toxicity testing required
- Must be registered with EPA for use on oil spills in the US

3-Pronged Approach For Evaluating Applied Technologies

- Three “tools” available to response decision-makers:
  - The National Contingency Plan (NCP) Product Schedule (Subpart J 40CFR Part 300.900)
  - Applied Response Tool Evaluation System (ARTES)
  - Selection Guide for Oil Spill Applied Technologies

Putting the Pieces Together for Response Decision-making



3-Prong Review

- Each piece has a specific function, and strengths and limitations relative to the others
- Interaction of the three decision-making tools not well understood by decision-makers or vendors
- 3 “tools” contain information to provide the basis for making informed, appropriate decisions

NCP Product Schedule

- Functions as regulatory vehicle for use of any applied technologies
- Regulated under:
  - Section 311(d)(2) of the Clean Water Act, and
  - Section 4201 (a) of the Oil Pollution Act of 1990

NCP Product Schedule, Cont'd

- Listing is under the direction of the USEPA Oil Program Center
- Vendors submit required information and perform specified effectiveness and toxicity tests
- Information is posted and updated

Listing of a product does NOT mean that the product is recommended or endorsed by the USEPA for use on an oil spill;

Only that product has met minimum information requirements for listing.

Product Categories on NCP PS

- Dispersants
- Surface Washing Agents
- Surface Collecting Agents
- Bioremediation Agents
- Miscellaneous Oil Spill Control Agents

NCP PS, Cont'd

- Products that consist of materials that meet the definition of two or more of the product categories are evaluated and products are only listed under one category

NCP PS
Information Requirements

➢Special Handling	➢Toxicity
➢Worker Precautions	➢Shelf Life
➢Effectiveness	➢Recommended Application Procedure
➢Emergency Procedures From Skin or Eye Contact	➢Physical Properties (Flash Point, Pour Point, Viscosity, Specific Gravity, pH)
➢Protective Clothing Requirements	➢Analyses for Heavy Metals, Chlorinated Hydrocarbons and Cyanide
➢Minimum and Maximum Storage Temperatures	➢ Temperatures of Phase Separations and Chemical Changes

Strengths of NCP PS

- Federal requirement – Vehicle for product use during response operations in the US
- Minimum information standards must be submitted, including effectiveness and toxicity information
- Updated regularly (every 2 months or as necessary)

Limitations of NCP PS

- Not designed for incident-specific decision-making
- Does not allow easy comparison of products
- No way to capture lessons learned for individual product use
- Limited to chemical and biological additive products, that is…not new or advanced mechanical strategies or techniques

Limitations of NCP PS, Cont'd

- Does not provide all information needed by decision-makers
- Does not provide a basis by which new products (those not yet listed) can be considered prior to listing
- Does not provide assistance in choice of products/strategies or guidance in their application

Selection Guide
for Oil Spill Applied Technologies

Why Selection Guide Developed

- Designed to provide OSCs and other response decision-makers with an easy-to-use technical guidance database for considering applied oil spill technologies for use during an incident.
- Developed by Region III in cooperation with Region IV

Selection Guide, Cont'd

- Two volumes:
  - Decision-making information (Nationally applicable) and
  - Implementation/operational support documentation (regionally customizable)
- Provides information requested by decision-makers to consider, select, and implement an environmentally-appropriate product or technology

Selection Guide Information

- **Technology Categories**
  - Bioremediation Agents
  - Dispersants
  - Elasticity Modifiers
  - Emulsion Treating Agents
  - Fire-Fighting Foam
  - *In situ* Burning on Land
  - *In situ* Burning on Water
  - Shoreline Pre-treatment Agents

- **Technology Categories**
  - Solidifers
  - Sorbents
  - Surface Collecting Agents
  - Surface Washing Agents
  - Fast-water Booming Strategies
  - Non-floating Oil Strategies
  - Oil-in-ice Strategies
  - Pyrolytic Oil Strategies
  - Water Intake Monitoring Strategies

Information, Cont'd

- **Information Categories**
  - Mechanism of action
  - Authority required
  - Availability
  - General application requirements
  - Health and safety concerns
  - When to use
  - Limiting factors/environmental constraints
  - Monitoring requirements
  - Waste generation and disposal issues
  - Who to call for more information and additional resources

Content

- Instructions and matrices for selecting a strategy or countermeasure using job aid techniques (Human Performance Technologies techniques)
- Allows direct product comparisons among products and categories/strategies using product comparison tables
- Establishes the need for monitoring and capturing lessons learned

Content, Cont'd

- Glossary used with various products/ strategies
- History and status of product use (case study examples)
- Toxicity primer – how toxicity is measured and what the numbers really mean

Strengths of Selection Guide

- Allows comparison of similar products as well as comparison of various strategies to determine the best response
- Developed using “job aid” techniques
- Allows documentation for the decision-making process

Strengths, Cont'd

- Provides situation–specific assistance in the selection of products and strategies during planning and response, including new products/strategies
- Provides guidance on the use of response technologies and products
- Developed to capture and incorporate lessons learned (not fully initiated)

Limitations of Selection Guide

- Only as good as the information submitted; data could be limited.
- Should be updated as new information becomes available (e.g., ARTES evaluations, actual use)
- January 2003 Edition available in:
  - paper format,
  - internet download from www.response.restoration.noaa.gov/oilaids.html, and
  - interactive CD version

Limitations, Cont'd

- Decision-makers need to ensure that they are making their decisions with the most current information available
- Not a cook book – still have to evaluate incident-specific information with product in mind

The Applied Response Tool Evaluation System (ARTES)

- A tool for evaluating value of individual products for oil spill response discharges
- Developed to evaluate effectiveness of applied technology response options and evaluate proposed conventional countermeasures
- Evaluators review information provided by vendors and NCP PS to determine/identify the best use or value of the product/technology.

Why ARTES Was Developed

- To provide on-scene coordinators (OSCs) with method for evaluating applied response technologies for use at an oil or chemical spill
- To provide evaluation program to assist OSC and RRT in deciding whether to implement an applied technology
- To get a better understanding of how an applied response technology would/should work
- To evaluate proposed conventional countermeasures

ARTES Information Requirements

- Chemical/physical properties
  - Composition, density, specific gravity, viscosity, solubility, etc.
- Human health and safety concerns
- Biological toxicity data, where available
  - Aquatic, mammal, bird, reptile, vegetation toxicity
- Application information
- Historical success
- Recovery/disposal information
- Technical monitoring

Undergoing an ARTES

- Evaluators independently review vendor information
- As a group, Evaluators review vendor information
- Evaluators gather group consensus and product restrictions/ limitations as identified by the group
- Evaluators develop recommendations for the product ‘s use

Undergoing an ARTES, Cont'd

- Completion of an ARTES evaluation does not mean that a product / technology is pre-approved, recommended, licensed, certified, or authorized for use on an incident

Strengths of ARTES

- May be used both before and during an incident
- Evaluates a response tool on its technical merits and not economic factors
- Solely designed to evaluate a product's appropriateness for use during a specific incident under specific circumstances, or as a pre-evaluation to identify likely conditions which favorable outcomes are anticipated by using a product

ARTES Strengths, Cont'd

- Rapidly evaluate and provide feedback to the OSC in the form of a recommendation. This enables the OSC to make a well-informed decision on the use of an individual product
- Subjecting all proposals to consistent degree of evaluation ensures that vendors are considered on a "level playing field."

Current Limitations of ARTES

- Only evaluates a single product; does not facilitate easy comparison among products
- Regionally- and incident-specific. Currently an evaluation is only applicable for the habitat/ climate specific conditions being considered by the Evaluators. *Evaluations are not universally applicable on the National level*.
- Products would have to be put through the evaluation process independently in each region/area to address regionally-specific issues. $$ Limited.

Limitations, Cont'd

- Currently, no plan for capturing lessons learned or effectively sharing information from previous ARTES evaluations among regions.

Proposed ARTES Updates

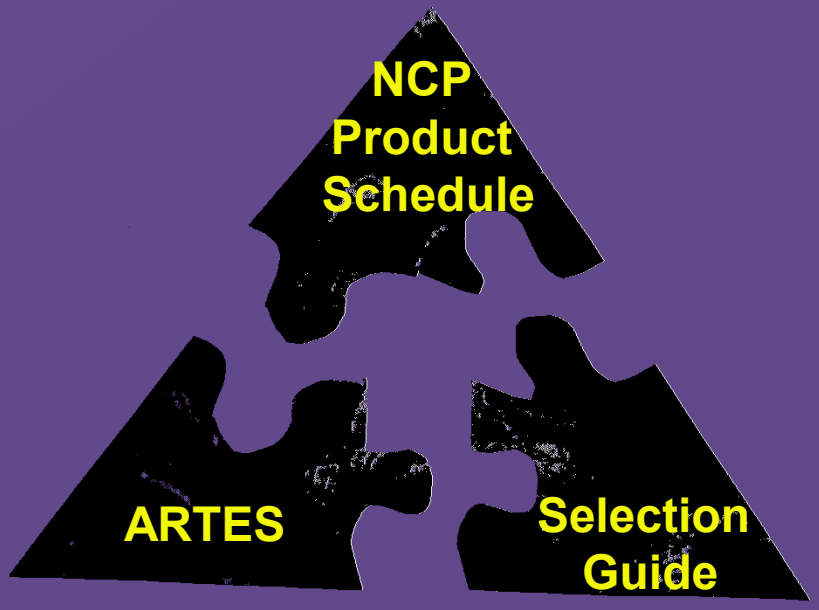
- Regions II, III and IV submitted request to NRT to take role in "nationalizing" ARTES
- Asks NRT to take the lead in the following:
  - ID panel of technical experts for each product category
  - Have technical experts review products at the National level (not restricted by habitat/climate considerations)
  - Make National ARTES evaluations available for adoption and further customization by Regions

Updates, Cont'd

- Make vendor information submittal easier; compile a complete list of information requirements to address all possible information needs of NCP, ARTES, and Selection Guide
- Have USEPA Oil Program Center warehouse this information for all evaluation methods

In Summary

- Use all the pieces to solve the puzzle (make a decision)



In Summary, Cont'd

- Most effective use of these tools is in a coordinated manner
- NCP is the first step and requirement; provides guiding legislation; Nationally applicable information
- ARTES assists in the evaluation of single product / technology for regional or incident-specific conditions

In Summary, Cont'd

- Selection Guide allows:
  - Screening the incident for possible strategies/ products that could add value to a response, and
  - Comparison of products/strategies of interest relative to other techniques to select the most appropriate technology

Thanks for your attention!

LETTER OF PROMULGATION

The Region III Regional Oil and Hazardous Substances Pollution Contingency Plan (R3RCP) was developed in accordance with the provisions of the Comprehensive Environmental Response, Compensation, and Liability Act of 1980, the Clean Water Act of 1977, and the National Oil and Hazardous Substances Pollution Contingency Plan (NCP) (40 Code of Federal Regulations [CFR] 300), which require the Regional Response Teams (RRTs) in each federal region to develop a Regional Contingency Plan (RCP) to coordinate effective response to oil spills and hazardous substance releases into the environment of the United States within the Mid-Atlantic Area, including the District of Columbia, Delaware, Maryland, Pennsylvania, Virginia and West Virginia.

The R3RCP was developed in cooperation with the designated representatives from organizations that make up the Region III Regional Response Team (RRT3): thirteen federal departments and supporting agencies, one federally recognized tribe, three states, two commonwealths, and the District of Columbia.

The RCP is organized according to key functions of the RRT. To promote ease of use, the revised RCP had been published electronically and is available for viewing or download from the RRT3 website:

www.nrt.org/RRT3_RCP

The seven main sections of the RCP are as follows:

- Section 1: Introduction
- Section 2: Consistency with the NCP
- Section 3: Regional Response Policies
- Section 4: RRT Operations and Administration
- Section 5: RRT Agency Roles, Capabilities, and Support
- Section 6: Related Plans and Programs
- Section 7: Abbreviations and Acronyms

Updates to this plan will be considered at RRT semi-annual meetings and changes will be distributed in electronic form. Full review with letters of promulgation will take place every four years. Future changes to the plan will be consecutively numbered and designated as such. Any changes or comments to the R3RCP should be submitted to:

Cindy E. Santiago
USEPA RRT Coordinator
U.S. EPA Region III
1650 Arch Street
Philadelphia, PA 9103-2029
santiago.cindy@epa.gov

David Pugh
USCG RRT Coordinator
Fifth Coast Guard District
1 Washington Avenue
Philadelphia, PA 19148
david.e.pugh1@uscg.mil

This plan is in effect upon signature, and supersedes and replaces previous RCPs:

Kevin Boyd
Emergency Planning and Response Branch Chief
Co-chair
U.S. EPA Region III
Region III Regional Response Team

David T. Ormes
Incident Management Preparedness Advisor Co-Chair
Fifth Coast Guard District
Region III Regional Response Team

RECORD OF CHANGES FOR REGION III REGIONAL CONTINGENCY PLAN 15

SECTION 1: Introduction

Region III Regional Response Team (RRT3) is a part of the National Response System (NRS) and our members include representatives from the states of Delaware (DE), Maryland (MD), West Virginia (WV), the Commonwealths of Pennsylvania (PA) and Virginia (VA), the District of Columbia (DC), and 13 federal departments and supporting agencies. The RRT3 Co-Chairs are: the United States (U.S.) Environmental Protection Agency (USEPA) from the Region III office in Philadelphia, PA and the U.S. Coast Guard (USCG) Atlantic Area/Fifth USCG District office in Portsmouth, VA.

RRTs function in two ways – as a standing team and as an incident-specific team. The standing RRT3 is a planning, policy, and preparedness coordinating body that does not respond directly to the scene of a spill or release. They provide a regional mechanism for the development and coordination of preparedness activities before a response action is taken. The incident-specific RRT is available for coordination of assistance and advice to the Federal On-Scene Coordinator (FOSC) during incident response. It provides assistance as requested by the FOSC during an incident. For a thorough description of both the NRS and the responsibilities of Regional Response Teams (RRTs), please visit the National Response Team (NRT) website.

There are 13 RRTs in the U.S., each representing a particular geographic region (including the Caribbean and the Pacific Basin) (**Figure 1.1**). RRTs are composed of representatives from field offices of the federal agencies that make up the NRT, as well as state representatives.

Like the NRT, the standing RRTs are bodies that coordinate, plan, and update policy, and do not respond directly to the scene. The RRT provides assistance as requested by the FOSC during an incident.

To access an RRT Home Page, please see https://www.nrt.org/site/regionmap.aspx.

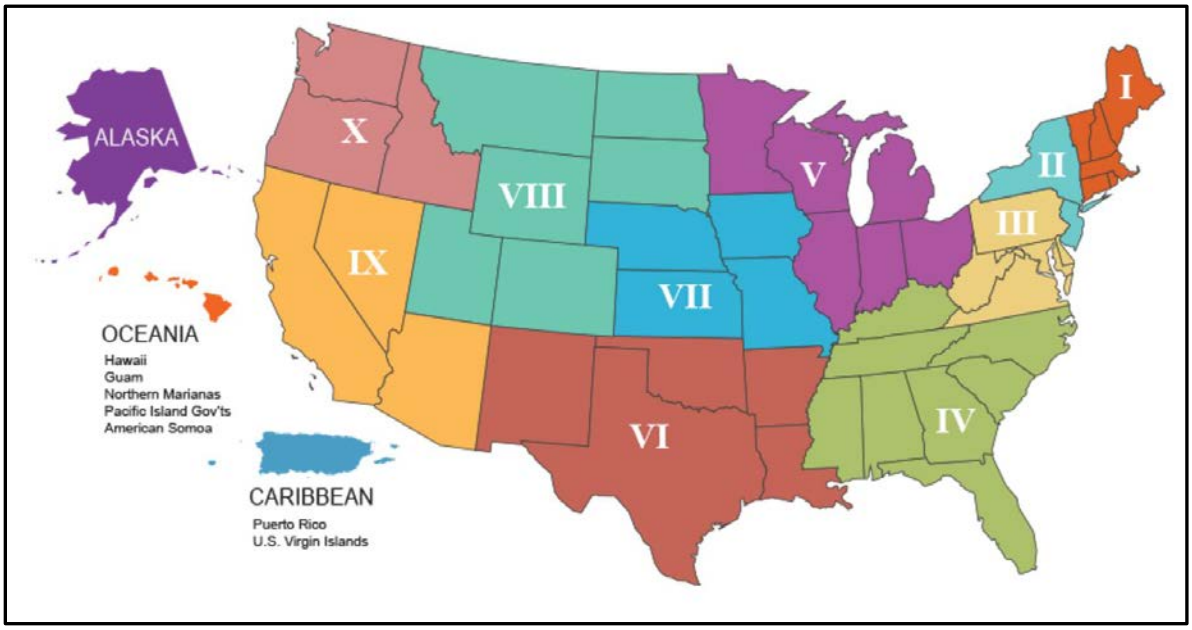

Figure 1.1. Regional Response Team Areas.

A. Purpose and Objectives

Large or dangerous spills that impact significant areas or important resources or that last a long time may require RRT support to the FOSC. Some examples of RRT support to the FOSC include:

- Broker of information to the larger political, media, and technical communities that we call stakeholders;
- Filter of information or demands from the political and industrial communities; and
- Strategic planning. The skills required for RRT members for these types of planning or emergency roles are strategic thinking, flexibility, and organizational problem solving.

The purpose of the Region III Regional Oil and Hazardous Substances Pollution Contingency Plan (R3RCP) is to provide organizational structure and procedures for preparation for and responding to discharges of oil and releases of hazardous substances, pollutants, and contaminants; natural or man-made disasters; or acts of terrorism. The R3RCP fulfills this purpose by providing a framework in which Area Contingency Plans (ACPs) in Region III fit with each other, the National Oil and Hazardous Substances Pollution Contingency Plan (NCP), and with other federal emergency response plans. The R3RCP also describes the mechanisms by which the RRT3 assists FOSCs before a response by providing planning and training activities, and during a response through organizational and coordination assistance. Last, the R3RCP serves as a compilation of RRT3 policies and guidance pertaining to all-hazards responses.

Members of the RRT3 are listed in the following categories:

- Standing RRT Primary and Alternate Members
- Incident Specific RRT Membership by State
- Area Committee Members
- State Trustees for Natural Resources
- Designated On-scene Coordinators
- State Offices Designated to access the Oil Spill Liability Trust Fund (OSLTF)

A directory of RRT3 members, which provides primary points of contact (POCs) for each member agency and contact information, is provided in **Appendix 1**. The *RRT3 Primary Contact List* will be updated after each semi-annual RRT3 meeting.

The references for support that can be provided by RRT Members to the FOSC is listed in the National Contingency Plan, Part 300.175 Federal agencies: and Part 300.185 State and Local.

B. Scope

The R3RCP applies to response operations taken by all federal, tribal, state, and local agencies within the Standard Federal Region III area that are covered under the provisions of the NCP. Region III includes the following geographical areas:

- State of Delaware
- District of Columbia
- State of Maryland
- Commonwealth of Pennsylvania
- Commonwealth of Virginia
- State of West Virginia
- All lands of federally recognized tribes located within the geographical boundaries of Region III.

In subject areas where RRT policy and structure mirror that which is laid out in the NCP, the RCP defines and communicates the roles of RRT3 members in support of the FOSC in planning or in response to oil and chemical spills in the region. Oil and chemical spill planning also includes spills or releases resulting from natural emergencies such as floods, hurricanes, or man-made emergencies such as terrorism events. The R3RCP contains regional plans that outline the complex interactions and funding mechanisms required during implementation of disaster plans. The ACPs or the plans of the Local Emergency Planning Committee (LEPC) will not duplicate the R3RCP. The RCP documents the guidance policy, methods, and

criteria that the RRT3 uses to evaluate the oil response planning of the ACP and the chemical response planning of the LEPC. The RCP will not duplicate the National Response Framework or details in the Emergency Support Functions. Instead, the R3RCP documents the supporting roles and activities of the RRT3 during an oil or chemical spill or during a natural disaster that would require federal funding and federal authorities under the Stafford Act.

C. Relationship with Other Plans

As many as five levels of emergency-related plans may be found within the federal, state, and local levels of government. A seventh tier of plans appears when those developed by business and industry are considered. Within the planning levels of governments, there are three levels of federal plans; national contingency and response plans, federal RCPs and federal ACPs. At the state and local level are state plans, regional plans, local plans and departmental and support-agency plans. Each of these plans reflects levels of action and responsibility. Some of these plans are multi-hazard comprehensive plans while others are single-hazard response and coordination plans. Given the fact that responses to incidents involving oil and hazardous substances will most certainly be multi-organizational and multi-jurisdictional, a basic understanding of each planning level and how the various plans fit together is needed to facilitate integration and coordination of the several plans that may be activated in a response. Section 1G – Administrative Procedures describes the three levels of contingency plans under the National Response System and cross-references emergency preparedness plans at the state and local level.

Planning and preparedness for disasters occurs at all levels of government and business and industry. The coordination of actions taken under these plans is critical, particularly in a chemical emergency. **Figure 1.2** identifies the governmental plans that may be operative during an oil or hazardous substances event so that those implementing this plan may be aware of other probable plan activations and how best to integrate and coordinate the overall response activities. Business and industry planning directs how an individual facility will respond and integrate with the regulatory requirements of the governmental planning documents shown in **Figure 1.2**.

Figure 1.2. Governmental Plans Supporting the NCP. Note: Business and Industry Planning are not included in the figure because they are not governmental plans, but also support and are inserted into emergency response activities.

D. Planning Process

Preparedness planning is not an exact science, but it does have elemental processes that can be used to shape the desired direction of a response by focusing your development of pre-planned actions that assist in establishing clear goals and achievable objectives. Preparedness processes involve deciding in advance what must be done, how to do it, when to do it, and by whom it should be done. It should be done carefully and systematically. Thus, a truly successful response organization is one that enhances its ability to accomplish predetermined Critical Success Factors discussed in Section 1F – Measurement Process.

Conducting an accurate and systematic risk assessment of the area is critically important in understanding what risks are present. Risk assessment provides for easier and more accurate scenario development, because knowing the risks allows you to know what to plan for and what level of preparedness is required.

The development and use of a Response Management System and Response Management Organization as a tool in Command and Control of the response is critical to the effective and efficient use of resources. A Response Management System must enhance the achievement of the Critical Success Factors. The use of the Incident Command System and Unified Command System (ICS/UCS) has been mandated for response to oil and hazardous material responses. The Response Management Organization must be properly organized, trained, exercised, and facilitated to ensure unity of effort, centralized control, and functional decentralization.

Resource development involves the assemblage of all necessary and appropriate resources within the bounds of logistical and financial considerations. Resources that are necessary to accomplish the objectives assigned to the Critical Success Factors include people, equipment, and finances.

Resource Mobilization capability is the capacity and capability to coordinate, assemble, and put into motion or action the organization of all necessary resources assigned to it. Efficient and effective mobilization of response resources is a critical element in reducing the cost and environmental impact of an incident.

E. Exercise Process

Government led exercises, simulations, and training preparedness for response exercise program (PREP) exercises are supported by the USEPA and USCG Area Commands. These exercises are designed specifically to test the readiness and abilities of the FOSC/RRT response organization and Area Contingency Planning process. These exercises will be given the highest priority of RRT participation. The mode of participation, (telephone activation, on-site activation, etc.) will be at the discretion of the RRT members. Realism and use of existing procedures and policies will be maintained to the maximum extent possible. Industry led PREP exercises are supported to the greatest extent possible as well, but often do not have RRT involvement other than certain RRT members who are requested to participate as exercise design team members, controllers, evaluators, or players.

External Exercises

External exercises are defined as those conducted by member agencies of the Region III RRT including the state members, local governments (i.e., LEPCs), and industries within the region. Exercises conducted by other RRTs or in other regions will also be considered external. The RRT encourages member agency participation, in external exercises, to the greatest extent possible as a means of providing training or testing readiness capabilities. To allow for broad RRT participation, any RRT member agency solicited for participation in or assistance in conducting an exercise should inform the RRT Coordinators or the Chair of the Training Workgroup of the event. The Co-Chairs and Executive Committee will determine the level of RRT participation; however, Member agencies may participate at their own discretion. The Training Workgroup is available to provide technical assistance and training to other organizations and agencies who are interested in developing an exercise program or in planning and staging an exercise. The Workgroup updates the schedule of exercises and training events during the semi-annual RRT meetings.

Preparedness and Response Training

The Training Workgroup has access to resources, both within the RRT membership as well as through outside organizations, that have expertise in a wide variety of areas applicable to oil and hazardous substance emergency preparedness and response. This expertise includes emergency and disaster planning for both government and industry, exercise design and planning, first responder training, organization and implementation of an Incident Command System and managing multi-organizational emergency response through the National Response System. This assistance is available to the RRT as well as individual member

and non-member agencies and organizations. The RRT Coordinators and Chair of the Training Workgroup can provide assistance and points of contact in these areas.

RRT Exercise Reports

A summary of RRT exercise and other training activities will be included as a part of the annual report to the NRT and posted to the RRT3 Home Page (www.nrt.org/RRT3). The procedures/expectations for the submittal of these reports are explained within the "Reports" section of this document.

F. Measurement Process

The Best Response Model as a Tool for Response and Planning

Planning for a spill emergency requires the creation of a response organization with strengths that include the ability to quickly and efficiently accomplish a large number of tasks. Although tasks can be categorized in different ways, the Best Response model categorizes tasks into five Key Business Drivers. The Best Response Model then identifies a number of Critical Success Factor that must be accomplished for each of the Key Business Drivers to accomplish the spill response goal, which is to minimize the consequences.

Key Business Drivers	Critical Success Factors
Human Health and Safety	No spill related public injuries, illness, or death No response worker injuries, illness, or death
The Natural Environment	Source Discharge Minimized Spill Effectively Contained/Controlled Sensitive Areas Protected Resource Damage Minimized
The Economy	Economic Impact Minimized
Public Communication	Accurate Timely Information Dissemination Positive Media Coverage of Response Positive Public Perception
Stakeholder Support and Services	Minimize Impact to Stakeholders Stakeholders Well Informed Positive Meetings with Stakeholders Prompt Handling of Damage Claims

The Preparedness Planning Focus

All ACPs contain predetermined objectives that are designed to achieve each of the Critical Success Factors. For each objective of each Critical Success Factor, the planning process identifies the organization, response resources, resource mobilization issues, and the objectives needed to achieve success.

Preparedness Tasks

RRT3 and associated contingency plans will conduct preparedness tasks in line with the National Preparedness Goal. FOSC's are expected to brief out recent exercises associated with oil and hazmat and discuss lessons learned. The first step in preparedness is to score the planning documents on their ability to provide support to the FOSC. This can be measured through the effective use of planning documents during

exercises. The second step in preparedness is to ensure the planning documents are consistent with the NCP. The planning crosswalk in Section 2 provides a measurement of the R3RCP's consistency with the NCP. The third step in preparedness is to meet with your response partners. This can also be done by conducting and attending exercises. Another way to interact with response partners is by attending RRT, LEPC, area committee, and other meetings.

G. Administrative Procedures

This part of the R3RCP details procedural information that is needed both internally and externally to support the RRT3.

Responsibility Organization for Response (Subpart B of the NCP)

The Administrative Procedures part of the RCP, including activation, membership, workgroups, meetings, and reports and documentation guidelines, are discussed in detail in Section 4.

The RCP Re-Write Workgroup is responsible for reviewing and revising the Administrative Procedures outlined in this RCP. A regular update cycle will be considered to provide for changes that are not time-critical, but interim amendments may also be required to reflect significant changes within the defined area. Version control will be established and an interim update process is critical. Certain portions of the plan, such as contact lists, may change frequently and should be maintained separately from the plan itself. Significant revisions to the document are subject to approval by the Executive Committee.

Reference Sec. 300.115 - Regional Response Teams.

> *(a) Regional planning and coordination of preparedness and response actions is accomplished through the RRT. In the case of a discharge of oil, preparedness activities will be carried out in conjunction with Area Committees, as appropriate. The RRT agency membership parallels that of the NRT, as described in Sec. 300.110, but also includes state and local representation. The RRT provides:*
>
> - *The appropriate regional mechanism for development and coordination of preparedness activities before a response action is taken and for coordination of assistance and advice to the OSC/RPM during such response actions; and*
> - *Guidance to Area Committees, as appropriate, to ensure inter-area consistency and consistency of individual ACPs with the RCP and NCP.*
>
> *(b) The two principal components of the RRT mechanism are a standing team, which consists of designated representatives from each participating federal agency, state governments, and local governments (as agreed upon by the states); and incident-specific teams formed from the standing team when the RRT is activated for a response. On incident-specific teams, participation by the RRT member agencies will relate to the technical nature of the incident and its geographic location. (NCP, Sec 300.115)*

Reference Sec. 300.210 -- Federal contingency plans.

> *There are three levels of contingency plans under the national response system: The National Contingency Plan, RCPs, and ACPs. These plans are available for inspection at EPA regional offices or USCG district offices. Addresses and telephone numbers for these offices may be found in the United States Government Manual, issued annually, or in local telephone directories.*

(a) The National Contingency Plan. The purpose and objectives, authority, and scope of the NCP are described in Secs. 300.1 Through 300.3.

(b) Regional Contingency Plans. The RRTs, working with the states, shall develop federal RCPs for each standard federal region, Alaska, Oceania in the Pacific, and the Caribbean to coordinate timely, effective response by various federal agencies and other organizations to discharges of oil or releases of hazardous substances, pollutants, or contaminants. RCPs shall, as appropriate, include information on all useful facilities and resources in the region, from government, commercial, academic, and other sources. To the greatest extent possible, RCPs shall follow the format of the NCP and be coordinated with state emergency response plans, ACPs, which are described in Sec. 300.210(c), and Title III local emergency response plans, which are described in Sec. 300.215. Such coordination should be accomplished by working with the SERCs in the region covered by the RCP. RCPs shall contain lines of demarcation between the inland and coastal zones, as mutually agreed upon by USCG and EPA.

(c) Area Contingency Plans. (1) Under the direction of an OSC and subject to approval by the lead agency, each Area Committee, in consultation with the appropriate RRTs, USCG DRGs, the NSFCC, SSCs, LEPCs, and SERCs, shall develop an ACP for its designated area. This plan, when implemented in conjunction with other provisions of the NCP, shall be adequate to remove a worst case discharge under Sec. 300.324, and to mitigate or prevent a substantial threat of such a discharge, from a vessel, offshore facility, or onshore facility operating in or near the area. (NCP, Sec 300.210)

SECTION 2: Consistency with the NCP

The NCP requires that RCPs follow the format of the NCP to the greatest extent possible. Policies and operating procedures of the RRT are consistent with the NCP, as much as they are described therein. In an effort to create the most streamlined and user-friendly document possible, information from the NCP that applies to policies and procedures in Region III without modification was excluded from the RCP. Responders can reference the NCP for that information. The RCP includes only information where the scope and applicability are limited to Region III.

A cross reference matrix for the R3RCP relative to the NCP is provided in **Appendix 2**. The matrix table lists all sections of the NCP and states whether information pertaining to any specific section has been included in this R3RCP or in the ACPs for areas within Region III. Sections of the NCP, for which RRT policy and operating procedures are identical to that laid out in the NCP, are marked NRM, or 'No Regional Modifications'.

The cross reference matrix in **Appendix 2** documents cases where the RRT3 has supplemented or deviated from information in the NCP pertaining to aspects of response procedure or policy.

SECTION 3: Regional Response Policies

A. Objectives

This section serves as a source for regional response policies that have been instituted by members of the response community in Region III and are specific to response operations in Region III. Some of the policies are specific to geographic areas within Region III, and the boundaries between these areas are described in this section. Some of the documents that set these policies, including Memorandum of Understanding (MOU) or Memorandum of Agreement (MOA) and policy documents, are included as appendices of the R3RCP.

B. Regional Boundaries

From the perspective of a federal-led response to a discharge of oil or a release of hazardous substances, the most significant geographic boundary in Region III is the area between the inland and the coastal zones. The USEPA provides the FOSC for all responses within the inland zone. The USCG provides the FOSC for all responses within the coastal zone. These functions were delegated to USEPA and USCG in Executive Orders 12580 and 12777 [as amended]. Links to these documents are included in **Appendix 3**. The boundary between the two zones was established by USEPA and USCG using recognizable landmarks (usually roads) that can be identified in the field. The inland/coastal boundary can be changed with the concurrence of the Fifth USCG District and Sector Commander in which the change is to take place, and the Chief of the Emergency Planning and Response Branch of USEPA Region III. This boundary is defined as described in **Appendix 4**.

As per 40 CFR 300.120 (1), the USCG provides the FOSC for oil discharges within or threatening the coastal zone. The USCG shall also provide FOSCs for the removal of releases of hazardous substances, pollutants, or contaminants into or threatening the coastal zone. USEPA generally provides the FOSC for long-term removal or remedial actions in response to releases of hazardous substances (except in response to releases from vessels). This policy is documented in the *Instrument of Re-delegation Between the USCG and the USEPA* signed on 29 November 1987 and on 27 May 1988. A copy of this document is included in **Appendix 5**.

For planning and response purposes, the inland zone is considered to be one area (Region III) and is covered under one ACP, the Inland Area Contingency Plan. Furthermore, USEPA Region III has defined 14 sub-areas that are within the inland area (see **Figure 3.1**):

- II – Washington DC Extended,
- III – Southeast PA/DE,
- IV – Northeast PA,
- V – Southcentral PA,
- VI – Northcentral PA,
- VII – Southwest PA/Wheeling WV,
- VIII – Northwest PA,
- IX – Huntington/Central WV,
- X – Shenandoah Valley,
- XI – Upper Chesapeake,
- XII – Southeast VA,
- XIII – Southcentral VA,
- XIV – Northcentral WV, and
- XV – Southwest VA/WV.

The Region III coastal zone is overseen by three USCG Districts (see **Figure 3.1**) encompassing the following Sectors/Marine Safety Units (MSU):

- **Fifth USCG District** - The district office is located in Portsmouth, Virginia and is comprised of: Virginia; District of Columbia; Maryland; Delaware; and eastern Pennsylvania.
  - Sector Delaware Bay
  - Sector Maryland and National Capitol Region
  - Sector Hampton Roads
- **Eighth USCG District** - The district office is located in New Orleans, LA, and includes West Virginia and Western Pennsylvania.
  - MSU Pittsburgh
  - MSU Huntington
- **Ninth USCG District** - The district office is located in Cleveland, Ohio, and includes Northwestern Pennsylvania:
  - Sector Ohio Valley
  - Sector Buffalo

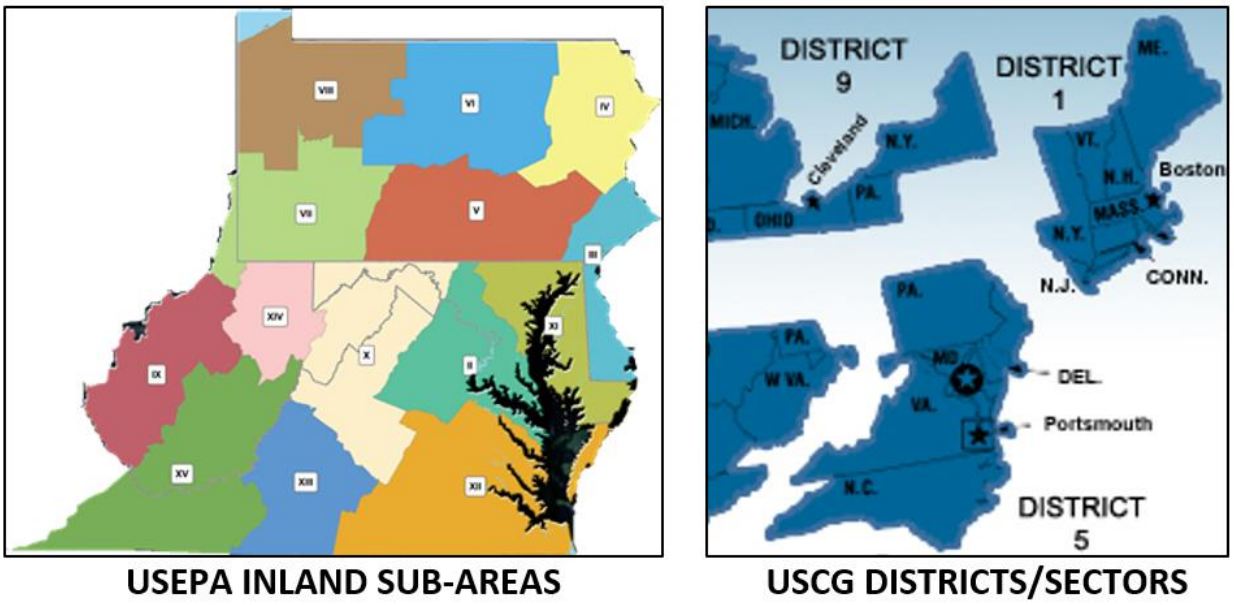

Figure 3.1 USEPA Inland Sub-Areas and USCG Districts in Region III.

For response purposes, pre-designated FOSCs are provided within each of these zones. An incident-specific USEPA FOSC is provided for a discharge or release from a group of FOSCs home-based at the USEPA Region III office in Philadelphia, PA. USCG FOSCs are the Sector Commander for each of the Sectors and MSUs in Region III (Sector Delaware Bay, Sector Maryland and National Capitol Region, Sector Hampton Roads, Sector Buffalo, MSU Pittsburgh, and MSU Huntington). The FOSC for multi-area responses is generally from within this group as described in the following Multi-Area Response section. Precise geographic boundaries are defined in 33 CFR Part 3.05 (see www.ecfr.gov).

C. Multi-Area Responses

Oil discharges and hazardous substance releases may cross regional or area boundaries, potentially adding complexity to the response. The compact nature of jurisdictions within Region III heightens the importance of detailing responses to boundary incidents. This section describes the approach to spills that cross

boundary areas within the region to ensure a consistent approach to both FOSC leadership and efficient RRT support to the FOSC, regardless of the location of an incident. It defines the system of activating the response mechanisms of multiple ACPs or RCPs in boundary incidents as called for by 40 CFR 300.140(a).

The following tenets apply to boundary situations:

- **One FOSC**: There shall be only one FOSC at any time during the course of a response operation to a single incident per 40 CFR 300.140(b), regardless of the various types of zones within the U.S. it may cross (Captain of the Port [COTP], inland/coastal, area, regional). Plans for joint response with Canadian equivalents of the U.S. OSC are detailed in international boundary contingency plans.
- **Incident Origin is the initial determinant of the FOSC**: The FOSC will generally be provided based on the location of the incident origin, although this may shift based upon the area most vulnerable to the greatest threat.
- **FOSC use of NIMS and UC**: National Incident Management System (NIMS) structures, most notably ICS/Unified Command (UC), will be used to coordinate an effective response. Other NIMS tools for complex incident management may be required in complex incidents.
- **Single Incident-Specific RRTs**: A single incident-specific RRT, or the international equivalent, most effectively supports the FOSC, even if this incident-specific team draws upon multiple regional representatives of an agency. Guidance for activation and operations of an Incident-Specific RRT for a cross-regional or multi-area response is included in Section 4.A.
- **Disagreements addressed by RRT then NRT**: The RRT Co-chairs will designate the FOSC if RRT agencies with jurisdiction, within affected areas, disagree on the FOSC designation in a boundary incident, or will refer the matter to the NRT if they cannot.

D. Specific Boundaries

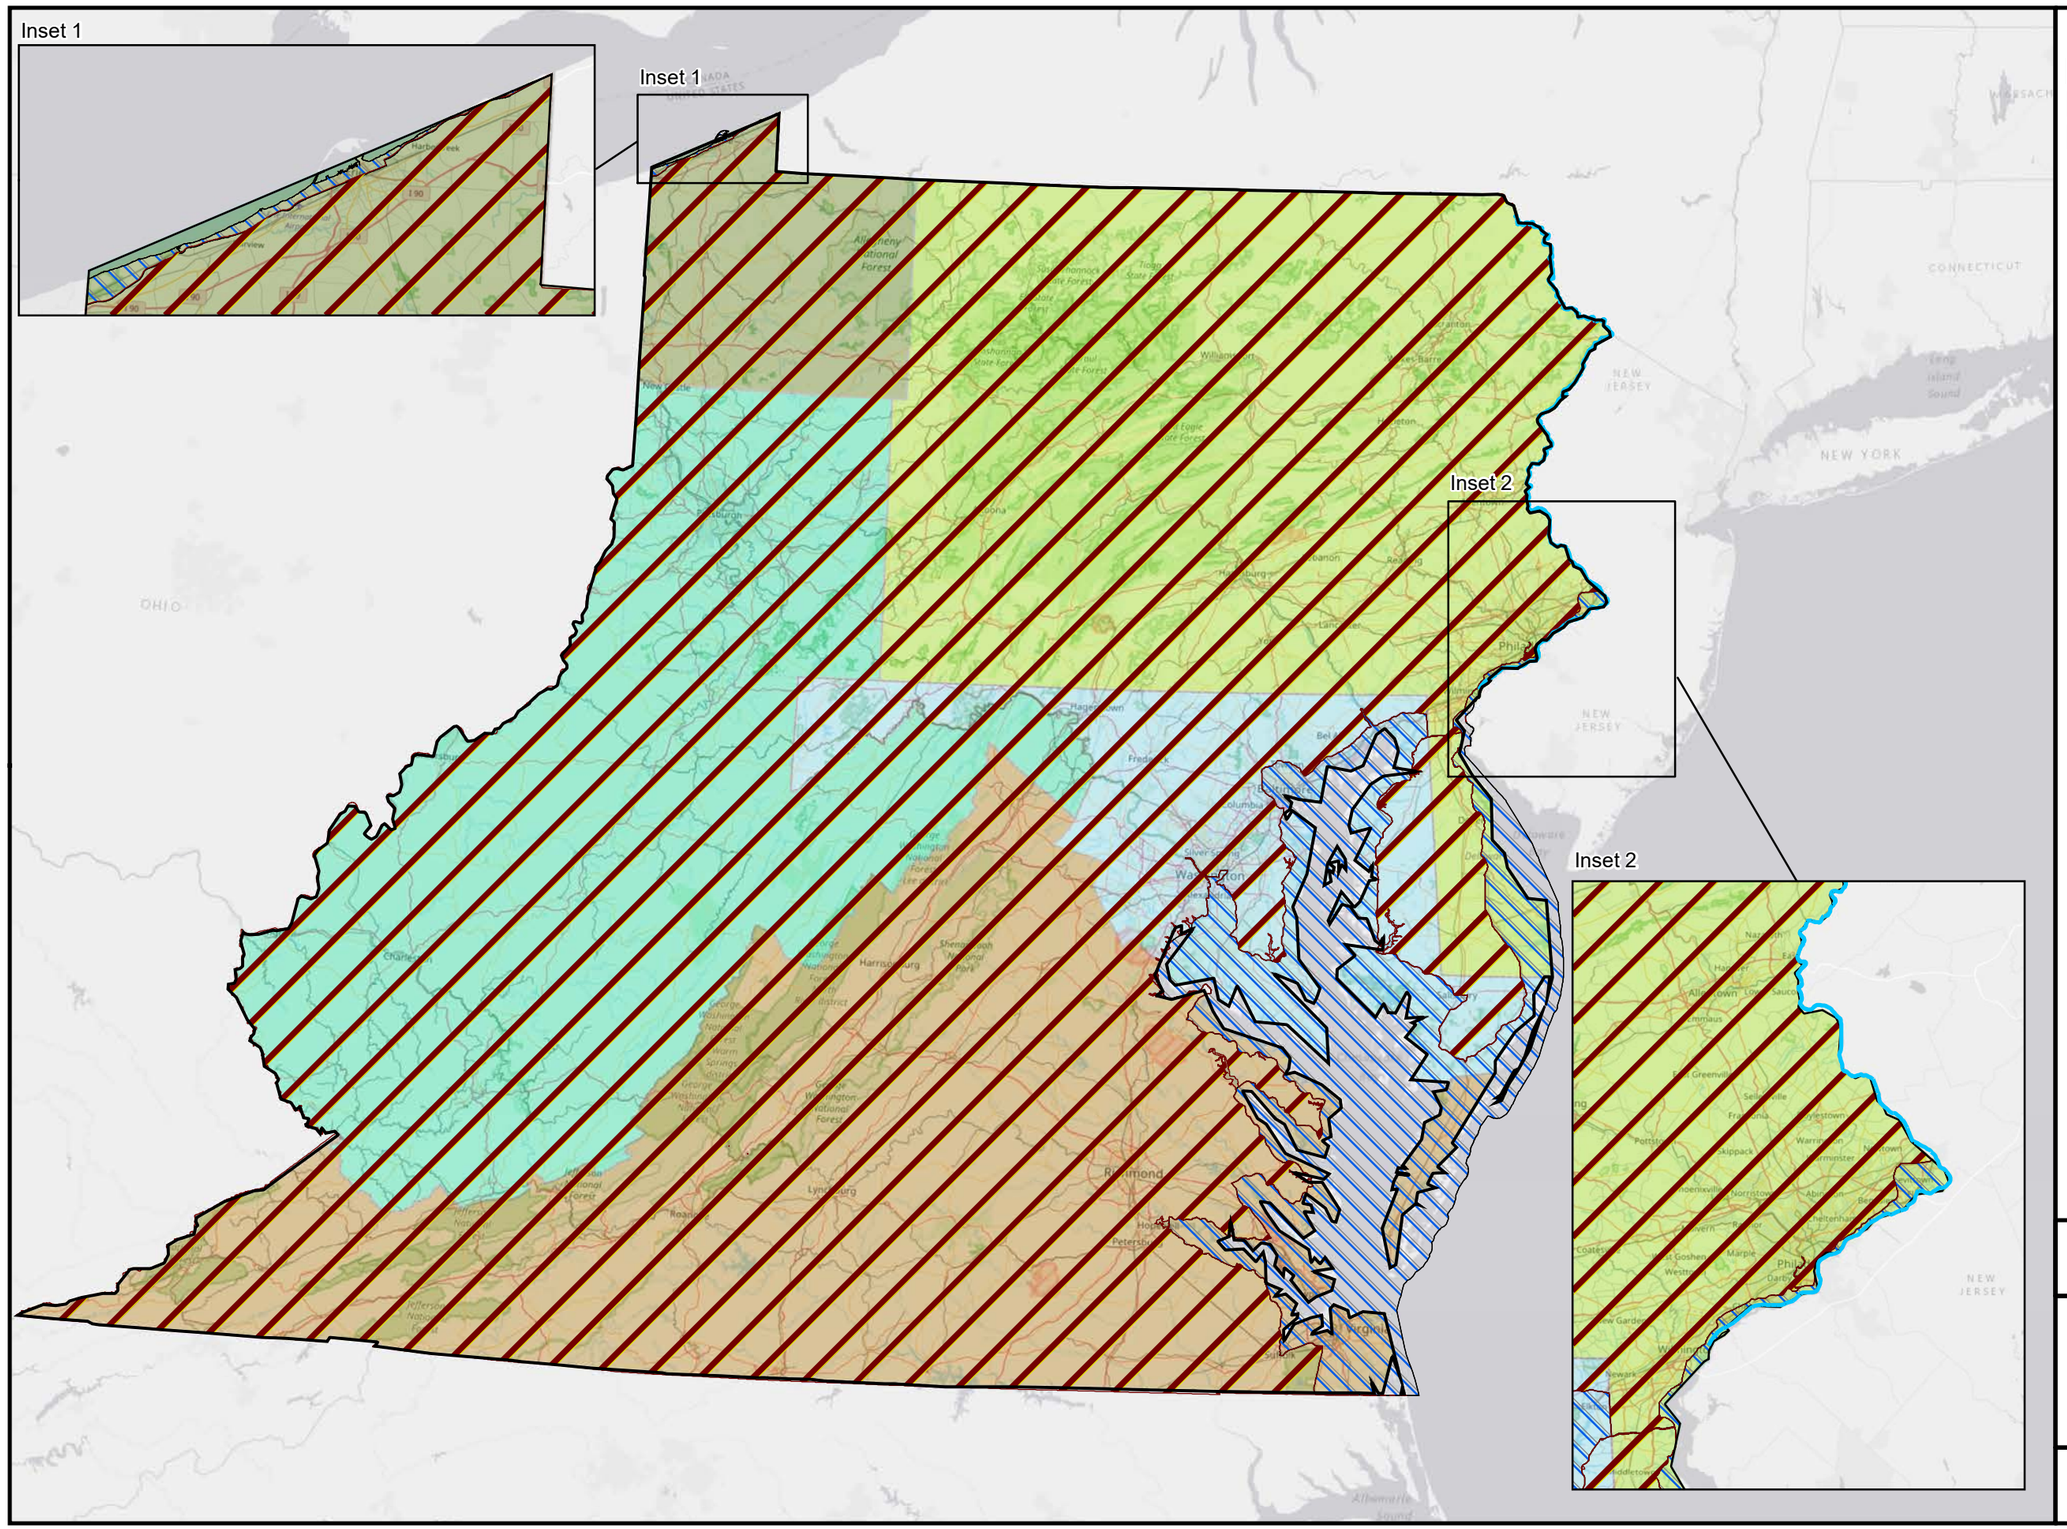
Intra-Regional Boundaries.

Boundaries within Region 3 that determine the pre-designated FOSC consist of the Inland/Coastal Boundary between USEPA and the USCG and the USCG Sector Boundaries within the coastal zone/inland waterways (see **Figure 3.2**). All intra-regional boundaries fall within the area of responsibility of the RRT and are supported by incident-specific activation of RRT3 as needed. **Figure 3.3** shows the ten USEPA regional boundaries; there are 13 RRTs, one for each of ten federal regions, plus one for Alaska, one for the Caribbean, and one for the Pacific Basin.

Inland-Coastal Zone Boundary.

USEPA and the USCG will carry out general agency and incident-specific responsibilities under the NCP, National Response Framework (NRF), R3RCP, and the applicable ACP. Both agencies will assist each other to the fullest extent possible to prevent or minimize the impacts of actual discharges or releases or threats of discharges of oil onto navigable waters or adjoining shorelines, and actual releases or threats of releases of hazardous substances into the environment.

Appendices 4-A and 4-B of this plan define the inland/coastal zone boundaries as required by 40 CFR 300.210(b) between Districts 5 and 8 and Region 3, specifying the inland zone where the USEPA provides FOSCs, and the coastal zone where the USCG provides FOSCs. USCG District 5, 8, and 9 boundaries are defined in 33 CFR 3.25, 3.40, and 3.45, respectively and shown on **Figure 3.2**. USEPA and USCG also chair the area planning committees within their respective jurisdictions. **Appendices 4-A and 4-B** further describe responses to incidents crossing the inland/coastal zone boundary, with the lead generally assigned depending on the zone containing the source.



Legend

- Region III Boundary
- USEPA Inland Zone

For certain incidents, a complete transfer of FOSC responsibility may be more practical than providing expertise and resources to the primary agency through mutual support. Significant discharges or releases may require shifting FOSC and/or establishing a Unified Area Command (UAC) to support FOSCs, prioritize critical resources, and provide strategic objectives. Execution of tactical operations and coordination remains the responsibility of the FOSC/UC.

If an incident crosses agency boundaries, the original FOSC will generally retain FOSC status for the duration of the spill, unless the adjacent area is vulnerable to the greatest threat. A formal agency transfer may be appropriate based on the incident impact, the agency with greater expertise for the incident specifics, or because of workloads or other situational factors. If the greatest vulnerability is in question, the multiple impacted FOSCs will consult with the RRT3 Co-chairs, who will seek consensus or make the determination on the single FOSC.A mechanism is provided in **Appendix 4** for this transfer.

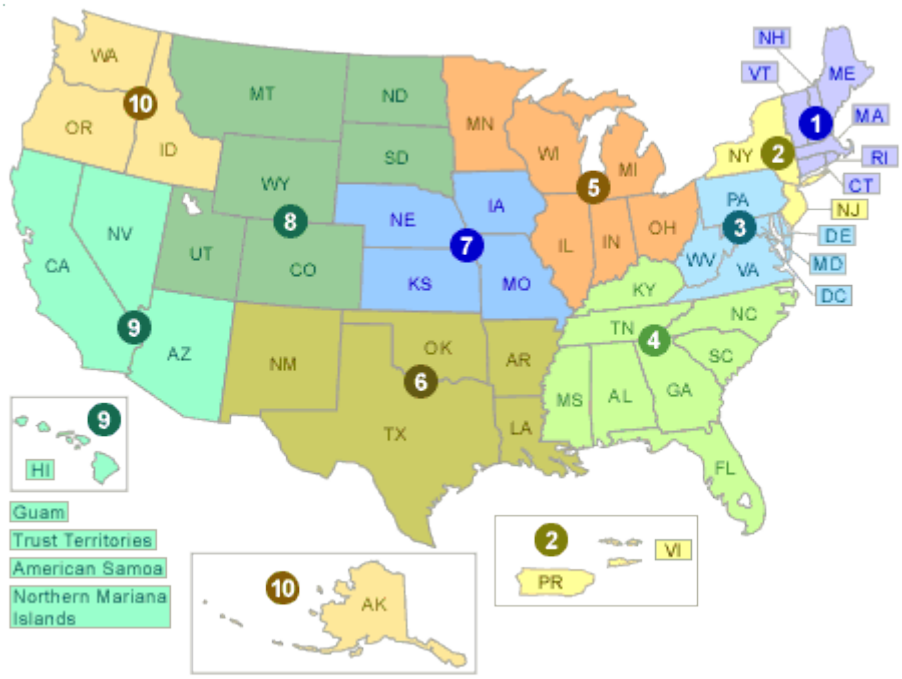

Figure 3.3 USEPA Regional Boundaries for Inland Areas

Regional Boundary

The principal characteristics of the Regional boundary that influence oil and hazardous substance response are inland/coastal and domestic/international. Both characteristics influence the pre-designated FOSC and also the mechanism of RRT support. **Appendix 3** provides the MOAs for Cross Boundary Support between Regions II, III, IV and V.

Coastal Region III and II Boundary

This coastal boundary area is with the USCG Fifth District's area of responsibility; the coastal boundary essentially divides New Jersey (Region II) from Pennsylvania and Delaware (Region III) following the state boundary line with the Delaware Bay. USCG Sector Delaware Bay's zone crosses this boundary area, ensuring a consistent FOSC and ACP for spills in the waters of the Delaware Bay. The USCG Fifth District is Co-chair of RRT3, and will chair incident-specific activations of the RRT3 for Delaware and Pennsylvania (and a small portion of southwestern New Jersey), drawing appropriate representation for spills in the RRT area of responsibility.

Coastal Region III and IV Boundary

This coastal boundary area divides Virginia and North Carolina along the state boundary line. USCG Sector Hampton Road's zone crosses this boundary area, ensuring a consistent FOSC and ACP. The USCG Fifth District is the Co-chair of RRT3 and will chair incident-specific activations of the RRT along this boundary, drawing appropriate representation from both RRTs.

Coastal Region III and V Boundary

This coastal boundary area divides northwestern Pennsylvania and northeastern Ohio along the state boundary line at Lake Erie. The USCG Sector Buffalo zone crosses this boundary area, ensuring a consistent FOSC and ACP. The USCG Fifth District is the Co-chair of RRT3 and will chair incident-specific activations of the RRT along this boundary, drawing appropriate representation from both RRTs. Sector Buffalo also responds for USCG Ninth District.

Inland Region III and II Boundary

The inland boundary area separates USEPA Regions II and III, which mirrors the New York/Pennsylvania, New Jersey/Pennsylvania, and New Jersey/Delaware state borders (see **Figure 3.3**). A discharge/release crossing this boundary would lead to an incident-specific RRT activation and assignment of the FOSC initially based on the origin of the discharge/release. Initial actions to spills impacting the Regional boundary area between USEPA Regions II and III would be conducted in accordance with the ACP based on the origin of the discharge/release. A specific sub-contingency plan is in development for the waters of Lake Champlain, which also has an international boundary.

Inland Region III and IV Boundary

The inland boundary area separates USEPA Regions III and IV, which mirrors the Virginia/North Carolina, Virginia/Tennessee, Virginia/Kentucky, and West Virginia/Kentucky state borders (see **Figure 3.3**). A discharge/release crossing this boundary would lead to an incident-specific RRT activation and assignment of the FOSC initially based on the origin of the discharge/release. Initial actions to spills impacting the Regional boundary area between USEPA Regions III and IV would be conducted in accordance with the ACP based on the origin of the discharge/release. Both MSU Huntington and MSU Pittsburgh are units within Sector Ohio Valley from USCG Eighth District. MSU Huntington and MSU Pittsburgh will also respond within this area as requested (see **Appendix 3-B** for MOAs authorizing cross boundary support).

Inland Region III and V Boundary

The inland boundary area separates USEPA Regions III and V, which mirrors the Pennsylvania/Ohio and West Virginia/Ohio state borders (see **Figure 3.3**). A discharge/release crossing this boundary would lead to an incident-specific RRT activation and assignment of the FOSC initially based on the origin of the discharge/release. Initial actions to spills impacting the Regional boundary area between USEPA Regions III and V would be conducted in accordance with the ACP based on the origin of the discharge/release. **Appendix 7-J** provides a reference to the Ohio River Valley Umbrella Plan that would be applicable to responses along the Ohio River.

E. RRT3 Response Policies

Response polices are developed as "ground rules" to ensure the coordination of a timely, effective response by federal and local agencies to an oil or hazardous substance incident. Response policies include USEPA/USCG jurisdictional boundaries, federal Strike Forces and Teams, communications and response equipment, trustees for natural resources, and pertinent federal and local geographical ACPs. In addition, response policies outline steps that are to be taken to ensure coordination among federal agencies; details assistance available from other agencies; and to provide protocols to be followed to secure assistance from other agencies and response organizations. Finally, response policies also contain guidance on the use of

dispersants and burning technologies which is included in the RRT's *In situ* Burning and Dispersant Preauthorization MOUs.

The Spill Response Countermeasures Workgroup is responsible for revisions to response policies in Region III. The response policies outlined in the R3RCP will be reviewed and revised as needed. The USEPA RRT3 Coordinator will consult with the USCG RRT3 Coordinator on any changes to the response polices before distributing revisions to the Executive Committee, RRT3 members and plan holders.

Priority response actions may include but are not limited to: analyzing water samples to determine the source and spread of the oil; controlling the source of discharge; measuring and sampling; source and spread control or salvage operations; placement of physical barriers to deter the spread of the oil and to protect natural resources and sensitive ecosystems; control of the water discharged from upstream impoundment; and the use of chemicals and other materials in accordance with subpart J of this part to restrain the spread of the oil and mitigate its effects.

Traditional Response Countermeasures

In general, Region 3 prefers response countermeasures that will remove the oil or hazardous material from the environment using conventional means including source control, containment (booming and other physical barriers), recovery or removal (i.e., skimming), and shoreline cleanup methods (i.e., use of flushing, vacuum, mechanical, sorbents, or manual removal). We have determined that traditional methods are the least impactful of all countermeasures. Region 3 acknowledges traditional countermeasures are not always effective or appropriate for the incident specific conditions; therefore, additional countermeasures have been evaluated for effectiveness by the RRT. The following sections detail these additional countermeasure policies.

Chemical Countermeasures Policy

As appropriate, non-traditional response measures shall be taken to recover the oil or mitigate its effects. Of the numerous chemical or physical methods that may be used, the chosen methods shall be the most consistent with protecting public health and welfare and the environment. **Sinking agents shall not be used.** Region III has developed policies and guidance for the use of chemicals and other products listed on the NCP Product Schedule (40 CFR 300.900 – Subpart J). The use of these products and strategies are authorized through several processes: pre-approval/preauthorization and on case-by-case basis. For spill situations that are not addressed by the preauthorization plans developed pursuant to paragraph (a) of 40 CFR 300.910 (Authorization of Use), the FOSC, with the concurrence of the USEPA representative to the RRT and, as appropriate, the concurrence of the RRT representatives from the states with jurisdiction over the navigable waters threatened by the release or discharge, and in consultation with the U.S. Department of Commerce (DOC) and U.S. Department of Interior (DOI) natural resource trustees, when practicable, may authorize the use of dispersants, surface washing agents, surface collecting agents, bioremediation agents, or miscellaneous oil spill control agents on the oil discharge, provided that the products are listed on the NCP Product Schedule.

Note: Coordination and notification between the regions and districts is necessary with the use of any chemical countermeasure due to shared geopolitical boundaries. Defensive actions may include the use of chemicals and other materials to restrain the spread of the oil and mitigate its effects. Any chemical countermeasure use must be in accordance with the NCP and RRT3 Guidance. **Use of chemical agents is not pre-approved in USEPA Region 5/USCG District 9 (in the Great Lakes region).**

Pre-approval/Preauthorization

The RRT3 has addressed as part of their planning activities the desirability of using appropriate chemical countermeasures, bioremediation agents, or miscellaneous oil spill control agents through development of applicable preauthorization plans to address specific context in which such products should and should not

be used. The policies themselves are located in **Appendices 6 and 7**; monitoring guidance for these policies are provided in **Appendix 8**.

Dispersants Policy

This policy provides preauthorization in specific zones and expedited approval procedures in other areas for the use of chemical countermeasures by the FOSC. For this policy, chemical countermeasures include: dispersants; surface collecting agents; and biological additives, otherwise known as bioremediation. This policy applies only in the Federal Region III portion of the designated zones in the geographic areas of responsibility for the COTP for Sector Delaware Bay and Hampton Roads. The Region III jurisdiction is divided into 4 zones:

- Zone A = Limited preauthorization
- Zone 1 = Advanced preauthorization
- Zone 2 = Trial application
- Zone 3 = No use, except in emergency situations

The Region III policy has been derived from two principal documents: the Dispersant Employment Evaluation Plan (DEEP), approved in May 1991 (see https://www.nrt.org/ResponseTools-FactSheets), and an MOU (see **Appendix 6**) among the state and federal agencies who have decision authority as defined in the National Contingency Plan (Part 300.910), which was signed January 1997. The MOU refined the policy in the DEEP, and established a policy allowing the preauthorized use of chemical countermeasures, in addition to dispersants, in certain parts of this region.

The MOU provides details on the following: preauthorization zones, zone-specific conditions, critical decision-making data, trial use policy, dispersant monitoring protocol, and products with completed Section 7 Consultation.

NCP Product Schedule: Regulations require the preparation of a "schedule of dispersants, other chemicals, and other spill mitigating devices and substances, if any, that may be authorized for use on oil discharges..." USEPA prepares and maintains this schedule, known as the NCP Product Schedule. Vendors, response personnel, other federal agencies, state agencies, and the public request and use Product Schedule information.

Decision-Making: For incidents which are in the pre-approved zone; the FOSC will make a decision with the Responsible Party; notify the RRT of the decision; and initiate dispersant operations, using the Region III Dispersant Operations Implementation Plan, which is contained in *Volume 2 of the Selection Guide for Oil Spill Applied Technologies – Operations Plans* (**Appendix 8-C**). For situations which do not have pre-approval, the checklist in Annex II of the MOU in **Appendix 6-A** plus *Volume 1 of the Selection Guide for Oil Spill Response Countermeasures – Decision Making* (**Appendix 8-C**) will be used to make a decision whether or not chemical countermeasures are applicable for that incident.

For convenience, major aspects of the MOU and the DEEP are summarized in the following matrix.

Chemical Countermeasures Pre-Approval MOU for RRT3 (coastal Delaware, Maryland, Virginia)	
Reference: **Appendix 6-A1**	
Zone A	Pre-approval for trial use only on spills 50 barrels (bbls) or less or on portions 50 bbls or less of larger spills, on waters within Big Stone Beach Anchorage in the Delaware Bay area. Trustees and states must be notified of the decision to deploy.
Zone 1	Chemical Countermeasures area approved in advance for any size spill in this zone, which is 3 nautical miles (NM) seaward of the shoreline within Federal Region III to the outermost

	of the Exclusive Economic Zone (EEZ). Use MOU checklist in **Annex II of Appendix 6-A** to make the use/non-use decision.
Zone 2	Chemical countermeasures may be approved for Trial Application Zone, 0.5 to 3 NM seaward of the shoreline or greater than 40 feet deep, excluding bays and coves (except Zone A). FOSC can only authorize a trial application of countermeasures (only on spills 50 bbls or less, or on portions 50 bbls or less of larger spills, subject to provisions of **Annex III of Appendix 6-A**), without concurrence. For operational application, FOSC must communicate with MOU signatory representatives; concurrence/non-concurrence decision is limited to within 4 hours after agency communication has been established. Use MOU checklist in **Annex II of Appendix 6-A** to make the use/non-use decision.
Zone 3	No pre-approval is granted on waters within 0.5 mile of shoreline or less than 40 feet deep, including all bays and coves. Case-by-case approval may be obtained if agency concurrence is obtained; concurrence/non-concurrence decision is limited to within 4 hours after agency communication has been established. Trial applications only on spills 50 bbls or less, or on portions 50 bbls or less of larger spills may be authorized subject to **Annex III of Appendix 6-A** provisions and agency concurrence; concurrence/non-concurrence decision is limited to within 4 hours after agency communication has been established.
Monitoring Requirements: For dispersants, the Special Monitoring of Applied Response Techniques (SMART) is the minimum monitoring protocol to be used (**Appendix 8-A**). For other chemical countermeasures, *Vol. 1 of the Selection Guide for Oil Spill Response Countermeasures – Decision Making* provides monitoring guidance (**Appendix 8-C1**).	
Section 7/Endangered Species Act (ESA): Formal consultation was completed for COREXIT 9527/9500 for MOU (**Appendix 6-A1**). RRT3 MOU consultation initiated.	

In situ *Burning Preauthorization and Policy*

This policy provides preauthorization for the use of on-water *in situ* burning by the FOSC in response to coastal oil discharges within the jurisdiction of the RRT3. *In situ* burns on land areas would require prior authorization; no preauthorization policy for burning on land currently exists. The Region III jurisdiction addressed in this MOU is divided into 3 zones:

- Zone A = Preauthorized for open water *in situ* burning
- Zone B = Waters requiring case-by-case
- Zone R = Restricted zones

The *In situ* Burn MOU (**Appendix 6-B**) among the state and federal agencies who have decision authority, as defined in the National Contingency Plan (Part 300.910) and dated January 1998, establishes Region III RRT policy and outlines on-water areas which have been preauthorized for conditional *in situ* burning. It also provides protocols which apply to the use of all burning operations under the Endangered Species Act. In addition, the policy contains equipment lists, a decision tree, and an *in situ* burning application checklist.

The components of this policy; the MOU, authorized zones, decision diagram and evaluation check list are all presented in **Appendix 6-B**. For convenience, major aspects of the MOU are summarized in the following matrix.

***In situ* Burning Pre-Approval in Coastal RRT3 (Delaware, Maryland, Virginia)**	
Reference: RRT3 Preauthorization for Use of *In situ* Burning MOU	
Zone A	Preauthorization for open-water *in situ* burning, seaward 3 NM from the shoreline baseline within Federal Region III to the outermost extent of the EEZ. Zone B: No preauthorization, waters within 3 NM of the shoreline baseline and other areas set forth in text of MOU. RRT approval needed on case-by-case basis. See the MOU for additional details.
Zone R	No *in situ* burning operations will be conducted in an "R" zone, except in the following situations: (1) it is necessary to prevent an immediate risk to human health and safety, or (2) an emergency modification of this agreement is made on an incident-specific basis.
Monitoring USCG/National Oceanic and Atmospheric Administration (NOAA) and USEPA SMART protocol recommended but operations will not be delayed pending arrival of monitoring capability (**Appendix 8-A**).	
Section 7/ESA – needs to be updated **Appendix 6-B1** is U.S. Fish and Wildlife Service (USFWS) ESA Section7 Determination Letter for *In situ* Burn (September 1997)	

Appendix 6-B also includes the following:

1. MOU Appendix I: Response Decision Making Matrix for *In situ* Burn (FOSC reference)
2. MOU Appendix II: *In situ* Burn Evaluation & Response Checklist
3. MOU Appendix III: *In situ* Burn Monitoring Plan (refer to **Appendix 8-A** for SMART Protocol)

There are other *in situ* burn policies that are not addressed in the preauthorization MOU which are located in **Appendixes 7-E and 7-F**.

Response Policies, Procedures, and Guidance

Response resources and tools, including fact sheets, guidance documents, responder guides, etc. are available on the RRTIII Website: https://www.nrt.org/ResponseTools-FactSheets.

Appendix 7 provides additional details about the RRT3 response policies and procedures and discussed in the following subsections.

Bioremediation Policy

The policy in Region III is that bioremediation is an appropriate response option to speed recovery of areas affected by oil pollution and reduce the threat of additional or prolonged impacts to human health and natural resources. This policy does not support the use of bioremediation in open, flowing waters (e.g., coastal waters, large lakes, or rivers), or the use of genetically engineered microbes. Additional details about the RRT3 Bioremediation Policy are provided in **Appendix 7-A** for additional guidance and implementation requirements.

Miscellaneous Oil Spill Control Agent (MOSCA)

According to 40 CFR 300.5, a miscellaneous oil spill agent is any product, other than dispersants, sinking agents, surface washing agents, surface collecting agents, bioremediation agents, burning agents, or sorbent that can be used to enhance oil spill cleanup, removal, treatment, or mitigation. The following are Region 3 guidance or procedures for MOSCA. We are using the method of action description provided in the Selection Guide for Oil Spill Response Countermeasures to define the MOSCA.

Elasticity Modifiers Guidance [Reserved]

Elasticity Modifiers are chemical compounds that increase the viscoelasticity of the treated oil to improve the efficiency of removal by skimmers or other methods. Elasticity modifiers dissolve in the oil, modifying the oil's mechanical properties. **Appendix 6** dictates the use of elasticity modifiers (as part of chemical countermeasures) in Region III. All requests for use of elasticity modifiers during a response are evaluated on a case-by-case basis; products must be listed on the NCP Product Schedule. Any decision to operationally use elasticity modifiers must receive RRT3 concurrence from the USEPA, USCG, affected state(s), affected federally recognized Tribes, in consultation with DOI and DOC/NOAA, and other affected federal trustees. Application and monitoring protocols are identified in Part C of the Selection Guide (**Appendix 8-C1**).

The guidance document utilized by RRT3 for use of elasticity modifiers has not been developed yet; **Appendix 7-B** is [Reserved] for future guidance.

Emulsion Treating Agents [Reserved]

Emulsion Treating Agents are chemical compounds applied to the oil to prevent the formation of an emulsion (emulsion inhibitors) or break the emulsion into separate oil and water phases (emulsion breakers). They are also commonly referred to as demulsifiers. **Appendix 6** dictates the use of emulsion treating agents (as part of chemical countermeasures) in Region III. All requests for use of emulsion treating agents during a response are evaluated on a case-by-case basis; products must be listed on the NCP Product Schedule. Any decision to operationally use emulsion treating agents must receive RRT3 concurrence from the USEPA, USCG, affected state(s), affected federally recognized Tribes in consultation with DOI and DOC/NOAA, and other affected federal trustees. Application and monitoring protocols are identified in Part C of the Selection Guide (**Appendix 8-C1**).

The guidance document utilized by RRT3 for use of emulsion treating agents has not been developed yet; **Appendix 7-C** is [Reserved] for future guidance.

Herding Agents (Surface Collecting Agents) [Reserved]

Herding Agents or surface collecting agents are chemicals that "push" or "compress" the oil on the water surface into a smaller area to form thicker slicks that are more readily recovered or burned. These chemicals exert a spreading pressure on the water surface greater than the oil slick and contain surfactants to reduce the surface tension of water, thus increasing the spreading pressure. **Appendix 6** dictates the use of herding agents (surface collecting agents) (as part of chemical countermeasures) in Region III. All requests for use of herding agents during a response are evaluated on a case-by-case basis; products must be listed on the NCP Product Schedule. Any decision to operationally use herding agents must receive RRT3 concurrence from the USEPA, USCG, affected state(s), affected federally recognized Tribes in consultation with DOI and DOC/NOAA, and other affected federal trustees. Application and monitoring protocols are identified in Part C of the Selection Guide (**Appendix 8-C1**).

The guidance document utilized by RRT3 for use of herding agents has not been developed yet; **Appendix 7-D** is [Reserved] for future guidance.

Shoreline Pre-Treatment Agents [Reserved]

Shoreline Pre-Treatment Agents are a product which prevents oil from adhering to the shoreline by reducing the oil adherence (a wetting agent) and penetration (a film-forming agent). **Appendix 6** dictates the use of shoreline pre-treatment agents (as part of chemical countermeasures) in Region III. All requests for use of shoreline pre-treatment agents during a response are evaluated on a case-by-case basis; products must be listed on the NCP Product Schedule. Any decision to operationally use shoreline pre-treatment agents must receive RRT3 concurrence from the USEPA, USCG, affected state(s), affected federally recognized Tribes

in consultation with DOI and DOC/NOAA, and other affected federal trustees. Application and monitoring protocols are identified in Part C of the Selection Guide (**Appendix 8-C1**).

The guidance document utilized by RRT3 for use of shoreline pre-treatment agents has not been developed yet; **Appendix 7-G** is [Reserved] for future guidance.

In Situ Burn for Ocean, Coastal Areas, and Inland Zones

In 2003, the RRT3 developed *in situ* burn (ISB) guidance for ocean and coastal areas. This guidance enhances, and is a direct extension of, the 1997 MOU among the USCG District 5, the USEPA, the DOI, the DOC/NOAA, the Delaware Department of Natural Resources and Environmental Control (DE DNREC), the Maryland Department of the Environment (MDE) and the Virginia Department of Environmental Quality (VDEQ).

It provides clearer and more concise guidance and decision-making tools to the RRT3 members and to the FOSC with regard to ISB in the case of oil releases to ocean, coastal, and inland areas. The guidance enhances the preauthorization for use of ISB by providing a framework for communication and coordination between the members of the RRT3 should ISB be required to mitigate an oil release. This guidance does not replace the 1997 MOU, but rather provides additional information to enhance it.

The guidance document is located in **Appendix 7-E**.

In Situ Burn for Oil Impacted Herbaceous Wetlands

In 2004, RRT3 developed ISB guidance for coastal wetlands that have been impacted by oil. Burning of wetland grasses has been practiced as a vegetation management technique for many years, yet burning of oiled wetlands is relatively unknown.

The decision to conduct *in situ* burning of herbaceous wetlands is the responsibility of FOSC and the UC. However, permission to use *in situ* burning to treat oil pollution must be approved by the incident-specific RRT. This guidance document is intended to provide the FOSC, the UC, and the RRT guidance and decision-making tools to support the use of in-situ burn for oil spills.

This guidance document is located in **Appendix 7-F**.

Solidifier Guidance [Reserved]

Appendix 6 dictates the use of solidifiers (as part of chemical countermeasures) in Region III. Product-specific preauthorization has been given to one solidifying agent, CIAgent (refer to **Appendix 6-C** for those details). All other requests for use of solidifiers during a response are evaluated on a case-by-case basis; products must be listed on the NCP Product Schedule or have received a sorbent letter from USEPA. Any decision to operationally use solidifiers must receive RRT3 concurrence from the USEPA, USCG, affected state(s), affected federally recognized Tribes in consultation with DOI and DOC/NOAA, and other affected federal trustees. Application and monitoring protocols are identified in Part C of the Selection Guide (**Appendix 8-C1**).

The guidance document utilized by RRT3 for use of solidifiers has not been developed yet; **Appendix 7-H** is [Reserved] for future guidance.

Surface Washing Agents Policy

In Region III, the FOSC is pre-authorized to test surface washing agents (SWA) subject to the constraints and practices identified in this document, including those identified through state permitting. Any post-test decision to operationally use SWAs must receive RRT concurrence from the USEPA, USCG, affected state(s), affected federally recognized Tribes in consultation with DOI and DOC/NOAA, and other affected federal trustees. This test protocol identifies specific practices to be followed for evaluating the effectiveness and biological impacts of test applications of SWAs to recover oil that has been discharged,

and has adhered to surface environments within Region III. Application and monitoring protocols are identified in Part C of the Selection Guide (**Appendix 8-C1**).

Additional details about the RRT3 Surface Washing Agents Policy (under construction) are provided in **Appendix 7-I** is for future guidance.

Other RRT3-Specific Response Policies

The RRT3 has developed or modified and/or are in the process of approving a number of response policies for use during Region III incident-specific responses. Those documents are provided in **Appendix 7-L** and are described in the following subsections.

Ohio River Valley Umbrella Plan

The Ohio River Umbrella Plan (**Appendix 7-J**) is designed to clarify roles, responsibilities, and relationships for major oil spills and hazardous substance releases along the entire length of the Ohio River. The document is not an ACP or a RCP, and it does not replace or supersede existing plans for these locations. Instead, the document clarifies existing policy and applies it in terms of concept of operations when responding to major oil discharges or hazardous substance releases along the Ohio River.

Under the NCP, the USEPA is the lead federal agency (LFA) and provides the FOSC for an oil discharge or hazardous substance release within the Ohio River Basin, except where the discharge or release involves a commercial vessel, a commercial vessel transfer operation, or the marine transportation-related portion of a facility. In these instances, the USCG provides the FOSC as specified in MOUs between USCG and USEPA Regions III, IV, and V.

Places of Refuge

The decision of whether to allow a distressed vessel into a place of refuge, including cases of force majeure[1], should be reached after consideration of the full range of potential impacts, rather than being based on a policy of wholesale denial of entry.

The purpose of these guidelines [NRT, July 2007 in **Appendix 7-K**] is to provide: (1) an incident-specific decision-making process to assist USCG COTPs in deciding whether a vessel needs to be moved to a place of refuge and, if so, which place of refuge to use; and (2) a framework for pre-incident identification of potential places of refuge for inclusion in appropriate ACPs. This document emphasizes the inclusion of USCG COTPs, UCs, RRTs, Area Committees, natural resource trustees, and other stakeholders and technical experts in the identification of potential places of refuge during pre-incident planning.

Limited Jones Act

The Limited Jones Act (Jones Act) when used in the sense of maritime law refers to federal statute 46 USC section 883. This is the act that controls coastwise trade within the U.S, and determines which ships may lawfully engage in that trade and the rules under which they must operate.

The Jones Act prohibits the "transportation of merchandise by water, or by land and water, between points in the United States . . . either directly or via a foreign port" unless the vessel was built in the U.S. and is U.S.-owned and registered under the U.S.-flag (commonly called "coastwise vessels"). The general standard for waiving the Jones Act is if doing so is "necessary in the interest of national defense." There are two types of Jones Act waivers. One type that is requested by the Secretary of Defense is granted automatically. The other type of waiver may be granted at the discretion of Secretary of the Department of

[1] Force majeure is defined as an overwhelming force or condition of such severity that it threatens the loss of the vessel, cargo, or crew unless immediate corrective action is taken.

Homeland Security (DHS). It is discretionary and may only be granted if the Administrator of the Maritime Administration (MARAD) first determines that no U.S.-flag vessels are available.

Appendix L-1 provides RRT3 with guidance and decision-making tools to support and assist FOSC/UC actions when they are pursuing the use of foreign-flag vessels to mitigate pollution or the threat of pollution when the Jones Act is applicable.

Natural Resources Trustee [Reserved]

This guidance serves as the place-holder for information necessary to meet trustee notification requirements during emergency response events. It also serves as a guide for coordination of response activities between the trustees and the FOSC. This guidance meets the requirements for the preparation of a Fish and Wildlife and Sensitive Environments Plan in the NCP (40 CFR 300.210).

The guidance document utilized by RRT3 for natural trustee resource notification has not been developed yet; **Appendix 7-L2** is [Reserved] for future guidance.

Disposal of Contact Water

This document provides guidance, decision-making tools, and documentation to support and assist the FOSC and UC decision-making in conjunction with an incident specific RRT3 when considering the operational use of decanting contact water during oil and certain hazardous substance spills within inland, ocean, and coastal waters.

The Guidance for the Decanting of Contact Water in inland, ocean, and coastal waters is provided in **Appendix 7-L3**.

Ocean Dumping

This document provides RRT3with guidance and decision-making tools to support and assist FOSC/UC actions within the region when they are pursuing emergency permission for ocean dumping to mitigate pollution or the threat of pollution when other conventional disposal methods are not viable. The information contained within this document was developed strictly to identify issues and provide consistent viewpoints and procedures to assist the FOSC/UC and alleviate potential barriers that may inhibit the decision and permit process.

The guidance document is provided in **Appendix 7-L4**.

Non-Floating Oils

Most oil spill response strategies, tactics, and equipment are based on the simple principle that oil floats. However, oil does not always float. Sometimes it suspends in the water column; sometimes it sinks to the bottom of the water body. Sometimes it does all three: floats, suspends, and sinks. Furthermore, oil that has sunk to the bottom can become re-suspended and spread by currents.

The *Sunken Oil Detection and Recovery Operational Guide* (API, 2016) identifies and documents current best practices and alternative technologies possessing the potential to more effectively detect, contain, and recover sunken oil, defined as the accumulation of bulk oil on the bottom of a water body. The technical report includes summaries and lessons learned for 36 case studies of oil spills where a significant amount of the oil sank. For each technology, it includes a detailed description of the method, advantages and disadvantages, and summary tables—the kinds of information needed to select the most effective approaches to sunken oil detection and recovery.

The *Sunken Oil Detection and Recovery Operational Guide* is provided in **Appendix 7-L5**.

Shoreline Cleanup and Assessment Technique (SCAT)

Region III utilizes the NOAA Shoreline Assessment Manual and SCAT Job Aid for conducting shoreline cleanup activities.

The documents are located on the NOAA website: https://response.restoration.noaa.gov/oil-and-chemical-spills/oil-spills/resources

Vessel Decontamination Procedures [Reserved]

Some USCG Sectors have included vessel decontamination procedures in their respective ACPs. Area committees are responsible for reviewing and updating the procedures based on inland, coastal, and offshore scenarios. The guidance document utilized by RRT3 for vessel decontamination has not been developed yet; **Appendix 7-L6** is [Reserved] for future guidance.

Volunteer Management

The use of volunteers who wish to participate and assist in a response to affected communities has long been an issue for federal decision-makers and the responsible party or potential responsible party during spills of oil and hazardous substances as well as during the response and recovery to natural disasters and acts of terrorism. There are several regulations that directly affect the use of volunteers as well as the needs and requirements of a responsible party during an oil or hazardous substance incident.

In addition to the MOU provided in **Appendix 3-D**, the RRT3 will utilize the NRT guidance document *Use of Volunteers Guidelines for Oil Spills* provided in **Appendix 7-L7**.

Coordination with Tribal Officials

https://egis.hud.gov/tdat/

The Tribal Directory Assessment Tool (TDAT) was developed by the Office of Environment and Energy (OEE) to help users identify tribes that may have an interest in the location of a U.S. Department of Housing and Urban Development (HUD)-assisted project, and provide tribal contact information to assist users with initiating Section 106 consultation under the National Historic Preservation Act (54 U.S.C. § 300101 et seq.).

Two key aspects of TDAT are its ability to:

- Link tribes' geographic areas of current and ancestral interest down to the county level, and
- Perform a variety of queries related to tribes.

State reports link tribes to their counties of interest in the particular state. Tribes may reside in or outside of that state. Check back frequently for updates. Click on any state in the tool, choose one from the list at the bottom of the page or select a tribe from the drop down control. The TDAT link is also provided in **Appendix 1**.

The guidance document utilized by RRT3 for Tribal coordination has not been developed; **Appendix 7-L9** is [Reserved] for future guidance. [Utilize Region 10 Tribal Engagement Guidance to develop RRT3 guidance document]

F. Monitoring and Evaluation Tools

To monitor the effectiveness and results of all response countermeasures, including chemical countermeasures and *in situ* burning, the RRT3 uses the SMART program. SMART is a cooperatively designed monitoring program jointly developed by the NOAA, USCG, USEPA, Centers for Disease Control and Prevention (CDC), and the Bureau of Safety and Environmental Enforcement (BSEE) (part of the agency formerly known as the Minerals Management Service). SMART relies on small, highly mobile

teams to collect real-time data using portable, rugged, and easy-to-use instruments during dispersant and *in situ* burning operations. Data are channeled to the UC to assist in decision making and to address critical questions such as the following:

- Are particulate concentration trends at sensitive locations exceeding the level of concern?
- Are dispersants effective in dispersing the oil?

In situ Burning and Dispersants

General descriptions of SMART monitoring during dispersant use or *in situ* burning are included below. For a more detailed discussion of SMART, refer to the SMART Guidance Document, which can be found in **Appendix 8-A** and at http://response.restoration.noaa.gov/smart.

RRT3 Reference Monitoring documents are provided in **Appendix 8**.

In situ Burning

For *in situ* burning operations, SMART recommends deploying one or more monitoring teams downwind of the burn at sensitive locations such as population centers. The teams begin sampling before the burn begins to collect background data. After the burn begins, the teams continue sampling for particulate concentration trends, recording them manually at fixed intervals and automatically in the data logger, and reporting to the Monitoring Group Supervisor if the level of concern is exceeded. The Scientific Support Team forwards the data, with recommendations, to the UC.

Dispersants

To monitor the efficacy of surface dispersant application, SMART recommends three options, or tiers.

- **Tier I:** A trained observer, flying over the oil slick and using photographic job aids or advanced remote sensing instruments, assesses dispersant efficacy and reports back to the UC.
- **Tier II:** Tier II provides real-time data from the treated slick. A sampling team on a boat uses a fluorometer to continuously monitor for dispersed oil one meter under the dispersant-treated slick. The team records and conveys fluorometer data to the NOAA Scientific Support Team, which forwards it with recommendations to the UC. Water samples are also taken for later analysis at a laboratory.
- **Tier III:** By expanding the monitoring efforts in several ways, Tier III provides information on where the dispersed oil goes and what happens to it. Two fluorometers are used on the same vessel to monitor at two water depths. Monitoring is conducted in the center of the treated slick at several water depths, from 1 to 10 meters. A portable water laboratory provides data on water temperature, pH, conductivity, dissolved oxygen, and turbidity.

The NRT developed the *ENVIRONMENTAL MONITORING FOR ATYPICAL DISPERSANT OPERATIONS: INCLUDING GUIDANCE FOR SUBSEA APPLICATION AND PROLONGED SURFACE APPLICATION* (**Appendix 8-B** approved May 30, 2013) to assist FOSCs and RRTs in making incident-specific decisions regarding atypical dispersant use, including expedited decision making. Region III has accepted the environmental monitoring guidance as a reference document for the R3RCP; however, incident-specific conditions may require deviation from the specific guidance.

The *ENVIRONMENTAL MONITORING FOR ATYPICAL DISPERSANT OPERATIONS* is a living document envisioned to continue addressing monitoring challenges as it becomes necessary and, as resources allow, other atypical dispersant applications. In its current version, this document contains the following:

- Subsea Application Guidance – Generally applies to the subsurface ocean environment, focusing particularly on operations in waters below 300 meters and below the average pycnocline.

- Prolonged Surface Application Guidance – Supplements and complements the existing protocols as outlined in the SMART monitoring program where the duration of the application of dispersants on discharged oil extends beyond 96 hours from the time of the first application.

Applied Response Tool Evaluation System (ARTES)

Region III utilizes the NOAA ARTES to assess whether a proposed countermeasure could be a useful response tool. It aids in evaluating conventional and non-conventional countermeasures on their technical merit rather than on economic factors. ARTES is designed to work in concert with the NCP Product Schedule and the Selection Guide for Oil Spill Response Countermeasures.

The documents are located on the NOAA website: https://response.restoration.noaa.gov/oil-and-chemical-spills/oil-spills/resources

Selection Guide for Oil Spill Response Countermeasures

Region III utilizes the NRT Selection Guide. The Selection Guide is a compilation of information and guidance on the use of applied technologies: oil spill response products and countermeasures that may be unfamiliar to federal or state OSCs or local incident commanders. It includes information on response technologies to counter the effects of spilled oil on land, on fresh water, and on coastal (estuarine to open ocean) waters.

The primary objective of this guide is to provide information and guidance to responders for the timely evaluation of oil spill response technologies that are regulated under the NCP Product Schedule (40 CFR Part 300.900), i.e., chemical and biological products and response countermeasures, for a wide range of oil spill conditions and circumstances. *Volume I of the Section Guide for Oil Spill Response Countermeasures – Decision Making* is provided in **Appendix 8-C1**. The Selection Guide has not been updated since 2012, the NCP Technical Notebook web page should be consulted for current data (https://www.epa.gov/emergency-response/national-contingency-plan-subpart-j).

Volume II of the Section Guide for Oil Spill Applied Technologies – Operations Plans is provided in **Appendix 8-C2**.

The online version of Volume I is located on the NRT website: https://sg.nrt.org/build/#.

G. Consultation Requirements and References

The FOSC in charge of oil or hazardous substance spill response actions is required to consult with various agencies to identify potential impacts of the spill response activities on wildlife, natural resources and habitat, historical/tribal properties, or other sensitive environments. The goal of the consultation process is to facilitate cooperation and understanding between agencies to meet regulatory protection requirements. **Appendix 9** contains various guidance documents as discussed in the following subsections.

Endangered Species and Critical Habitat

Region III policy, with respect to environmentally sensitive areas, is set by an MOA between USEPA, USCG, the DOI Office of Environmental Policy and Compliance, USFWS, NOAA, the National Marine Fisheries Service (NMFS), and the National Ocean Service.

This MOA coordinates the consultation requirements specified in the ESA regulations, 50 CFR 402, with the pollution response duties outlined in the NCP, to establish a general framework for cooperation and participation between the parties in the exercise of their spill planning and response duties. The primary goal of the MOA is to emphasize that adequate planning and active involvement of all participants can minimize or obviate damage to listed species and critical habitats and the resulting need for a formal consultation under Section 7(a)(2) of the ESA. The text of the MOA is included in **Appendix 9-A**.

In addition, **Appendices 9-A1** through **9-A4** provide additional guidance and policy for ESA which includes a training manual for ESA, a USCG Marine Environmental Response (MER) policy letter, the USFWS *Best Practices for Migratory Bird Care During Oil Spill Response*, and the RRT3 ESA Spill Response Screening Matrices for Coastal and Inland Areas.

Essential Fish Habitat (EFH)

Under the Magnuson-Stevens Fisheries Conservation and Management Act (50 CFR 600), Essential Fish Habitat (EFH) describes all waters and substrate necessary for fish for spawning, breeding, feeding, or growth to maturity.

Nearly 1,000 species, at multiple life stages, have an EFH description; regional managers have identified more than 100 Habitat Areas of Particular Concern for enhanced EFH conservation. All federal agencies whose work may affect fish habitats must consult with NOAA Fisheries. EFH is described for federally managed species, some of which have habitats in state waters.

Appendix 9-B is an EFH guidance document developed by the National Marine Fisheries Service Office of Habitat Conservation.

Culturally Sensitive and Historic Areas

Under the National Historic Preservation Act (NHPA) Section 106, as amended and codified in Title 54 of the United States Code, Region III abides by the guidance pertaining to culturally sensitive areas and sites of historical significance as established by a national programmatic agreement between the National Park Service (which operates the National Registry of Historic Places), the Advisory Council on Historic Preservation, the National Conference of State Historic Preservation Officers (SHPOs), USEPA, USCG, the DOI Office of Environmental Policy and Compliance, NOAA, the U.S. Department of Energy (DOE), the U.S. Department of Defense (DoD), and the U.S. Department of Agriculture (USDA). This guidance establishes national policy and procedures for the protection of cultural resources during emergency response under the NCP.

The primary contact for seeking information and expertise on local culturally sensitive areas is the SHPO for the applicable state. Federally recognized Tribes in Region III may also have culturally sensitive areas in the vicinity of an incident, and should be contacted if an incident threatens to affect tribal holdings. Contact information for the Tribes and for the SHPOs can be found in local ACPs. A copy of the programmatic agreement is available at http://www.achp.gov/NCP-PA.html and provided in **Appendix 9-C**.

Tribal Consultation

The obligation for federal agencies to engage with Indian Tribes on a government-to-government basis is based on the U.S. Constitution and federal treaties, statutes, executive orders, and policies. Federal agencies help to meet that obligation through meaningful consultation with federally recognized tribes. RRT3 will develop and maintain a federal regional contingency plan to coordinate timely, effective response by various federal agencies and other organizations to discharges of oil or releases of hazardous substances, pollutants, or contaminants.

Because the RRT3 is made up of representatives from federal agencies and the states and commonwealths, its actions are subject to state and federal laws, regulations, and policy directives. It is important to note that state/commonwealth government responsibilities may differ from those of federal agencies, and that these guidelines apply only to the federal RRT3 member agencies. This document serves as a guide to implement the laws, regulations, and policies related to federal RRT3 interactions with federally recognized tribal governments. It is the RRT3 Co-Chairs' responsibility to ensure that actions of the RRT3 are conducted in a manner consistent with these Guidelines.

It is the intent of the RRT to engage tribes as early as possible in their work process, and document that engagement. It is the responsibility of the co-chairs to determine what level of tribal engagement is required, when assignments are delegated. As described in 40 CFR 300.115, the RRT3 may function as a standing RRT for policy-making and interagency coordination, or as an incident-specific response team activated in the event of a discharge or release.

Appendices 9-D1 through **9-D6** provide additional guidance and policy for tribal consultation. Contact information available through TDAT (see **Appendix A**).

Native American Graves Protection and Repatriation Act (NAGPRA)

The Native American Graves Protection and Repatriation Act (NAGPRA), 25 U.S.C. 3001-3013, 43 CFR Part 10, was enacted to address the rights of lineal descendants, Indian tribes, and Native Hawaiian organizations to Native American cultural items, including human remains, funerary objects, sacred objects, and objects of cultural patrimony. Under the control of federal agencies and institutions that receive federal funding ("museums"), as well as the ownership or control of cultural items and human remains discovered on federal or tribal lands after November 16, 1990. The Act also provides procedures for complying with NAGPRA including the development of a written Plan of Action for the consultation process mandated by 43 CFR 10.5 whenever there is activity affecting or likely to affect Native American cultural items on federal or tribal lands. The plan of action must document compliance with the Archaeological Resources Protection Act (ARPA), especially 43 CFR 7.7 – 7.9, regarding requirements for permits on Indian lands.

Appendix 9-E provides a blank plan of action checklist for compliance with NAGPRA. The Appendix is [Reserved] for development of future guidance.

U.S. Army Corps of Engineers Nationwide Permit (NWP) – 20 (Response Operations for Oil or Hazardous Substances)

This document discusses the factors considered by the U.S. Army Corps of Engineers (USACE) during the issuance process for this Nationwide Permit (NWP). Activities conducted in response to a discharge or release of oil or hazardous substances that are subject to the NCP (40 CFR part 300) including containment, cleanup, and mitigation efforts, provided that the activities are done under either: (1) the Spill Control and Countermeasure Plan required by 40 CFR 112.3; (2) the direction or oversight of the federal on-scene coordinator designated by 40 CFR part 300; or (3) any approved existing state, regional or local contingency plan provided that the RRT3 concurs with the proposed response efforts. This NWP also authorizes activities required for the cleanup of oil releases in waters of the U.S. from electrical equipment that are governed by USEPA's polychlorinated biphenyl spill response regulations at 40 CFR part 761. This NWP also authorizes the use of temporary structures and fills in waters of the U.S. for spill response training exercises. (Authorities: Section 10 and 404.)

Guidance regarding this consultation and permit process needs to be developed. **Appendix 9-F** currently contains the Decision Document and is [Reserved] for future development.

H. Natural Resource Damage Assessment (NRDA)

The Natural Resource Damages Assessment (NRDA) is the legal process of evaluating the impacts of an oil or hazardous material spill or release on the natural resources in the area of the spill or release. Typically, NRDA takes place following cleanup because cleanups sometimes negatively affect public, habitat, and natural resources in the cleanup area (and beyond); however, NRDA activities are often conducted simultaneously with emergency response efforts to identify the extent of impacts/injuries to natural resource and public access resulting from the incident. The NRDA process is driven by law, science, economics, and public input, and is coordinated through a Liaison Officer between federal, state, and tribal trustee agencies that work together with the responsible parties to identify both negative impacts to natural resources and lost recreational uses resulting from the incident.

Additional information about NRDA is available at: https://www.epa.gov/superfund/natural-resource-damages-primer. **Appendix 10** is [Reserved] for future development of RRT3 guidance for NRDA.

SECTION 4: Regional Response Team Operations and Administration

A. RRT Activation Procedures

The RRT should be activated as an intergovernmental coordination team when an actual or potential discharge or release:

1. Exceeds the response capability available to the FOSC in the place where it occurs;
2. Crosses state boundaries;
3. May pose a substantial threat to the public health, welfare, environment, or to regionally significant amounts of property;
4. Otherwise meets the definition of a major discharge as defined in the NCP; or
5. When requested by the FOSC or an RRT Representative.

Using the above criteria, any RRT representative may request either Co-chair to activate the RRT. The request should be made to the USCG Co-chair for coastal incidents and to the USEPA Co-chair for inland incidents. The request may transmitted either verbally, in writing, by fax, or electronic mail.

When an incident occurs in the Inland Zone of Region III, the Regional Response Center (RRC) will be located in the USEPA Regional Office Philadelphia, Pennsylvania. The RRC will provide a duty officer (an FOSC) and will coordinate communication, information, limited supplies and equipment and other personnel and facilities necessary to allow proper functioning and administration.

Regional Response Center	District Response Center
USEPA, Philadelphia, PA	USCG, Portsmouth, VA
215-814-3255	757-398-6231
215-814-3254 fax	757-398-6391 fax

When an incident occurs in the Coastal Zone or in specified harbor areas in Region III, the RRC will be located at the appropriate USCG District office. The USCG has three district offices that serve Federal Region III, although only one of them is physically located within the region.

Location	District Office
Incidents involving specific harbors in Western Pennsylvania, and West Virginia: contact is Commander, Eighth USCG District, New Orleans, LA.	504-589-6225
Incidents occurring in Eastern Pennsylvania, Delaware, Maryland, Virginia, and the District of Columbia: contact is Commander, Fifth USCG District, Portsmouth, VA.	757-398-6231
Incidents involving the Great Lakes portion of Northwestern Pennsylvania: contact is the Ninth USCG District, Cleveland, Ohio.	1-800-321-4400

Once a Co-chair decides to activate the RRT or receives such a request from another RRT representative, the other Co-chair will be notified of the decision. The USCG Co-chair will assume the lead for coastal incidents and the USEPA Co-chair will be the lead for inland incidents. Notification of remaining RRT members will be the responsibility of the lead Co-chair and may be delegated to the RRT Coordinator or other staff representatives. The RRT Coordinator may use the "Incident-Specific Region III Regional Response Team III Activation Quick Response Guide" located in **Appendix 11**.

Arrangements for meeting locations and/or teleconferences will be the responsibility of the incident-specific Chair or designated representative. The recording and distribution of summaries of meetings or teleconferences conducted upon RRT activation shall also be the responsibility of the lead Co-chair or other designated representative.

The RRT will be deactivated by the incident-specific Chair typically after a discussion with the RRT Agencies. The incident-specific Chair, or his/her representative will be responsible for notifying RRT members of the deactivation. The dates and times for activation and deactivation should be included in POLREPs or other summaries generated by the FOSC or the incident-specific Chair and/or documented in summaries of meetings or teleconferences of the RRT

B. Communication Procedures

As stated above, the RRT3 is activated to provide support to the FOSC. In a support role, the RRT3 will coordinate with the Joint Information Center (JIC) initiated by the response. RRT3 communications procedures for crises include the following components:

- General Approach (support to FOSC)
- Notification Procedures
- JIC Coordination
- Internal Communications (e.g., RRT incident-specific members to FOSC)
- External Communications (e.g., agencies outside the RRT, NRT level agencies, and community relations)
- Social Media (see the *RRT3 Information Management Plan*)

Dissemination and communication of information to the public and RRT members are discussed in Section 4-J (Distribution of Information).

General Approach: RRT3 involvement is at the FOSC request. RRT3 will a use the JIC established for the response for communications when dealing with incidents affecting multiple local jurisdictions, as well as catastrophic, severe or nationally significant incidents. The organization of the communication team should follow the structure outlined in the manual titled, *National Response Team (NRT) Joint Information Center Model*, dated April 2013 (available on the www.nrt.org/RRT3_RCP website). Once the JIC is established, the JIC becomes the focus of all internal and external communication, coordinating and unifying the participants responding to the crisis to generate a unified communication message.

Notification: The FOSC will notify the RRT3 Co-chairs when the incident requires communication support. The appropriate RRT3 Co-chair will initiate the incident specific RRT3 in support of the FOSC. This may include meetings and conference calls to address issues (i.e., boundaries, resource needs, authorization for specific product use, etc.) brought forth by the FOSC; and may involve coordination with the NRT and other supporting agencies.

Joint Information Center (JIC) Coordination: The FOSC will establish and lead a JIC and include the staff from other agencies (including both local and state public information officers) and industry representatives responding to the crisis. The staff of the JIC will work as a team producing a unified message for the public. The JIC will be the focus of internal and external communication and follow the organization prescribed by the *National Response Team Joint Information Center Model – Collaborative Communications During Emergency Response* (April, 2013). The RRT3 will coordinate utilizing the JIC structure to coordinate timely, accurate information transfer to the public and other stakeholders.

Internal Communications (e.g., RRT3 incident-specific members to FOSC): It is more efficient to negotiate with participants of the incident on a joint message rather than explaining multiple, and possibly conflicting, messages to the public and the media. Planning, scheduling and logistics for communications

may be funneled through the JIC to ensure a unified message or to coordinate incident-specific member decision-making.

External Communications (e.g., agencies outside the RRT, NRT level agencies, and community relations): Communication efforts will be coordinated through the JIC to provide information to the media, residents, and officials. Coordination between NRT and RRT will be conducted at the request of the FOSC or if the incident response is beyond the capabilities of the incident-specific member agencies. The NRT and RRTs can access key assets and capabilities of the 15 member agencies of the NRS to support federal agencies, states, and local responders in their efforts to mitigate the danger to public health and the environment from a hazardous release. RRT coordination with the NRT can also be beneficial for the resolution of issues associated with multi-regional and international scope. (https://www.nrt.org/NRT/About.aspx).

Social Media: refer to Information Management and Outreach Plan for Best Management Practices on how to handle social media.

Once finalized, the plan will be available on the RRT3 Website: https://www.nrt.org/RRT3_PLANS

C. Responding to an Incident-Specific Activation

The overall goal of RRT3 is to maintain a high state of emergency readiness and to assist the FOSC upon request, providing immediate and effective guidance and assistance for all environmental emergency responses.

RRT3 involvement is directed by 40 CFR Part 300 in support of the FOSC. The role of the incident-specific RRT is determined by the specifics of the response. Incident-Specific activation procedures are discussed in Section 4A and **Appendix 11**.

Call-up Procedures

Overview

In the event of an actual or potential medium or major oil spill, the RRT must be notified. This document describes

- Notification responsibilities.
- Conference call procedures.

Notification Responsibilities: RRT Coordinator

The RRT Coordinator will make the calls to the appropriate individual RRT3 members if the incident meets the criteria defined above. Each incident should be assessed to determine exactly which agencies require notification. Once notified, RRT3 members should consider whether they have resources to offer and then take the initiative to call the FOSC.

Conference Calls: Overview

Conference calls are arranged by the Incident-Specific Co-chair and may be delegated to the RRT Coordinator or other staff representatives. Conference call procedures are provided in **Appendix 11**.

National Response Center (NRC) phone number

The telephone numbers for the NRC are as follows:

1-800-424-8802 or

1-202-267-2675

D. Cross-Boundary Incident-Specific RRT

Incidents that affect two or more regions may require the activation of a single cross-boundary incident-specific RRT, which will be chaired and coordinated by the lead agency providing the FOSC for the incident. If the incident FOSC transitions to another Region or District, the incident-specific chair should likewise transfer. Participation by other federal and state agencies will be determined based on the location of the incident, the potentially impacted states/commonwealths, and the agency expertise that is required to address response issues and conditions.

It is important for a cross-boundary incident-specific RRT to recognize that there may be differences and inconsistencies between the affected regions' plans, protocols, and guidance documents. The purpose of the incident-specific RRT is to identify and resolve such issues, and to provide the FOSC with technical assistance and support to address such cross-boundary issues. For example, in the event the FOSC requests consultation and concurrence on the use of chemical countermeasures in a cross-boundary incident, members of the cross-boundary incident-specific RRT need to consider their respective regional plans and policies, while also identifying any differences in the involved region's plans and policies. The cross-boundary incident-specific RRT should meet and deliberate jointly, and consensus should be reached that meets the requirements and preferences of the affected states and agencies involved.

Cross-boundary support MOAs between RRT III and neighboring regions (Regions 2, 4, 5, and USCG District 8) are included in **Appendix 3-B**. Regional boundaries are outlined in Section 3.D of the R3RCP and applicable jurisdictional boundaries between the USCG Coastal and USEPA Inland Zones are provided in **Appendix 4**.

E. RRT Committees and Workgroups

The RRT3 has established several Standing Workgroups to address the various issues of concern to the RRT and FOSCs relative to significant oil and hazardous substances incidents. These workgroups are concentrating on specific areas of the RRT3 Goals. The RRT3 has assigned to various workgroups the responsibility for preparing recommendations and actions for each of the supporting goals. In addition to the Standing Workgroups outlined below, the RRT retains the authority to create ad hoc workgroups as situations or issues arise.

Executive Committee: The Executive Committee is co-chaired by USEPA and the USCG and its membership consists of the chairs of each RRT standing workgroup, the RRT Coordinators, a representative for the state/commonwealths, and a representative for the Trustees. The Executive Committee will meet at least semiannually and provides the primary focus for the direction of the RRT and its committees and identifies and resolves possible overlap of committee efforts. The Executive Committee is also responsible for the development of and adherence to the RRT's Work Plan, from which work plans and required reports will be derived.

Inland Area Committee: The Inland Area Committee provides planning and coordination of preparedness and response actions are accomplished through the Area Committees. There is only one Inland Area Committee for the entirety of USEPA Region III. This Inland Area Committee membership includes federal, state/commonwealth, and local representation. Members of the Inland Area Committee are appointed by the Region III Inland Area Committee Administrator. In addition to the standing Inland Area Committee membership, active participation by other interested parties is encouraged for all planning activities under the authority of the Inland Area Committee. The Region 3 OSC Planning Dashboard (the "Dashboard") is in online interactive data management site that also houses the USEPA Region 3 IACP Viewer (an interactive geographic information system [GIS]).
https://www.eparm.net/R3IACP/Default.aspx

Spill Response Countermeasures (SRC) Workgroup: The Spill Response Countermeasures Workgroup is responsible for examining the various methods of recovering, mitigating, and treating oil and hazardous

substance discharges/releases. The Workgroup is also tasked to develop and update criteria (including preauthorization), policy, advice, and recommendations for the following supporting goals:

- Develop and update spill countermeasures for inland and coastal areas.
- Develop, maintain, and disseminate a database of alternative oil spill response tools/techniques and encourage the FOSC's consideration of these tools/techniques.
- Develop new strategies for mitigating spills (i.e. protective booming).
- Prepare additional advice for FOSCs in areas of emerging technologies.

Information Management and Outreach (IMO) Workgroup: The Information Management and Outreach Workgroup conducts the assessment of communications technologies, coordination of information management/communications systems between member agencies, and the development of the RRT3 webpages (https://www.nrt.org/site/region_list.aspx?region=3).

As part of the outreach component, the workgroup is tasked to (a) explain the responsibilities, activities, and accomplishments of the RRT to its partners in the response community and the public and (b) to facilitate understanding and cooperation with the NRT and other RRT local and state response planning staff. The RRT Outreach Workgroup is also tasked to develop criteria, advice, and recommendations for the following supporting goals:

- Encourage the state and local response community to improve its preparedness for response.
- Conduct or participate in training and exercises as necessary to encourage preparedness activities of the response community within the region.
- Encourage public information and community relations during response activities.
- Develop outreach programs to improve awareness for RRT roles.

The chairs of each workgroup are responsible for establishing priorities and scheduling their workgroups and providing potential work items for the RRT and Executive Committee to consider in accordance with the RRT direction.

Consultation, Natural Resources and Damage Assessment (CNRDA) Workgroup: The CNRDA Workgroup is responsible for examining the Section 7 Consultation, improving best management practices for natural and socioeconomic resources, and Natural Resource Damage Assessment and Restoration (NRDAR) laws, requirements, and processes. The Workgroup has provided training on NRDAR processes to RRT members. The Workgroup seeks to identify approaches for assuring an early initiation of the Consultation and NRDA assessment processes without interfering with response actions being directed by the FOSC.

Regional Contingency Plan (RCP) Rewrite Workgroup: The RCP Rewrite Workgroup is responsible for drafting and updating the R3RCP. The RCP Rewrite Workgroup is also tasked to develop criteria, advice, and recommendations for the following supporting goals identified in the RRT3 Work Plan:

- Recommend revisions of the NCP to the NRT based on observations of response operations.
- As requested by the NRT or RRT, the FOSC/Remedial Project Manager (RPM) shall submit a complete report on the removal operation and the actions taken. The RRT shall review the FOSC report and send to the NRT a copy of the FOSC report with its comments or recommendations within 30 days after the RRT has received the FOSC report.
- The FOSC report shall record the situation as it developed, the actions taken, the names of the resources committee members, and the problems encountered.

Training Workgroup: The Training Workgroup is responsible for facilitating RRT3 membership discussions to identify training and presentation topics based on current issues of importance to the region, nationally, or internationally (i.e., recent responses, fuel transportation issues, and policy updates).

The RRT Workgroups should convene by teleconference between RRT meetings as needed. The RRT Coordinators, upon request of the Committee Chair, are responsible for arranging these teleconferences. Each committee may also meet in person or hold additional teleconferences as required to meet its goals and objectives.

F. RRT Meetings

The RRT generally meets twice a year, alternating between varying sites/states within the region. The RRT meets to:

- Review and comment on recent response actions or other issues related to the preparation, implementation, or exercise of regional and/or local plans;
- Recommend revisions of the RCP, the various ACPs, and the NCP;
- Review FOSC actions to ensure that the RCP and ACPs are effective;
- Conduct advance planning for the use of dispersants, surface collection agents, burning agents, biological additives, or other chemical agents in accordance with Subpart J of the NCP; and
- Conduct or participate in training and exercises as necessary to encourage preparedness activities of the response community within the region.

USEPA and USCG Co-Chairs will decide among themselves how the responsibility for arranging meeting locations, agendas, and meeting minutes will be divided.

The USCG and USEPA RRT Coordinators shall be responsible for developing and finalizing the agenda for each RRT meeting.

The Co-Chairs will decide among themselves the responsibility for moderating the RRT meetings and individual sessions with the assistance of their respective Alternate Co-Chairs, Coordinators, and USEPA Superfund Technical Assessment and Response Team (START) contractors. This includes introducing speakers, maintaining adherence to the agenda and its timeframe, determining appropriate times for breaks, and adjusting the agenda to fit the changing schedules of presenters and other similar "last minute" changes. Separate closed meetings between the Co-Chairs, Coordinators, and START contractors are held during the RRT3 meetings to discuss and resolve issues encountered since the last RRT3 meeting.

The RRT Coordinators and START contractors shall be responsible for recording a summary of each meeting, preparing the summary, and distributing it to RRT members and participants within 30 days of the meeting. The RRT Coordinators and START contractors will assist each other in the review and editing of the meeting summary. The meeting summary and presentations (as approved by the presenters) will be uploaded to the RRT3 Meetings website (for the respective year).

G. RRT Work Plans

The RRT3 Work Plan outlines the specific work action items that the RRT will address, initiate, or develop during the calendar year. This plan will set the priorities of the RRT based on the administrative and operational resources available to the RRT.

The development of the RRT3 Work Plan sets the annual project/issue priorities for the organization. The work plan is generated based on:

- Setting the priority for the issues or projects having the greatest need to be addressed by the RRT.

- The issues or projects should be within the RRT's administrative or operational span of control.
- The issues or projects addressed annually need to be doable by the RRT based on member agency work load, funding, and expertise.
- The work plan is a living document. The issues or projects addressed annually by the RRT may be adjusted or changed at any time by the RRT or Executive Committee based on the changing needs of the response community.

The RRT Executive Committee, with input from Workgroup Chairpersons, will develop the RRT3 Work Plan for submittal to the RRT by January 31st of each calendar year. The USCG and USEPA RRT Coordinators typically are responsible for ensuring that the Work Plan is finalized.

H. RRT Annual Reports

The RRT is required to submit a report that summarizes recent activities, organizational changes, operational concerns, and efforts to improve state and local coordination. The NRT has issued an outline of the preferred format of the reports and has instructed the RRTs to provide the reports once annually, by January 31, in lieu of semi-annual reports as required by the NCP.

The USEPA RRT Coordinator shall be responsible for preparing the annual report in coordination with the USEPA Region III FOSC. The USCG RRT Coordinator shall ensure sector FOSCs provide the USEPA RRT Coordinator with any pertinent USCG activities to be included in the report and will assist in collecting information from other RRT member agencies for inclusion in the report.

Once the annual report is finalized, the USCG RRT Coordinator shall ensure the signature of the USCG Co-Chair and forward the report to the USEPA RRT Coordinator. The USEPA RRT Coordinator shall ensure the signature of the USEPA Co-Chair and shall forward the report to the NRT Executive Secretary.

I. RRT Requests for FOSC Reports

The NCP requires that FOSC Reports be prepared "as requested by the NRT or RRT." FOSCs may, of course, also issue FOSC Reports on their own initiative, independent of an RRT or NRT request. The RRT should consider requesting an FOSC Report when the pollution response involved:

- an unusual challenge;
- a unique or complex issue (e.g., intergovernmental coordination, use of a new technology, etc.);
- a decision that creates precedent; or
- a lesson learned that should be made known regionally or nationally.

These FOSC Reports are required by Subpart B (Responsibility and Organization for Response) 40 CFR 300.165 and is referenced in **Appendix 2**.

J. Distribution of Information

The RRT3 website (https://www.nrt.org/site/region_list.aspx?region=3) provides for dissemination of RRT-related policies, information and materials such as mission, vision and goals of RRT3, meeting announcements, meeting minutes, and the R3RCP.

The IMO Workgroup has developed an Information Management Plan that describes the process for approving and/or securing RRT3-developed documents. The Plan also details the layout of the RRT3 website pages and information contained therein.

Information Management Support: Several other websites have been provided to support the information management needs of the Response Community by the Hazardous Materials Response Division, Office of Response and Restoration (OR&R), National Ocean Service, and NOAA.

- **Incident News:** During complicated spill events, NOAA provides communications to the UC information management support at a website located at https://incidentnews.noaa.gov/. Information on this website must be both provided by and approved by the UC for that specific spill incident. All information on this website is accessible by other emergency responders, headquarters organizations, the media, and the general public.
- **Response Link:** A government system for sharing information and documents with incident responders. Federal personnel can email orr.incidentnews@noaa.gov to request a Response Link account. All other Response Link account requests must be sponsored through the local NOAA Scientific Support Coordinator (SSC). During some spill events, NOAA also provides information management services to members of the RRT3 at a password-protected website at https://responselink.orr.noaa.gov/.

- **NOAA OR&R Public Website:** NOAA also provides to responders and the public a website at http://response.restoration.noaa.gov. This website contains detailed information about oil and chemical spill response and provides to responders many resources to help plan and respond to oil and chemical spill emergencies.

  EPA OSC Website: This site is intended to be a resource for USEPA FOSCs to access, track, and share information with FOSCs throughout the country and includes links, resources, and information about Health & Safety, Standard Operating Procedures, OSC Task Force Toolbox & Phonebook, and the Voluntary Exercise Program. https://response.epa.gov/Default.aspx.

K. RRT Exercises

To facilitate preparedness, the RRT3 exercise cycle is based on the *2016 National Preparedness for Response Exercise Program (PREP) Guideline*[2] and consists of:

1. Notification Drill – involves to verify and update POC information;
2. Activation Drill – where standing RRT3 members call in for a drill response;
3. Tabletop Exercise – is a discussion based exercise involving standing RRT3 members to explore a scenario to determine how the RRT would be engaged in a response;
4. Functional Exercise – is designed to validate and evaluate capabilities, multiple functions and/or sub-functions, or interdependent groups of functions; and
5. Full-Scale Exercise – typically the most complex and resource-intensive type of exercise that include many participants operating under cooperative systems such as the ICS or UC. Events are projected through an exercise scenario with event updates that drive activity at the operational level. These exercises are usually conducted in a real-time, stressful environment that is intended to mirror a real incident.

The area and regional exercise cycle is not addressed in regulations, and by policy is set at four years.

[2] The 2016 National Preparedness for Response Exercise Program Guidelines is available at https://homeport.uscg.mil/Lists/Content/Attachments/1308/New%202016%20PREP%20Guidelines.pdf or https://www.epa.gov/oil-spills-prevention-and-preparedness-regulations/2016-national-preparedness-response-exercise .

SECTION 5: Regional Response Team Agency Roles, Capabilities, and Support

A. Federal Departments and Supporting Agencies

The Standing RRT3 is made up of 14 federal departments and supporting agency members as described in the following subsections. Additional information about federal agency roles and responsibilities to Region III and the RRT are provided in fact sheets posted under "Documents" on the RRT3 Response Tools-Fact Sheets website: www.nrt.org/ResponseTools-FactSheets.

U.S. Environmental Protection Agency (USEPA)

The USEPA is the lead federal agency to respond to oil spills and reported releases of a hazardous substance(s) in the inland area. USEPA has a number of assets within the region to support emergency response actions:

- **Superfund Technical Assessment and Response Team (START)** are contracted personnel trained to provide technical expertise in health and safety, multimedia field monitoring and sampling, incident documentation, cost monitoring, cleanup restoration, and disposal techniques.
- **Emergency Response and Rapid Remediation Services (ERRS)** are contracted personnel who support cleanup operations, including equipment to control, stabilize, and clean up hazardous substances, and subcontract transportation and waste disposal.
- **Response Support Corps (RSC)** is made up of USEPA employees who provide critical support during USEPA emergency response efforts, but whose everyday/core responsibilities do not require routine emergency response duties.
- **Scientific Support Coordinator (SSC)** assists with responses to actual and potential hazardous substance releases and provides technical expertise for a variety of subject matter.
    - **Environmental Response Team (ERT)** serves as USEPA's SSC and provides experienced technical and logistical assistance in responding to environmental emergencies, such as oil or hazardous materials spills. ERT also provides assistance in characterization and cleanup of hazardous waste sites.
- **Chemical, Biological, Radiological, and Nuclear Consequence Management Advisory Division (CBRN CMAD)** provides scientific and technical expertise for all phases of consequence management, including sampling, decontamination, and clearance, with a focus on operational preparedness. CMAD provides specialized expertise, such as biochemistry, microbiology and medicine, health physics, toxicology, HVAC engineering, and industrial hygiene. CMAD is available to assist local, national, and international agencies supporting hazardous substance response and remedial operations, including Nationally Significant Incidents.
- **Radiological Emergency Response Team (RERT)** provides response and support for incidents or sites containing radiological hazards. RERT responds to emergencies requiring the cleanup of radioactive substances. RERT provides onsite and lab-based radiation risk monitoring services.
- **Remote Sensing and Imagery Analysis Service (RSIAS)** provides web access to users and overlay mapping. The Remote Sensing and Imagery Analysis Service (RSIAS) provides geographically-based data collection and analysis using technologies such as satellite imagery, aerial photography, LIDAR (Light Detection and Ranging).
- **Critical Incident Stress Management Team (CISMT) provides** professional on-scene critical incident stress management support for traumatic incidents or situations.

- **National Criminal Enforcement Response Team (NCERT)** supports environmental crime investigations involving chemical, biological, or radiological releases to the environment. NCERT's specially trained Law Enforcement Officers that collect forensic evidence within contaminated zones; serve as law enforcement liaisons with other law enforcement agencies; and provide protective escorts to USEPA's FOSCs, contractors and other USEPA Special Teams during national emergencies.

Department of Homeland Security (DHS)

U.S. Coast Guard (USCG)

Protects the public, the environment, and U.S. economic interests – in the nation's ports and waterways, along the coast, on international waters, or in any maritime region as required to support national security. Provides the following assets during a response:

- **National Strike Force (NSF)** provides highly trained, experienced personnel and specialized equipment to USCG and other federal agencies to facilitate preparedness for response and response.
- **Public Information Assist Team (PIAT)** provides crisis media relations support to a USCG or USEPA FOSC.
- **National Pollution Funds Center (NPFC)** manages funds for the OSLTF and is an independent unit of the USCG that serves as fund manager for the OSLTF set up under the Clean Water Act.
- **Basic Ordering Agreements (BOAs)** are pre-negotiated agreements that maintain an extensive commercial capability for pollution response using a standing "time and materials" contract for equipment and personnel from commercial firms that may be activated.

Federal Emergency Management Agency (FEMA)

FEMA provides guidance, policy, and technical assistance in emergency preparedness planning, training, and exercising activities for state and local governments. Advises and aids lead agencies in coordinating federal agencies during disaster responses, typically under the Stafford Act.

U.S. Department of Defense (DOD)

DoD includes both U.S. military (Air Force, Army, National Guard, Navy, and Marines) and nonmilitary (civilian) personnel dedicated to protecting the security of our Nation. DoD acts when oil or hazardous substances are released from a facility or vessel under its jurisdiction and provides the FOSC during an incident involving hazardous substances, pollutants, or contaminants on or from DoD property (40 CFR 300.120(c)).

U.S. Army Corps of Engineers (USACE)

USACE equipment and expertise are available for removing navigational obstructions and performing ship structural repairs. Also assists with coordinating federal public works and engineering-related support.

U.S. Navy

Provides knowledge and experience in ship salvage, shipboard damage control, and diving. U.S. Navy will provide U.S. Navy oil spill containment and recovery equipment and manpower, as well as equipment for ship salvaging, shipboard damage control, and diving through the Naval Sea System Command Supervisor of Salvage (SUPSALV).

U.S. Department of Energy (DOE)

DOE has been identified as the FOSC for releases of hazardous substances, pollutants, or contaminants (but not oil) when the release is on, or the sole source from any facility or vessel, including any bareboat vessel

chartered and operated under the jurisdiction, custody or control of DOE. DOE staff aids in the control of immediate radiological hazards.

Radiological Assistance Program

Radiological Assistance program provides DOE first response capability to federal, state, local and tribal governments for incidents involving radiological incidents.

- Provide technical advice throughout the DOE complex in response to:
  - Nuclear weapons accidents and incidents
  - Possible acts of radiological/nuclear terrorism
  - Radiological accidents
  - Lost or stolen radioactive materials
- Provide access to expertise in nuclear weapons design, nuclear/radiological materials characterization, and radiological detection and characterization
- Deployable capabilities configured for a rapid, time-phased response

U.S. Department of Agriculture (USDA)

USDA is made up of various agencies that have scientific and technical capabilities to measure, evaluate, monitor, and control situations where natural resources, such as soil, water, wildlife, and vegetation, have been impacted. The agencies include the following:

- **U.S. Forest Service** is responsible for protection and management of national forests and national grasslands.
- **Agriculture Research Service** conducts research in animal and plant protection and production.
- **Natural Resources Conservation Service** provides knowledgeable resources in soil, agronomy, engineering, and biology.
- **Animal and Plant Health Inspection Service** can respond in an emergency to regulate movement of diseased or infected organisms to prevent the spread and contamination of non-affected areas.
- **Food Safety and Inspection Service** prevents meat and poultry products contaminated with harmful substances from entering human food channels.

U.S. Department of Commerce (DOC)

National Oceanic and Atmospheric Administration (NOAA)

NOAA has multiple roles in a spill response, both as a component of the response (spill response and damage assessment) and as a steward of the NOAA trust resources. NOAA provides scientific support for resources and contingency planning in coastal and marine areas.

U.S. Department of Health and Human Services (DHHS)

Centers for Disease Control and Prevention (CDC) / Agency for Toxic Substances and Disease Registry (ATSDR)

Supports the RRT and serves the public by using the best science, taking responsive public health actions, and providing trusted health information to prevent harmful exposures and disease related to toxic substances.

In addition, the following DHHS are available to the RRT: the National Institute of Health (NIH) / National Institutes for Environmental Health Sciences (NIEHS) which also offers training on the health effects of oil spills and technical guidance regarding worker health and safety through the CDC / National Institute for Occupational Safety and Health (NIOSH).

U.S. Department of the Interior (DOI)

Office of Environmental Policy and Compliance

DOI protects, manages, and provides access to our Nation's natural and cultural resources. Numerous agencies are available to coordinate during an incident response, including the following:

- **U.S. Fish and Wildlife Service (USFWS)** provides support and location of migratory birds, endangered species, and wildlife habitats.
- **U.S. Geological Survey (USGS)** offers expert advice in geology, geochemical data, GIS and mapping, groundwater hydrology, and ground and surface water data.
- **Bureau of Land Management (BLM)** makes available expertise in minerals, soils, vegetation, habitat, archeology, and hazardous materials.
- **Bureau of Safety and Environmental Enforcement (BSEE)** works to promote safety, protect the environment, and conserve resources offshore through vigorous regulatory oversight and enforcement.
- **Bureau of Ocean Energy Management (BOEM)** manages development of U.S. Outer Continental Shelf energy and mineral resources in an environmentally and economically responsible way.
- **Office of Surface Mining Reclamation and Enforcement** ensures land is restored to beneficial use when mining is finished.
- **National Park Service (NPS)** provides expertise on historical, archaeological, and recreational sources as well as sites on the National Historic Register.
- **Bureau of Indian Affairs (BIA)** protect Native American trust resources and facilitates an active role in planning and response for Tribal governments.

U.S. Department of Justice (DOJ).

Provides expert advice on complicated legal questions arising from discharges or releases and federal agency responses. Also DOJ represents the U.S. Government in litigations relating to discharges or releases.

U.S. Department of Labor (DOL).

Occupational Safety and Health Administration (OSHA)

Provides technical assistance and support, resources, and coordination on preparedness, planning, response and recovery activities for emergencies involving hazardous substances, pollutants and contaminants, oil, and weapons of mass destruction in natural and technological disasters and other environmental incidents of national significance. OSHA can be activated under FEMA to lead implementation of the NRF worker safety and health support annex to protect the safety and health of response and recovery workers.

U.S. Department of Transportation (DOT)

DOT is the federal safety authority for the transportation of hazardous materials by air, rail, highway, and water. Under the NRF, DOT is the primary federal agency for the Emergency Support Function – 1, Transportation (ESF-1).

Federal Transit Administration (FTA)

The FTA is one of DOT's 10 modes of transportation and provides financial and technical assistance to local public transit systems. FTA also oversees safety measures and helps develop next-generation technology research through policy development, hazard investigation, data collection, risk analysis,

oversight programs and information sharing. The FTA represents all of the DOT Administrations on the RRT3 membership, including:

- Pipeline and Hazardous Materials Safety Administration (PHMSA),
- Federal Aviation Administration (FAA),
- Maritime Administration (MARAD),
- National Highway Traffic Safety Administration (NHTSA),
- Federal Highway Administration (FHWA),
- Federal Motor Carrier Safety Administration (FMCSA), and
- Federal Railroad Administration (FRA).

Nuclear Regulatory Commission

In response to an event at a Nuclear Regulatory Commission-licensed facility or an event involving Nuclear Regulatory Commission-licensed material that could threaten public health and safety or the environment, Nuclear Regulatory Commission activates its incident response program at its Headquarters Operations Center and its Regional Incident Response Centers located in King of Prussia, PA. To provide expert consultation, support, and assistance to state and local public safety officials responding to the event.

General Services Administration (GSA)

Provides logistic and telecommunications support to federal agencies during emergency response operations. Includes assisting local, state, tribal, territorial, insular area, and federal governments in the direct purchase and assisted acquisition of supplies, services, and equipment utilizing the GSA Schedules. Additionally, GSA provides leasing services for facilities and real property.

B. Federally Recognized Tribes

The roles and responsibilities of the federally recognized tribes to the RRT3 is mandated by 40 CFR 300.610 as a trustee and/or a state representative 40 CFR 300.115(h); 300.180(a) and (b).

The tribal chairmen (or heads of the governing bodies) of Indian tribes, as defined in §300.5, or a person designated by the tribal officials, shall act on behalf of the Indian tribes as trustees for the natural resources, including their supporting ecosystems, belonging to, managed by, controlled by, or appertaining to such Indian tribe, or belonging to a member of such Indian tribe, if such resources are subject to a trust restriction on alienation. When the tribal chairman or head of the tribal governing body designates another person as trustee, the tribal chairman or head of the tribal governing body shall notify the President of such designation.

The following Indian Tribes, all located in Virginia, are federally recognized in Region 3 (see **Figure 5.1**):

1. Pamunkey – retains Indian reservation land (1,200 acres) on the Pamunkey River adjacent to present-day King William County, Virginia;
2. Rappahannock – maintains 132 acres of land in Indian Neck, King and Queen County, Virginia;
3. Monacan – the Monacan Nation is headquartered in Amherst County, Virginia, owning 110+ acres on Bear Mountain;
4. Nansemond – the tribe currently owns no land; however, tribal members live in the Suffolk and Chesapeake Areas and are hoping to acquire 100 acres in Mattanock, Virginia to build a tribal center, museum, and living history area on ancestral lands;
5. Upper Mattaponi – purchased 32 acres of land along the upper reaches of the Mattaponi River, King William County, Virginia;
6. Chickahominy – tribal center is located in Charles City County, Virginia along the Chickahominy River (retaining approximately 110 acres of land), and
7. Eastern Chickahominy – maintains 41 acres of land in New Kent County, Virginia.

Other Federally Recognized Tribes with and Interest in Region III

The RRT3 has identified tribes with geographic areas of current and ancestral interest within the region; appropriate tribal contact information is available at https://eqis.hud.gov/tdat to assist with initiating Section 106 consultation. The Tribal Directory Assessment Tool (TDAT) is a web-accessible database that contains information about federally recognized Indian tribes and lists names and contact information for tribal leaders and Tribal Historic Preservation Officers (THPOs). Points of Contact for the tribes are also maintained in **Appendix 1**.

C. States/Commonwealths

Additional information about state/commonwealth roles and responsibilities to Region III and the RRT are provided in fact sheets posted under "Documents" on the RRT3 Response Tools-Fact Sheets website: www.nrt.org/ResponseTools-FactSheets.

Delaware

Delaware Emergency Management Agency (DEMA) is the lead agency for coordination of comprehensive emergency preparedness and response. The governor has appointed the Director of DEMA as the State Incident Commander by Executive Order #13. State of Delaware designates the DE DNREC as the agency unit responsible for the response to oil and hazardous substances.

24-hour notification number is (800) 662-8802

District of Columbia

District of Columbia's Homeland Security and Emergency Management Agency (HSEMA) coordinates the city's response to disasters, emergencies, severe weather conditions, and other catastrophic events. It works closely with other emergency response agencies, including the Metropolitan Police Department (MPD) and the District of Columbia Department of Fire and Emergency Medical Services and other District and federal agencies, as well as with major utility companies and organizations such as the Red Cross and Salvation Army. The DC Department of Energy and Environment (DOEE) is also a primary response member of the Standing RRT3.

24-hour notification number for HSEMA is (202) 727-6161

24-hour notification number for DOEE is 311 or (202) 737-4404

Maryland

The MDE is designated as the agency unit responsible for the response to oil and hazardous substances for the state.

24-hour notification number is (866) 633-4686

Pennsylvania

The Commonwealth of Pennsylvania designates the Pennsylvania Department of Environmental Protection (PADEP), Environmental Emergency Response Program (EERP) as the agency unit responsible for the response to oil and hazardous substances in each of PADEP's six regional offices:

Region	Emergency Phone
Southeast	(484) 250-5900
Northeast	(570) 826-2511
Southcentral	(717) 705-4741 After Hours: (877) 333-1904
Northcentral	(570) 327-3636
Southwest	(412) 442-4000
Northwest	(814) 332-6945 After Hours: (800) 373-3398

Virginia

Virginia Department of Emergency Management (VDEM) and the VDEQ are the designated agency units responsible for the response to oil and hazardous substances.

VDEM and VDEQ 24-hour notification number is 1 (800) 468-8892

VDEQ regional offices serve as primary contacts for permitting, compliance, pollution, and enforcement response activities:

Region	Phone
Blue Ridge	(540) 562-6754
Northern	(703) 583-3850
Piedmont	(804) 698-4376
Southwest	(276) 676-4829
Tidewater	(757) 518-2010
Valley	(540) 574-7808

West Virginia

The West Virginia Department of Environmental Protection (WVDEP) is the designated agency unit responsible for the response to oil and hazardous substances within the boundaries of the state.

WVDEP 24-hour contact number is (800) 642-3074

SECTION 6: Related Plans and Programs

A. National Response System

The NRS is a mechanism routinely and effectively used to respond to a wide range of oil and hazardous substance releases. It is a multi-layered system involving individuals and teams from tribal, local, state, and federal agencies, as well as industry and other organizations. These groups share expertise and resources to ensure that response and cleanup activities are timely, efficient, and minimize threats to human health and the environment. For more information about the NRS, please visit the NRT website.

The NRF is another management system in the U.S. that provides structures and procedures to address incidents where federal support to local, state, tribal, territorial, and insular area governments is coordinated under the Robert T. Stafford Disaster Relief and Emergency Assistance Act (Stafford Act), as well as incidents where federal departments and agencies exercise other authorities and responsibilities.

Although the framework of the NRS is the same for responding to discharges of oil or releases of hazardous substances, the NCP establishes separate operational elements for responding to each type of incident, and these elements differ in some respects. The source of federal funding to carry out a response also differs (refer to Section 6 D for additional details).

B. Coordination with Other Federal Response Planning

The Presidential Policy Directive (PPD) 8: National Preparedness was released in March 2011 with the goal of strengthening the security and resilience of the United States through systematic preparation for the threats that pose the greatest risk to the security of the Nation. The National Planning Frameworks, which are part of the National Preparedness System (additional details provided at https://www.fema.gov/national-preparedness-system), set the strategy and doctrine for building, sustaining, and delivering the core capabilities identified in the National Preparedness Goal.

The frameworks describe the coordinating structures and alignment of key roles and responsibilities for the whole community and are integrated to ensure interoperability across all mission areas. The frameworks address the roles of individuals; nonprofit entities and nongovernmental organizations (NGOs); the private sector; communities; critical infrastructure; governments; and the Nation as a whole. These are all applicable to disaster response.

The NRF recognizes that federal responses to emergencies of different types may be led by various federal agencies under assorted federal authorities and regulations, including the NCP. The NCP serves as an operational supplement to the NRF and may be used in conjunction with, or independent from, the Stafford Act. In the event of a Stafford Act declaration, NRF Emergency Support Function (ESF) #10 – Oil and Hazardous Materials Response Annex may be activated to provide a coordinated federal response to actual or potential oil and hazardous materials incidents. ESF #10 responses are generally carried out in accordance with the NCP. It is important to understand that most federal responses to oil pollution incidents, including a Spill of National Significance (SONS), are carried out in accordance with the NCP. In rare cases, ESFs may also be activated for non-Stafford Act incidents and/or to support NCP responses that require an extraordinary level of federal resources.

PPD-8 defines five preparedness mission areas—Prevention, Protection, Mitigation, Response, and Recovery—and mandates the development of a series of policy and planning documents to explain and guide the Nation's approach for ensuring and enhancing national preparedness.

National Planning Frameworks

There is one Federal Interagency Operational Plan (FIOP) for each National Planning Framework which builds upon and describes how the government aligns resources and delivers corps capabilities. The FIOPs

describe the concept of operations for integrating and synchronizing existing national-level capabilities to support local, state, tribal, territorial, insular area, and federal plans, and are supported by federal department-level operational plans, where appropriate. More information can be found at: https://www.fema.gov/federal-interagency-operational-plans.

1. National Prevention Framework

The National Prevention Framework describes what the whole community—from community members to senior leaders in government—should do upon the discovery of an imminent threat to the homeland (focusing on preventing terrorism). An imminent threat is intelligence or operational information that warns of a credible, specific, and impending terrorist threat or ongoing attack against the U.S. This Framework helps achieve the National Preparedness Goal of a secure and resilient Nation that is optimally prepared to prevent an imminent terrorist attack within the U.S.

2. National Protection Framework

Describes what the whole community should do to safeguard against acts of terrorism, natural disasters, and other threats or hazards. The National Protection Framework describes the core capabilities; roles and responsibilities; and coordinating structures that facilitate the protection of individuals, communities, and the Nation. This Framework is focused on actions to protect against the greatest risks in a manner that allows American interests, aspirations, and way of life.

3. National Mitigation Framework

Covers the capabilities necessary to reduce the loss of life and property by lessening the impact of disasters. This Framework focuses on understanding the risks faced as well as empowering communities to strengthen their resilience and undertake actions that put communities in the best position to bounce back quickly and effectively when disasters occur. This focus on risk and resilience is why the National Mitigation Framework permeates all other areas of national preparedness, from prevention to recovery.

4. National Response Framework

The NRF covers the capabilities necessary to stabilize the situation. This focus is designed to save lives, protect property and the environment, and meet basic human needs after an incident has occurred. Response activities typically take place immediately before, during, and in the first few days after a major or catastrophic disaster. Recovery efforts then begin to help the community get back on its feet.

5. National Disaster Recovery Framework

The National Disaster Recovery Framework (NDRF) establishes a common platform and forum for how the whole community builds, sustains, and coordinates delivery of recovery capabilities. Recovery efforts focus on how best to restore, redevelop, and revitalize the health, social, economic, natural, and environmental fabric of the community and often begin while response is still occurring. The Framework also emphasizes pre-disaster and post-disaster planning.

C. Title III State and Local Emergency Response Plans

State Emergency Response Commission (SERC)

The Governor of each state has designated a State Emergency Response Commission (SERC) that is responsible for implementing the Emergency Planning and Community Right-to-Know Act (EPCRA) provisions within its state. The SERC's duties include:

- Establishing procedures for receiving and processing public requests for information collected under EPCRA;
- Reviewing local emergency response plans;
- Designating local emergency planning districts;

- Appointing a LEPC for each district; and
- Supervising the activities of the LEPC.

Local Emergency Planning Committees (LEPC)

Under the EPCRA, LEPCs must develop an emergency response plan, review the plan at least annually, and provide information about chemicals in the community to citizens. Plans are developed by LEPCs with stakeholder participation. The LEPC membership must include (at a minimum):

- Elected state and local officials;
- Police, fire, civil defense, and public health professionals;
- Environment, transportation, and hospital officials;
- Facility representatives; and
- Representatives from community groups and the media.

The required elements of a community emergency response plan include:

- Identification of facilities and transportation routes of extremely hazardous substances;
- Description of emergency response procedures, on- and off-site;
- Designation of a community coordinator and facility emergency coordinator(s) to implement the plan;
- Outline of emergency notification procedures;
- Description of how to determine the probable affected area and population by releases;
- Description of local emergency equipment and facilities and the persons responsible for them;
- Outline of evacuation plans;
- A training program for emergency responders (including schedules); and
- Methods and schedules for exercising emergency response plans.

Emergency Management Assistance Compact (EMAC)

The Emergency Management Assistance Compact (EMAC) is an all hazards – all disciplines mutual aid compact that allows states to join forces and establish a firm legal foundation for sharing resources between states.

EMAC offers assistance during governor-declared states of emergency or disaster that allows states to send personnel, equipment, and commodities to assist with response and recovery efforts in other states. Through EMAC states can also transfer services and conduct virtual missions.

The strength of EMAC and the quality that distinguishes it from other plans and compacts lie in its governance structure; its relationship with federal agencies, national organizations, states, counties, territories, and regions; the willingness of state and response and recovery personnel to deploy; and the ability to move any resource one state wishes to utilize to assist another state.

The National Guard

The National Guard can be deployed through EMAC in both State Active Duty (SAD) and Title 32 to assist member states. Many events trigger responses across multiple jurisdictions and different levels of government. The National Guard is the only U.S. military force that operates across both state and federal responses:

- **SAD** – The Governor can activate National Guard personnel to SAD in response to natural or man-made disasters or Homeland Defense missions.

- **Full-Time National Guard Duty (Title 32)** – Title 32 allows the Governor, with the approval of the President or the Secretary of Defense, to order a member to duty for operational Homeland Defense activities in accordance with U.S. Code; and
- **Active Duty (Title 10)** – means full-time duty in the active military service of the U.S. Title 10. Federal Law provides the Governor with the ability to place a soldier in a full-time duty status under the command and control of the state but is directly funded with federal dollars. It also allows the President to "federalize" the National Guard forces by ordering them to active duty in their reserve component status or by calling them into federal service in their militia status.

The geographically disperse forces of the National Guard maintain links to local communities and ties to state and local governments. These relationships allow for rapid and integrated responses in times of emergency.

Weapons of Mass Destruction Civil Support Team (WMD-CST or CST)

A Weapons of Mass Destruction Civil Support Team (WMD-CST or CST) supports civil authorities in the event of the use, or threatened use, of a weapon of mass destruction. CSTs are federally funded units established under Presidential Decision Directive 39. There is one National Guard CST for each commonwealth/state in the region, including Washington, D.C. These support teams regularly interact with the RRT3.

D. Reimbursement for Services

Oil and/or hazardous substances incidents may range considerably in size and magnitude of the impact upon public health and the environment. They may range from minor incidents such as clandestine dumping of intact drums of oil or hazardous substances, to more severe incidents such as transportation accidents involving large amounts of oil or hazardous substances and fires at chemical facilities, or to catastrophic incidents such as a large-scale oil spill or hazardous materials release, including those caused by terrorist attacks or criminal acts of sabotage.

Response Under The NCP

The NCP is authorized by the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA), Section 311 of the Clean Water Act (CWA), and the Oil Pollution Act of 1990 (OPA). The NCP provides an organizational structure and procedures for preparing for and responding to discharges and substantial threats of discharges of oil and releases; and substantial threats of releases of hazardous substances, pollutants, and contaminants.

These regulations have been revised several times, including in response to CERCLA and to the Oil Pollution Act of 1990.

Response Under The NRF

Whenever a disaster (either natural or manmade) occurs and harms or threatens a community or the natural environment, federal, state, local, and private emergency resources respond. DHS developed the NRF to structure the way responders work together and to provide supporting mechanisms for disasters so serious the Secretary of Homeland Security declares them to be Incidents of National Significance. The NRF is the comprehensive response plan for all hazards within the U.S.

Mission Assignments (MAs)

Activation under the NRF is provided under the authorities of the Stafford Act. The MA is issued by FEMA to direct other federal agencies and components of DHS to complete specified tasks in response to a Stafford Act event under the NRF. MAs are provided in anticipation of, or in response to, a Presidential declaration. Agencies can be directed to perform work under MAs, with or without reimbursement in accordance with

the Stafford Act. Each MA identifies the statement of work, fund citation, points of contact, projected completion "end" date, state cost share information, MA type, and authorized funding amount.

Intra-Agency Agreements

When a federal entity with primary responsibility and authority for handling an incident requires federal assistance above and beyond its interagency mechanisms (e.g., Executive orders, MOUs, MOAs, etc.), that department or agency can request additional federal assistance through DHS. Federal agencies participating in the NRF may request and provide federal-to-federal support by executing inter/intra-agency reimbursable agreements, in accordance with applicable authorities. Federal agencies providing mutual aid support may request reimbursement from the requesting agency for eligible expenditures.

NOTE: Pollution incidents that are not declared Incidents of National Significance or Stafford Act Disasters or Emergencies continue to fall under the NCP.

Cost Reimbursement

Established Trust Funds

There are several ways for federal agencies to obtain cost reimbursement for activities provided during an incident response. Congress has established two dedicated trust funds to finance the costs of a federal response to a discharge or oil or release of a hazardous substance, pollutant, or contaminant.

1. **OSLTF** – the USCG administers the OSLTF to finance the costs of responding to a discharge of oil. Currently, revenues for the OSTLF primarily are derived from a dedicated per-barrel tax on domestic and imported oil. OPA delineated fund uses include:

   - Removal costs incurred by the USCG and USEPA;
   - State access for removal activities;
   - Payments to federal, state, and Indian tribe trustees to conduct NRDAs and restorations;
   - Payment of claims for uncompensated removal costs and damages;
   - Research and development; and
   - Other specific appropriations.

   Refer to the NPFC website on how to submit a claim recover costs and damages under the OSTLF: https://www.uscg.mil/Mariners/National-Pollution-Funds-Center/Claims/

2. **Hazardous Substance Superfund Trust Fund** – USEPA administers the Hazardous Substance Superfund Trust Fund to finance the costs of responding to a release of a hazardous substance, pollutant, or contaminant. This Fund is financed mostly with revenues transferred from the General Fund of the U.S. Treasury, since the taxes on domestic and imported oil, chemical feed stocks, and corporate income that once financed this trust fund expired at the end of 1995.

These two trust funds differ in terms of how the monies are made available to carry out a response. In general, reimbursement from either fund requires extensive documentation of costs and services for the response which are consistent with the NCP. Monies spent from these trust funds may be recouped from the RPs under the liability provisions of the OPA and CERCLA, respectively. The USCG NPFC was commissioned to administer both funds. More information about cost reimbursement for the funds can be obtained from: https://www.uscg.mil/Mariners/National-Pollution-Funds-Center/.

Pollution Removal Funding Authorization (PRFA):

The PRFA is a tool available to FOSCs to quickly obtain needed services and assistance from other government agencies: federal, state, or local, as well as recognized Indian Tribes in oil spill and hazardous materials response actions. The PRFA commits the OSLTF to payment by reimbursement of costs incurred in pollution response activities undertaken by state and local agencies and other federal agencies under the

direct supervision of an FOSC. In such situations, the FOSC issues a PRFA to the requesting agency to establish a contractual relationship and obligate the fund. There are significant cost tracking and documentation requirements under a PRFA. Federal trustees have an alternate source of funding to help with the costs associated with initiation of NRDAs related to oil discharges (see OSLTF discussion above).

Stafford Act Funds

Another mechanism for funding a response includes funds provided under the Robert T. Stafford Disaster Relief and Emergency Assistance Act (the Stafford Act). Under a presidential declaration of an incident as a major disaster or emergency, the Stafford Act funds may also be used to finance the federal response costs, rather than the trust funds. The use of Stafford Act funds to pay for the federal response to a discharge of oil or a release of a hazardous substance has been limited to discharges or releases caused by natural disasters or other emergencies for which there is not a RP to pursue. In such instances, the President may make a Stafford Act declaration to provide federal assistance to augment state and local resources, in the absence of viable RPs to pay for the response.

Comparison of Pollution Incidents and Funding Source

The table below compares (and simplifies) the different types of pollution incidents (from https://www.uscg.mil/Mariners/National-Pollution-Funds-Center/About-NPFC/NRF-Disaster-Funding/).

Type of Pollution Incident	Who Declares	Plan	Funding
Most Spills	N/A	NCP	OSLTF (oil) Superfund (HAZMAT)
Spill of National Significance (SONS)	USEPA Administrator (inland zone spills) USCG Commandant (coastal zone spills)	NCP	OSLTF (oil) Superfund (HAZMAT)
Incident of National Significance (IONS)	Secretary of DHS	Usually ESF #10 of the NRF	Stafford Act Disaster Funding
		Occasionally, Oil & HAZMAT Incident Annex of NRF (Basically NCP)	OSLTF (oil) Superfund (HAZMAT)
Stafford Act Disaster/Emergency	President	Almost Always ESF #10 of the NRF	Stafford Act Disaster Funding

SECTION 7: Abbreviations and Acronyms

ACP	Area Contingency Plan
ARPA	Archaeological Resources Protection Act
ARTES	Alterative Response Tool Evaluation System
ATSDR	Agency for Toxic Substances and Disease Registry
bbl	barrel
BIA	Bureau of Indian Affairs
BLM	Bureau of Land Management
BOA	Basic Ordering Agreement
BOEM	Bureau of Ocean Energy Management
BSEE	Bureau of Safety and Environmental Enforcement
CBRN CMAD	Chemical, Biological, Radiological, and Nuclear Consequence Management Advisory Division
CDC	Centers for Disease Control and Prevention
CERCLA	Comprehensive Environmental Response, Compensation, and Liability Act
CFR	Code of Federal Regulations
CISMT	Critical Incident Stress Management Team
CNRDA	Consultation, Natural Resources, and Damage Assessment
COTP	Captain of the Port
CST	Civil Support Team
CWA	Clean Water Act
DC	District of Columbia
DE	Delaware
DE DNREC	Delaware Department of Natural Resources and Environmental Control
DEEP	Dispersant Employment Evaluation Plan
DEMA	Delaware Emergency Management Agency
DHHS	U.S. Department of Health and Human Services
DHS	Department of Homeland Security
DOC	U.S. Department of Commerce
DoD	U.S. Department of Defense
DOE	U.S. Department of Energy

DOEE	Department of Energy and Environment
DOI	U.S. Department of the Interior
DOJ	U.S. Department of Justice
DOL	U.S. Department of Labor
DOT	U.S. Department of Transportation
EERP	Environmental Emergency Response Program
EEZ	Exclusive Economic Zone
EFH	Essential Fish Habitat
EMAC	Emergency Management Assistance Compact
EPCRA	Emergency Planning and Community Right-to-Know Act
ERRS	Emergency Response and Rapid Remediation Services
ERT	Environmental Response Team
ESA	Endangered Species Act
ESF	Emergency Support Function
FAA	Federal Aviation Administration
FEMA	Federal Emergency Management Agency
FIOP	Federal Interagency Operational Plan
FOSC	Federal On-Scene Coordinator
FTA	Federal Transit Administration
GIS	geographic information system
GSA	General Services Administration
HCL	Hydrochloric acid
HSEMA	Homeland Security and Emergency Management Agency
HUD	U.S. Department of Housing and Urban Development
ICS	Incident Command System
IMO	Information Management and Outreach
IONS	Incident of National Significance
ISB	*in situ* burn
JIC	Joint Information Center
LEPC	Local Emergency Planning Committee
LFA	lead federal agency

MARAD	Maritime Administration
MD	Maryland
MDE	Maryland Department of Environment
MER	Marine Environmental Response
MOA	Memorandum of Agreement
MOU	Memorandum of Understanding
MPD	Metropolitan Police Department
MSU	Marine Safety Units
NAGPRA	Native American Graves Protection and Repatriation Act
NCP	National Oil and Hazardous Substances Pollution Contingency Plan
NCERT	National Criminal Enforcement Response Team
NDRF	National Disaster Recovery Framework
NGO	non-governmental organization
NHPA	National Historic Preservation Act
NIEHS	National Institutes for Environmental Health Sciences
NIH	National Institute of Health
NIOSH	National Institute for Occupational Safety and Health
NIMS	National Incident Management System
NM	nautical miles
NMFS	National Marine Fisheries Service
NOAA	National Oceanic and Atmospheric Administration
NPFC	National Pollution Funds Center
NPS	National Park Service
NRC	National Response Center
NRDA	Natural Resource Damage Assessment
NRDAR	Natural Resource Damage Assessment and Restoration
NRF	National Response Framework
NRM	no regional modification
NRS	National Response System
NRT	National Response Team
NSF	National Strike Force

OEE	Office of Environment and Energy
OPA	Oil Pollution Act of 1990
OR&R	Office of Response and Restoration
OSC	On-Scene Coordinator
OSHA	Occupational Safety and Health Administration
OSLTF	Oil Spill Liability Trust Fund
PA	Pennsylvania
PADEP	Pennsylvania Department of Environmental Protection
PHMSA	Pipeline and Hazardous Materials Safety Administration
PIAT	Public Information Assist Team
POC	point of contact
POLREP	Pollution Report
PPD	Presidential Policy Directive
PREP	Preparedness for Response Exercise Program
PRFA	Pollution Removal Funding Authorization
R3RCP	Region III Regional Oil and Hazardous Substances Pollution Contingency Plan
RCP	Regional Contingency Plan
RERT	Radiological Emergency Response Team
RP	responsible party
RPM	Remedial Project Manager
RRC	Regional Response Center
RRT	Regional Response Team
RRT3	Region III Regional Response Team
RSC	Response Support Corps
RSIAS	Remote Sensing Imagery Analysis Service
SAD	State Active Duty
SCAT	Shoreline Cleanup and Assessment Technique
SERC	State Emergency Response Commission
SHPO	State Historic Preservation Officer
SMART	Special Monitoring of Advanced Response Technologies
SMOA	Superfund Memorandum of Agreement

SONS	Spill of National Significance
SRC	Spill Response Countermeasures
SSC	Scientific Support Coordinator
START	Superfund Technical Assessment and Response Team
SUPSALV	Supervisor of Salvage
SWA	surface washing agents
TDAT	Tribal Directory Assessment Tool
THPO	Tribal Historic Preservation Officer
U.S.	United States
UAC	Unified Area Command
UC	Unified Command
UCS	Unified Command System
USACE	U.S. Army Corps of Engineers
USCG	U.S. Coast Guard
USDA	U.S. Department of Agriculture
USEPA	U.S. Environmental Protection Agency

VDEM	Virginia Department of Emergency Management
VDEQ	Virginia Department of Environmental Quality
WMD	weapons of mass destruction
WV	West Virginia
WVDEP	West Virginia Department of Environmental Protection

APPENDICES LIST

Appendix 1 Region III Regional Response Team (RRT3) Primary Contacts List

Appendix 2 Cross Reference Matrix for R3RCP - NCP

Appendix 3 Executive Orders, MOAs, MOUs

Appendix 3-A: Executive Orders

- Appendix 3-A1 EO 12580 Superfund Implementation (January 1987), as amended 13016 (August 1996) and 13286 (March 2003)
- Appendix 3-A2 EO 12777 Implementation of Section 311 of FWPCA and OPA (October 1991), as amended 13286 (March 2003) and 13638 (March 2013)
- Appendix 3-A3 EO 13650 Improving chemical Facility Safety and Security (August 2013)

Appendix 3-B: Cross boundary Support MOAs

- Appendix 3-B1 MOA USEPA Regions 2 & 3 (November 2006)
- Appendix 3-B2 MOA USEPA Regions 3, 4, & 5 (April 2000)
- Appendix 3-C: 1997 Interagency Agreement on ESA
- Appendix 3-D: MOU for Use of Volunteers (January 2011)

Appendix 4 Jurisdictional Boundaries for USCG Coastal / USEPA Inland Zones

- Appendix 4-A: MOA between USCG District 5 / USEPA Region III Response Jurisdiction Boundary (January 2010)
- Appendix 4-B: MOA between USCG District 8 / USEPA Region III Response Jurisdiction Boundary (September 2016)
- Appendix 4-C: Resources for USCG/USEPA Coastal and Inland Zone Jurisdictional Boundaries

Appendix 5 Instrument of Re-delegation between USCG and USEPA (signed 29 November 1987 and 27 May 1988)

Appendix 6 Preauthorization Documents

- Appendix 6.0: MOU for Preauthorization for the use of Chemical Countermeasures by the FOSC (January 1997)
  - MOU Annex I Preauthorization Zones and Zone-Specific Conditions
  - MOU Annex II Critical Decision Making
  - MOU Annex III Trial Use Policy
  - MOU Annex IV Dispersant Monitoring Protocol
  - MOU Annex V Products with Completed Section 7 Consultation
  - MOU Annex VI Biological Monitoring/Region 5 Bioassay Protocol
- Appendix 6.1: USFWS ESA Section 7 Determination Letter for Chemical Countermeasures (January 1997)

Appendix 6-A: Dispersants

- Appendix 6-A1: Update for Dispersant MOU Annexes I, II, and III (January 1999)
- Appendix 6-A2: Dispersants Employment Evaluation Plan (DEEP) (May 1991)
  - Dispersant Use Decision Guidelines & Checklist

  - Criteria for Monitoring Dispersant Use
    Special Monitoring of Applied Response Techniques (SMART) –Located in Appendix 8 of this RCP document
- Appendix 6-B: In Situ Burn (September 1997)
  - MOU Appendix I Response Decision Matrix for ISB
  - MOU Appendix II ISB Evaluation & Response Checklist
  - MOU Appendix III In-Situ Burn Monitoring Plan
    Special Monitoring of Applied Response Techniques (SMART) –Located in Appendix 8 of this RCP document
- Appendix 6-B1: USFWS ESA Section 7 Determination Letter for ISB (September 1997)
- Appendix 6-C: Solidifier: CIAgent (January 2007)
- Appendix 6-C1: Preauthorization & Section 7 Determination Letter for CIAgent (May 2007)

Appendix 7 Response Policy Guidance

- Appendix 7-A: Bioremediation Policy
- Appendix 7-A1: Bioremediation Policy (July 1999)
- Appendix 7-A2: Bioremediation Guidance & Decision Tool (February 2004)
- Appendix 7-B: Elasticity Modifiers (DRAFT) [Reserved]
- Appendix 7-C: Emulsion Treating Agents [Reserved]
- Appendix 7-D: Herding Agents (Surface Collecting Agents) [Reserved]
- Appendix 7-E: In Situ Burn for Ocean, Coastal Areas and Inland Zones (March 2003)
- Appendix 7-F: In Situ Burn for Oil Impacted Herbaceous Wetlands (2004)
- Appendix 7-G: Shoreline Pre-Treatment Agents [Reserved]
- Appendix 7-H: Solidifiers [refer to Appendices 6 and 6-C; Reserved]
- Appendix 7-I: Surface Washing Agents [Reserved]
- Appendix 7-J: Ohio River Valley Umbrella (September 2015)
- Appendix 7-K: Places of Refuge (NRT, July 2007)
  Appendix 7-L: RRT3 Specific Response Policies
- Appendix 7-L1: Limited Jones Act (May2002)
- Appendix 7-L2: Natural Trustee Resources [Reserved]
- Appendix 7-L3: Disposal of Contact Water (May 2002)
- Appendix 7-L4: Ocean Dumping (May 2002)
- Appendix 7-L5: Non-Floating Oil [Reserved]
- Appendix 7-L6: Vessel Decontamination [Reserved]
- Appendix 7-L7: NRT Use of Volunteers (September 2012)
- Appendix 7-L8: Photo-documentation [Reserved]
- Appendix 7-L9: Coordination with Tribal Officials [Reserved]

Appendix 8 Monitoring & Evaluation Tools

- Appendix 8-A: Special Monitoring of Applied Response Techniques (SMART) (August 2006)
- Appendix 8-B: NRT Monitoring for Atypical Dispersant Operations (May 2013)

Appendix 8-C: Selection Guide

- Appendix 8-C1: Volume 1 of the Selection Guide for Oil Spill Response Countermeasures – Decision Making (June 2009)
- Appendix 8-C2: Volume 2 of the Selection Guide for Oil Spill Applied Technologies – Operations Plans (June 2000)
- Appendix 8-D: Other Product/Category-Specific [Reserved]

Appendix 9 Consultation Requirements and References

- Appendix 9-A: Inter-agency MOA for Oil Spill Planning and Response under NCP and ESA (2001)
- Appendix 9-A1: MOA for ESA Guidebook (2002)
- Appendix 9-A2: MER Policy Letter 01-14 for ESA Section 7 and EFH Consultation Process Guidance (October 2013)
- Appendix 9-A3: Best Practices for Migratory Bird Care During Oil Spill Response (2003)
- Appendix 9-A4: RRT3 ESA Spill Response Screening Matrices for Coastal and Inland Areas (dynamic document)
- Appendix 9-B: Essential Fish Habitat (EFH) Consultation Guidance (April 2004)
- Appendix 9-C: Programmatic Agreement for Protection of Historic Properties during Federal Emergency Response (April 2002)

Appendix 9-D: Tribal Consultation

- Appendix 9-D1: EO 13007 Indian Sacred Sites (May 1996)
- Appendix 9-D2: Guidance for Implementing EO 13175 (July 2010)
- Appendix 9-D3: EPA Policy to Consult with Indian Tribes (May 2011)
- Appendix 9-D4: Section 106 Consultation with Indian Tribes Guidebook (December 2012)
- Appendix 9-D5: Role of the Tribal Historic Preservation Officer in the Section 106 Process (November 2013)
- Appendix 9-D6: Government-to-Government Consultation with Federally Recognized Indian Tribes and Alaska Native Corporations (November 2013)
- Appendix 9-E: RRT3 NAGPRA Plan of Action Checklist [Reserved]
- Appendix 9-F: USACE Nationwide Permit (NWP)-20 (December 2017) [Reserved]

Appendix 10 National Resource Damage Assessment (NRDA) [Reserved]

Appendix 11 (DRAFT) Incident-Specific Region III Regional Response Team III Activation Quick Response Guide [Reserved]

APPENDIX 1: Region III Regional Response Team (RRT3) Primary Contact List

Appendix 1 is provided at the RRT3 Regional Contingency Plan (RCP) webpage:
https://www.nrt.org/RRT3_RCP

APPENDIX 2: Cross Reference Matrix for R3RCP - NCP

40 CFR PART 300			
National Oil and Hazardous Substances Pollution Contingency Plan		**Regional Modifications**	**Location**
Subpart A - Introduction			
300.1	Purpose and objectives	The RCP limited to Region III	Sec. 1
300.2	Authority and applicability	No Regional modifications	See NCP
300.3	Scope	The RCP limited to Region III	Sec. 1
300.4	Abbreviations	NCP and region-specific abbreviations included to facilitate use	Sec. 7
300.5	Definitions	No Regional modifications	See NCP
300.6	Use of number and gender	No Regional modifications	See NCP
300.7	Computation of time	No Regional modifications	See NCP
Subpart B – Responsibility and Organization for Response			
300.100	Duties of the President delegated to federal agencies	No Regional modifications	See NCP
300.105	General organizational concepts	No Regional modifications	See NCP
300.110	NRT	No Regional modifications	See NCP
300.115	Regional Response Team	A description of Region III RRT operations and administration is included.	Sec. 4
300.120	On-scene coordinators and remedial project managers: general responsibilities	No Regional modifications	See NCP
300.125	Notification and communications	No Regional modifications	Sec. 4
300.130	Determinations to initiate response and special conditions	A description of the different emergency response plans that apply to oil and hazardous substances incidents is included	Sec. 4 and 6
300.135	Response operations	The RRT follows guidance set forth in the NRT ICS / UC Guidance document	Sec. 1-D
300.140	Multi-regional responses	Region-specific geographic information included	Sec. 3
300.145	Special teams and other assistance available to FOSCs / RPMs	No Regional modifications	See NCP
300.150	Worker health and safety	No Regional modifications	See NCP
300.155	Public information and community relations	The RRTs public information and community relations procedures follow the NRT JIC Model. The NRT JIC model guidance document can be found on the NRT website	Sec, 4-B
300.160	Documentation and cost recovery	No Regional modifications	See NCP

40 CFR PART 300			
National Oil and Hazardous Substances Pollution Contingency Plan		**Regional Modifications**	**Location**
Subpart B – Responsibility and Organization for Response (continued)			
300.165	FOSC reports	Information regarding when FOSC Reports are completed is included. Information regarding the format of FOSC Reports is in the ACP.	Sec. 4
300.170	Federal agency participation	No Regional modifications	See NCP
300.175	Federal agencies: additional responsibilities and assistance	Regional offices have more clearly defined their roles and capabilities	Sec. 5 and Agency / State Fact Sheets
300.180	State and local participation in response	Tribal and state information is specific to Region III	Sec. 5
300.185	Nongovernmental participation	No Regional modifications	See NCP
Subpart C – Planning and Preparedness			
300.200	General	No Regional modifications	See NCP
300.205	Planning and coordination structure	An overview and information on SERCs and LEPCs are included.	Sec. 6
300.210	Federal contingency plans	A description of the different emergency response plans that apply to oil and hazardous substances incidents is included.	Sec. 6
300.211	OPA vessel and facility response plans	No Regional modifications	See NCP
300.212	Area response drills	No Regional modifications	See NCP
300.215	Title III local emergency response plans	Information on SERCs and LEPCs within Region III are included.	Sec. 6
300.220	Related Title III issues	No Regional modifications	See NCP
Subpart D – Operational Response Phases for Oil Removal			
300.300	Phase I – Discovery and Notification	No Regional modifications	See NCP
300.305	Phase II – Preliminary assessment and initiation of action	No Regional modifications	See NCP
300.310	Phase III – Containment countermeasures, cleanup, and disposal	No Regional modifications	See NCP
300.315	Phase IV – Documentation and cost recovery	No Regional modifications	See NCP
300.317	National response priorities	No Regional modifications	See NCP
300.320	General pattern of response	No Regional modifications	See NCP
Subpart D – Operational Response Phases for Oil Removal (continued)			
300.322	Response to substantial threats to the public health or welfare of the United States	No Regional modifications	See NCP

40 CFR PART 300			
National Oil and Hazardous Substances Pollution Contingency Plan		**Regional Modifications**	**Location**
300.323	Spills of National Significance	No Regional modifications	See NCP
300.324	Response to Worst Case Discharges	No Regional modifications	See NCP
300.330	Wildlife Conservation	This is covered by a national MOA between the federal natural resource trustees and Federal response agencies	Sec. 3 and App. 3-C
300.335	Funding	No Regional modifications	See NCP
Subpart E – Hazardous Substance Response			
300.400	General	No Regional modifications	See NCP
300.405	Discovery or notification	No Regional modifications	See NCP
300.410	Removal site evaluation	No Regional modifications	See NCP
300.415	Removal action	No Regional modifications	See NCP
300.420	Remedial site evaluation	No Regional modifications	See NCP
300.425	Establishing remedial priorities	No Regional modifications	See NCP
300.430	Remedial investigation/feasibility study and selection of remedy	No Regional modifications	See NCP
300.435	Remedial design/remedial action, operation, and maintenance	No Regional modifications	See NCP
300.440	Procedures for planning and implementing off-site response actions	No Regional modifications	See NCP
Subpart F – Hazardous Substance Response			
300.500	General	No Regional modifications	See NCP
300.505	USEPA/State Superfund Memorandum of Agreement (SMOA)	No SMOAs between USEPA and states in Region III have been signed that pertain to emergency response or removal activities. Region III SMOAs apply only to remedial work sites listed on the National Priorities List and are therefore outside the scope of this plan.	Not applicable
300.510	State assurances	No Regional modifications	See NCP
300.515	Requirements for state involvement in remedial enforcement response	No Regional modifications	See NCP
300.520	State involvement in USEPA-led enforcement negotiations	No Regional modifications	See NCP
300.525	State involvement in removal actions	No Regional modifications	See NCP
Subpart G – Trustees for Natural Resources			
300.600	Designation of federal trustees	Specific geographic areas entrusted to various agencies are listed in the ACPs.	See ACPs and IACP
300.605	State trustees	State Trustees are specific to Region III.	Sec. 5

40 CFR PART 300			
National Oil and Hazardous Substances Pollution Contingency Plan		**Regional Modifications**	**Location**
300.610	Indian Tribes	Tribal Trustees are specific to Region III	Sec. 5
300.612	Foreign trustees	Not applicable	
300.615	Responsibilities of Trustees	Region III RRT policy with regard to environmentally sensitive areas is guided by a national MOA between federal natural resource trustees and federal response agencies	Sec. 3
Subpart H – Participation by Other Persons			
300.700	Activities by other persons	No Regional modifications	See NCP
Subpart I – Administrative Record for Selection of Response Action			
300.800	Establishment of an administrative record	No Regional modifications	See NCP
300.805	Location of the administrative record file	No Regional modifications	See NCP
300.810	Contents of the administrative record file	No Regional modifications	See NCP
300.815	Administrative record file for a remedial action	No Regional modifications	See NCP
300.820	Administrative record for a removal action	No Regional modifications	See NCP
300.825	Record requirement after the decision document is signed	No Regional modifications	See NCP
Subpart J – Use of Dispersants and Other Chemicals			
300.900	General	No Regional modifications	See NCP
300.905	NCP Product Schedule	No Regional modifications	See NCP
300.910	Authorization of use	The state of Region III, USEPA, and USCG have instituted preauthorization plans and MOUs that dictate RRT3 policy on the use of chemical countermeasures and *in situ* burning	App. 3 and 6
300.915	Data requirements	No Regional modifications	See NCP
300.920	Addition of products schedule	No Regional modifications	See NCP
Subpart K – Federal Facilities [Reserved]			
Subpart L – Involuntary Acquisition of Property by the Government			
300.1105	Involuntary Acquisition of Property by Government	No Regional modifications	See NCP

APPENDIX 3: Executive Orders, MOAs, MOUs

Appendices are provided at the RRT3 Regional Contingency Plan (RCP) webpage:
https://www.nrt.org/RRT3_RCP

Appendix 3-A	Executive Orders
Appendix 3-A1	EO 12580 Superfund Implementation (January 1987), as amended 13016 (August 1996) and 13286 (March 2003)
Appendix 3-A2	EO 12777 Implementation of Section 311 of FWPCA and OPA (October 1991), as amended 13286 (March 2003) and 13638 (March 2013)
Appendix 3-A3	EO 13650 Improving chemical Facility Safety and Security (August 2013)
Appendix 3-B	Cross Boundary Support MOAs
Appendix 3-B1	MOA USEPA Regions 2 & 3 (November 2006)
Appendix 3-B2	MOA USEPA Regions 3, 4, & 5 (April 2000)
Appendix 3-C	1997 Interagency Agreement on ESA
Appendix 3-D	MOU for Use of Volunteers (January 2011)

APPENDIX 4: Jurisdictional Boundaries for USCG Coastal / USEPA Inland Zones

Appendices are provided at the RRT3 Regional Contingency Plan (RCP) webpage:
https://www.nrt.org/RRT3_RCP

Appendix 4-A: MOA Between USCG District 5 / USEPA Region III Response Jurisdiction Boundary (January 2010)

Appendix 4-B: MOA Between USCG District 8 / USEPA Region III Response Jurisdiction Boundary (September 2016)

Appendix 4-C: Resources for Jurisdictional Boundary Maps

APPENDIX 4-C: Resources for USCG / USEPA Coastal and Inland Zone Jurisdictional Boundaries

Jurisdictional Boundary Maps between USCG Coastal and USEPA Inland Zones can be found at two locations:

1. NOAA's Environmental Response Management Application (ERMA)

For general information on the ERMA online mapping tool and to access the ERMA User Guide, visit: https://response.restoration.noaa.gov/resources/maps-and-spatial-data/environmental-response-management-application-erma

To access the Atlantic ERMA for Region III: https://response.restoration.noaa.gov/atlantic-erma

- Expand "Admin Boundaries & Reference Features"
- Expand "Federal Agency Regions & Offices"
  - ✓ Check "EPA Region Boundaries" to see EPA Region III Boundaries
  - ✓ Check "EPA/USCG Region 5 DE, MD, VA Jurisdictional Boundary (USCG)" to see where USCG Coastal and EPA Inland boundaries are located in DE, MD, and VA
  - ✓ Check "USCG Captain of the Port Zones" or "USCG Sectors" to see where USCG Sectors are located in Region III.
  - ✓ NOTE: The jurisdictional boundaries or area of responsibility (AOR) for USCG District 9 is not shown in Region III (in the Great Lakes Area on ERMA). Also, the jurisdictional responsibility where USCG District 8 overlaps with Region III lies with EPA on the navigable rivers.

2. USEPA's Region 3 OSC Planning Dashboard

The IACP Viewer is accessed through the Dashboard: https://www.eparm.net/R3IACP/Default.aspx

- Access to the Viewer requires a login, which can be requested on the main page by clicking on [Register for Access] in the upper right corner of the screen.
- Once you have a Login and Password, click on the button below the map on the Home page labeled "Open IACP Viewer in new window"
- Expand the "Boundaries" folder under Layers
  - ✓ Check Boundaries – Region 3
  - ✓ Check USEPA/USCG AOR Boundary
    NOTE: In addition to the USCG AOR for District 5 in DE, MD, and VA, this map will also show the USCG AOR for USCG District 9 on Lake Erie.

APPENDIX 5: Instrument of Redelegation Between USCG and USEPA (November 1987)

(Signed 29 November 1987 and 27 May 1988)

Appendices are provided at the RRT3 Regional Contingency Plan (RCP) webpage:
https://www.nrt.org/RRT3_RCP

APPENDIX 6: Preauthorization Documents

Appendices are provided at the RRT3 Regional Contingency Plan (RCP) webpage:
https://www.nrt.org/RRT3_RCP

Appendix 6.0 MOU for Preauthorization for the use of Chemical Countermeasures by the FOSC (January 1997)

- MOU Annex I Preauthorization Zones and Zone-Specific Conditions
- MOU Annex II Critical Decision Making
- MOU Annex III Trial Use Policy
- MOU Annex IV Dispersant Monitoring Protocol
- MOU Annex V Products with Completed Section 7 Consultation
- MOU Annex VI Biological Monitoring/Region 5 Bioassay Protocol

Appendix 6.1 USFWS ESA Section 7 Determination Letter for Chemical Countermeasures (January 1997)

Appendix 6-A Dispersants

Appendix 6-A1 Update for Dispersant MOU Annexes I, II, and III (January 1999)

Appendix 6-A2: Dispersants Employment Evaluation Plan (DEEP) (May 1991)

- Dispersant Use Decision Guidelines & Checklist
- Criteria for Monitoring Dispersant Use
- Special Monitoring of Applied Response Techniques (SMART) –Located in Appendix 8 of this RCP document

Appendix 6-B In Situ Burn (September 1997)

- MOU Appendix I Response Decision Matrix for ISB
- MOU Appendix II ISB Evaluation & Response Checklist
- MOU Appendix III In Situ Burn Monitoring Plan

Appendix 6-B1 USFWS ESA Section 7 Determination Letter for ISB (September 1997)

Special Monitoring of Applied Response Techniques (SMART) –Located in Appendix 8 of this RCP document

Appendix 6-C Solidifier: CIAgent (January 2007)

Appendix 6-C1 Preauthorization & Section 7 Determination Letter for CIAgent (May 2007)

APPENDIX 7: Response Policy Guidance

Appendices are provided at the RRT3 Regional Contingency Plan (RCP) webpage:
https://www.nrt.org/RRT3_RCP

Appendix 7-A: Bioremediation Policy

Appendix 7-A1: Bioremediation Policy (July 1999)

Appendix 7-A2: Bioremediation Guidance & Decision Tool (February 2004)

Appendix 7-B: Elasticity Modifiers (DRAFT) [Reserved]

Appendix 7-C: Emulsion Treating Agents [Reserved]

Appendix 7-D: Herding Agents (Surface Collecting Agents) [Reserved]

Appendix 7-E: *In Situ* Burn for Ocean, Coastal Areas and Inland Zones (March 2003)

Appendix 7-F: *In Situ* Burn for Oil Impacted Herbaceous Wetlands (2004)

Appendix 7-G: Shoreline Pre-treatment Agents [Reserved]

Appendix 7-H: Solidifiers [refer to Appendices 6 and 6-C, Reserved]

Appendix 7-I: Surface Washing Agents [Reserved]

Appendix 7-J: Ohio Valley Umbrella (September 2015)

Appendix 7-K: Places of Refuge (NRT, July 2007)

Appendix 7-L: RRT3 Specific Response Policies

Appendix 7-L1: Limited Jones Act (May2002)

Appendix 7-L2: Natural Trustee Resources [Reserved]

Appendix 7-L3: Disposal of Contact Water (May 2002)

Appendix 7-L4: Ocean Dumping (May 2002)

Appendix 7-L5: Non-Floating Oil [Reserved]

Appendix 7-L6: Vessel Decontamination [Reserved]

Appendix 7-L7: NRT Use of Volunteers (September 2012)

Appendix 7-L8: Photo-documentation [Reserved]

Appendix 7-L9: Coordination with Tribal Officials [Reserved]

APPENDIX 8: Monitoring and Evaluation Tools

Appendices are provided at the RRT3 Regional Contingency Plan (RCP) webpage:
https://www.nrt.org/RRT3_RCP

Appendix 8-A	Special Monitoring of Advanced Response Technologies (SMART) (August 2006)
Appendix 8-B	NRT Monitoring for Atypical Dispersant Operations (May 2013)
Appendix 8-C	Selection Guide
Appendix 8-C1	Volume 1 of the Selection Guide for Oil Spill Response Countermeasures – Decision Making (June 2009)
Appendix 8-C2	Volume 2 of the Selection Guide for Oil Spill Applied Technologies – Operations Plans (June 2000)
Appendix 8-D	Other Product/Category-Specific [Reserved]

APPENDIX 9: Consultation Requirements and References

Appendices are provided at the RRT3 Regional Contingency Plan (RCP) webpage:
https://www.nrt.org/RRT3_RCP

Appendix 9-A	ESA and Critical Habitats
Appendix 9-A1	MOA Training Manual for ESA (2002)
Appendix 9-A2	MER Policy Letter 01-14 (October 2013)
Appendix 9-A3	Best Practices for Migratory Bird Care During Oil Spill Response (2003)
Appendix 9-A4	RRT3 ESA Spill Response Screening Matrices for Coastal and Inland Areas (dynamic document)
Appendix 9-B:	Essential Fish Habitat (EFH) Consultation Guidance (April 2004)
Appendix 9-C:	Programmatic Agreement for Protection of Historic Properties during Federal Emergency Response (August 1998)
Appendix 9-D:	Tribal Consultation
Appendix 9-D1	EO 13007 Indian Sacred Sites (May 1996)
Appendix 9-D2	Guidance for Implementing E.O. 13175 (July 2010)
Appendix 9-D3	Policy to Consult with Indian Tribes (May 2011)
Appendix 9-D4	Section 106 Consultation Guidebook (December 2012)
Appendix 9-D5	Role of the Tribal Historic Preservation Officer in the Section 106 Process (November 2013)
Appendix 9-D6	Government-to-Government Consultation with Federally Recognized Indian Tribes and Alaska Native Corporations (November 2013)
Appendix 9-E	RRT3 NAGPRA Plan of Action Checklist [Reserved]
Appendix 9-F	USACE Nationwide Permit (NWP)-20 (December 2017) [Reserved]

Appendix 10: Natural Resource Damage Assessment (NRDA) [Reserved]

[Reserved for addition of appropriate resource document/text]

Appendix 11: (DRAFT) Incident-Specific Region III Regional Response Team III Activation Quick Response Guide [Reserved]

This is a DRAFT document to be reviewed by RRT membership

10 pages

RECORD OF CHANGES FOR REGION III REGIONAL CONTINGENCY PLAN

Date of Revision: November 2019

Section	Change	Comments
3.C	Multi-Area Response	
3.D	Coastal Region III and II, and III and V – edited text for boundary with District 9 in NY along Erie Lake.	
3.E	▪ Reference to DEEP as policy ▪ Surface Washing Agents Policy no longer [RESERVED] ▪ Non-Floating Oils no longer [RESERVED] ▪ Vessel Decontamination…	▪ DEEP removed as appendix and moved to Response Tools webpage ▪ Surface Washing Agents Policy Appendix 7-I posted to RCP webpage ▪ Non-Floating Oils Appendix 7-L5 posted to RCP webpage ▪ added links to webpage?
4.D	Section revised to provide a better description of cross-boundary support and activation of an incident-specific RRT	
Appendix 4	Revised to include link to webpage and added Appendix 4-C	Resources for Jurisdictional Boundary Maps
